GENERAL HISTORY AND REMARKS: Wassermann + Nov. 17-1912. Wassermann Neg. Jan. 1915 Wassermann Neg. March 7 & July 3-1915.

DIED September 14th-1915 at 3.03 p. m. Cause Chronic Parenchymatous Nephritis. Tuberculosis of Lungs & Intestines -

Autopsy held 24 hrs after death. Drs. Emmanuel & Butler, Sept. 15-1915.
Body fairly well nourished - Rigor Mortis, nil; [illegible] coloration at back -
General Edema of entire body. Adipose, moderate.
Thorax. Pericardium contains about an ℥ of clear fluid.
Heart weighs 6 ozs - Color - pale & flabby - Aortic Valves - Injected - Pulmonary V. Injected -
Aorta - normal - Mitral Valve - Normal - Tricuspid Normal -
Lungs - Pleura adherent to parietal pleura -
Right L. Wt. 15 ozs. Scattered throughout with tubercles. Cavity - abt 2 in. in diameter -
Strong old adhesions of whole upper lobe - Peribronchial glands enl. caseous. No fld.
Left L. Weight 15 ℥. Large cavity at apex posterior. Tubercles throughout. Marked old adhesions of entire lung. No fld - Bronchial Glands - hypertrophied. Some caseous -
Abdomen - Liver. Wt. 39 ozs. Capsule strips easily. Cut section oozes blood readily - Consistency med. firm. Negative to Iodine -
Gall-Bladder. Mod. distention - normal - Stomach Mod. distention, otherwise normal -
Spleen, Wt. - 11 ℥s - Hypertrophied. Caps. strips with difficulty. Cuts c̄ moderate resistance, firm - No tubercles -
Pancreas Wt. 4 ozs. Consistency quite firm. Cut section oozes blood. Size, little large. No tubercle -
Kidneys
Right Kidney wt. 4 ozs - Capsule strips easily
Left Kidney. - Weight 6 ozs. Large white. caps strips readily at some places & with difficulty at others - No tubercles - Amyloid degen -
Appendix - normal -
Intestines - T. B. ulcers practically throughout - Mesentery Glands -
Peritoneum - contained free fluid, considerable amt. clear -
Pelvis - Uterus - wt. 4 ozs - Pale - anaemic - Size practically normal
Ovaries & Tubes - Normal - Marked pallor of all organs - pelvic -
Bladder - Normal - Pale -

" Nervous and Mental Phenomena of,
Educational attainments at admission, None.
Locomotion, Very deficient: knock-kneed. , Speech, Absent: deaf and dumb. , Temperament,
Diseases: Measles? Yes, Scarlatina? Yes, Whooping Cough? Yes, Vaccination? No, Epilepsy? Yes. (masked type)
" Hysteria? Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

For a year or more previous to her final illness Hazel was known to have a chronic kidney disease (Bright's). She was in fair health most of the time however. About a month before going to the hospital for the last time she menstruated for several weeks, and at the close of that period was sent to the hospital for treatment. (Feb. 5, 1908) Before this could be instituted she had a severe & alarming attack of pain, dyspnoea, with convulsive twitchings & great restlessness. Following this her kidneys refused to functionate for nearly forty hours but did so after vigorous treatment. Her heart action which was bad just after the attack improved & her kidneys acted fairly well under stimulation. Her heart action soon weakened however, bleeding from the post-nasal fossa & finally from ears & conjunctiva set in and she died Feb. 16, at 12 P.M.

DIED February 16, 1908 of chronic nephritis (Bright's disease). No autopsy.
Remains were interred in California Home Cemetery February 18, in the presence of relatives.

See page 442, book #1.

GENERAL HISTORY AND REMARKS:

On the morning of Nov. 10 Lottie was seen to be a bad color: her face became cyanosed at times and her pulse was feeble. She was thought to be on the verge of a series of convulsions as had been her habit & was sent at once to the hospital. On stimulation her pulse became stronger & she seemed to be much as usual while lying in bed. Her bowels moved both by enema & laxative. She slept well that night and no especial concern was felt for her. In the morning she ate a little breakfast & seemed much brighter though weak. She had had no convulsions since the 7th when she had one, and two on the 4th of November. Between 7:30 & 8 o'clock she passed very quietly & was found dead at 8 A.M. by the nurse in charge.

DIED November 11, 1906. Autopsy Nov. 13. Interred in California Home Cemetery Nov. 13. 1906. her relatives being present.

Autopsy notes: Nov. 12. 1906. 26 hours after death: rigor mortis in lower limbs & moderate in degree. Livores well marked; body well nourished: no tympany. Subcutaneous adipose tissue abundant; muscles flabby but of good size.
Lungs & pleurae - small amount of serous fluid in right pleural cavity. R & Left lung crepitant: areas of hypostatic congestion.
Heart - Pericardium adherent over whole anterior surface & about two-thirds of posterior surface: walls of right ventricle thickened.
Liver large and pale; suggests accumulation of fat, on section.
Spleen confluent; adherent posteriorly.
Pancreas very large and long: adherent is a large tumor towards intestinal end.
Kidneys - Left cortex thin; right same & showing large cyst, three-quarter of an inch in diameter.
Granules like small seeds scattered over peritoneum & omentum.
Small mass size of a bean attached to fimbria of right Fallopian tube.

Microscopic examination - On staining scraping from liver with osmic acid many fat granules cover field; very thick: also material from small seed-like bodies covering peritoneum etc. found to contain many fat cells.

GENERAL HISTORY AND REMARKS:

Under somnoform - ether sequence anaesthesia - a double salpingectomy per laparotomy was performed by Dr. Alice G. Woods - Children's Hospital, San Francisco, Cal. August 12, 1911. The surgeon was assisted by Dr. Julia Larson - former resident physician of Children's Hospital - & staff. The girl made an uneventful recovery: and up to June 1, 1913 - no history of masturbation has been obtained. Her physical condition is good.

6-6-16. Tonsillectomy - Dr. Butler - Dr. Emmelmost anaesthet.

GENERAL HISTORY AND REMARKS:

For the past year or more this child has been subjected to peculiar attacks of lapse of consciousness for a few seconds only whether subject to excitement or even when seated at the table. She would become flushed in the face & would fall if not caught. Her pulse was regular, of fair volume & good tension - sometimes slightly accelerated during these attacks. The last attack she had, occurred last May while seated in a dentist's chair & was having her teeth examined. From all appearances they were petit mal of epilepsy - or beginning epilepsy.

On latter part of June she caught a cold (acute bronchitis & coryza) & was slowly improving under treatment. On August 5 at 4.50 P.M. she was engaged in light dormitory work - & was carrying a bundle of clothing on her arm up to the 3rd floor - evidently 3 flights of stairs had been ascended when, according to the statement of two other inmates who were present, she fell on her face to the cement landing. She expired immediately before an attendant or physician arrived a few minutes later. There was no hemorrhage from nostrils - only a slight one from the mouth caused by abrasion of the mucous membrane of the lips obtained on falling. It was noted that the mobility of the neck was marked probably due to a dislocation of one of the cervical vertebra as was ascertained at the postmortem examination.

Autopsy notes - Held sixteen hours after death.

Body of a well-nourished young woman of 30 years of age. Marks of contusion on face and forehead. Hypostatic congestion visible only upon the back and posterior surface of the arms.

Thorax:- The right pleuritic cavity was full of fibrino-serous exudate which exuded as soon as the knife incised the costal cartilages. A few fresh fibrous bands were found over the middle lobe of this lung: and fresh, firm adhesions were encountered at the apex. Tubercular deposits of considerable extent were distributed in the middle and upper lobes of the right lung. Three small cavities were found in the middle lobe.

The left lung was adherent at the apex by means of fresh adhesions. A small amount of gritty, calcareous deposit of tuberculous character was found at the apex of the left lung.

The pericardium was full of clear, serous fluid which contained no inflammatory exudates. There was a firm organized (ante-mortem) clot in the right auricle reaching into the ventricle. Some old vegetations existed on the edges of the mitral valve. The heart in general was flabby.

Both kidneys showed hypostatic congestion of the cortex and the pyramids.

Liver and spleen healthy.

Examination of the neck disclosed a dislocation of the fourth cervical vertebra to the right side (to an angle of 60°).

Died August 5/1909: Cause of death - pleurisy with effusion due to tuberculosis; and probable epilepsy.
Contributory cause - dislocation of 4th cervical vertebra

Remains shipped to Modesto to parents.

GENERAL HISTORY AND REMARKS: Her father died in 1901 of La grippe, aet. 56 yrs.
P. G. F. unknown
P. G. M. unknown.
M. G. F. died of bronchitis, age not given.
M. G. M. died of consumption " " "

Since her return from her last vacation Mabel was observed to be failing mentally and spasms became somewhat more frequent.
On the night of Dec. 20 she suddenly went into status epilepticus with spasms at intervals of from 3 - 15 minutes. Sedatives were administered and the spasms ceased but she only partially regained consciousness; temperature began to rise. pulse rapid & thready, respiration frequent.
On Dec. 24 she became moribund and died quietly at 11.55 a.m.
No autopsy was held and the remains were sent to relatives in San Francisco.

DIED Dec. 24. 1905. of status epilepticus.

GENERAL HISTORY AND REMARKS: This child's father died of pulmonary tuberculosis, aged 38 years. Her mother died at 44 years, assigned cause, change of life; but "history unknown".

Stunted in growth and frail on admission, Gertrude remained about the same until April 14, 1906 when, developing a fever (105) she entered the hospital. Her temperature during the following five months ranged from 99° to 103°. In September she began to fail more rapidly, anorexia & emaciation became more marked, dullness over both apices was present at the time. A week before death her temperature was subnormal, with a slight rise (100°) just before death. For months she lay quietly & seemed to be in no pain or discomfort. At times bowel evacuations were loose but no diarrhoea at any time. Her condition was considered tuberculous from August 1906.

DIED Sept. 28, 1906. of Miliary tuberculosis

Autopsy Notes. 19 hours after death, Sept. 29, 1906.
Body greatly emaciated; scaphoid abdomen & petechiae; greenish color showing through. Heart very small. Left lung small, pale, adhesions between upper and lower lobes. Apex infiltrated by tubercular tissue, gristly to finger.
Right lung larger: area of infiltration (tubercles) in each lobe; localized patch of pneumonic tissue in upper lobe. Mediastinum full of enlarged glands.
Liver adherent to diaphragm and tubercles sparsely scattered through.
Spleen thoroughly infiltrated with large tubercles.
Kidneys small; cortex thinned.
Mesenteric glands everywhere infiltrated.

Reg. No., 1174, App. No., 793, Admitted, Sept. 27th 1904, Born, July 15th 1892, Birthplace, Los Angeles
Name, Lillian Witherspoon, Color, W., Sex, , Age, 12 years, 2 months, 12 days, Residence, Los Angeles, Co., ,
Parentage: Father living, , Dead, Yes, Occupation, Expressman, Nationality, Scotland, Age at birth of this child, 50,
" Mother " Yes, " , " Housewife, " England, " " " 18,
Blood relationship of Parents, None, Conjugal relation,
Relatives or Ancestors similarly afflicted, None.
" " otherwise afflicted, Mother's father paralyzed. Persistent headache on mother's side.
" " intemperate, Father.
Heriditary influences, Unfavorable.
Labor, Very difficult, Delivery, Non-instrumental, full term.
2d child of Parents. Condition of other childr~~en~~, Sound.
Alleged Cause of Deficiency, Heredity., Date of recognition,
Degree of deficiency at admission, Feeble-minded., Abnormalities, Said to have adenoids.

Physical condition; General development, Very fair, Skin,
Hair, dark brown, dry., Sight, Perfect, Hearing, Good.
Smell, , Taste, , Touch,
Heart action, etc., , Pulse, , Circulation,
Lung action, , Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.

" Hysteria? Cerebro-spinal disease? Yes, in 1884, Chorea? No.
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

P. G. F. no history.
P. G. M. died of old age, at 84.
M. G. F. died of pneumonia, at. 54.
M. G. M. died of heart-clot. at. 74.

For a year previous to her last illness Grizella had difficult digestion & continued to run down in spite of tonics & digestants. At times she improved somewhat but on the whole grew thin & more fretful than usual. On November 12, 1907 she was placed in the hospital & careful diet & treatment instituted. Her lungs & heart were in fair condition & physical examination only revealed a slight but persistent fullness of the liver. She had a regurgitation of bile into the stomach which caused her to reject much of the food swallowed. Examination of stomach contents revealed nothing. She grew very emaciated & though of very low mentality seemed to suffer at times. There was a rise of temperature at the last only. She died quietly on

DIED January 1, 1908 - (chronic gastritis: marasmus). No autopsy was held. Remains were sent to relatives at Downey, California.

Reg. No., 1177, App. No., 805, Admitted, October 8th 1904, Born, January 16th 1885, Birthplace, Nevada City
Name, Grace Hosking, Color, W., Sex, , Age, years, months, days, Residence, Nevada City, Co.,
Parentage: Father living, Yes, Dead, , Occupation, Miner, Nationality, , Age at birth of this child, 38,

Blood relationship of Parents, None, Conjugal relation, Single.
Relatives or Ancestors similarly afflicted, None.
" " otherwise afflicted, Mother of died of tuberculosis.
" " intemperate,
Heriditary influences, Good.
Labor, Ordinary, Delivery, Full term
2d child of Parents. Condition of other children, Strong and sound
Alleged Cause of Deficiency, An attack of diphtheria., Date of recognition,
Degree of deficiency at admission, , Abnormalities,
Physical condition: General development, Good., Skin, very clear.
Hair, dark brown, Sight, Perfect, Hearing, Perfect, Touch,
Smell, , Taste,
Heart action, etc., , Pulse, , Circulation,
Lung action, , Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, , Teeth,
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, about 5th grade.
Locomotion, Normal, Speech, Perfect., Temperament,
Diseases: Measles? Yes., Scarlatina? Yes., Whooping Cough? Yes, Vaccination? unsuccessful, Epilepsy? Yes.
" Hysteria? Diphtheria? Yes. Chorea? No.
Diagnosis of, Epilepsy., Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

P. G. F. died at 70. cause not known.
P. G. M. " at 65, of bronchitis.
M. G. F. " at 59 of paralysis.
M. G. M. " at 75. cause not given.

During November 1906 Grace was observed to be quieter than usual and toward the end of the month had a cold, with a cough which seemed to yield to simple remedies.

On the evening of November 28 she was seen after a coughing spell: she was cyanotic had sudden dyspnoea & seemed weak. On admission to the hospital her temperature was 105, pulse 140, respiration 90. She had a slight chill soon after. The case was diagnosed as lobar pneumonia but the course of the disease proved otherwise, the physical signs soon confirming a diagnosis of tuberculo-broncho-pneumonia. Her pulse soon began to fail, temperature, pulse & respiration remained high for some time; temperature remitted somewhat at times but pulse & respiration remained relatively high to end. Stimulation was more or less necessary constantly. She tolerated nourishment & medication well as a rule. Little material was expectorated owing to lack of intelligence but was thrown off by lungs freely at times. Tubercle bacilli & elastic fibres were found in sputum.
On Dec. 8 there were signs of cavity formation & these increased until probably the whole of the right & part of the left lung were involved. On Dec. 11 she suddenly became cyanotic, pulse was imperceptible & breathing very shallow. The end was expected but under stimulation she rallied quickly.

Dec. 15. a diarrhoea began showing involvement of the intestinal canal.
In spite of full diet containing as much fat as possible & supplemented by cod-liver-oil, bovinine & tonics she failed steadily & died very quietly at 9:30 Jan 9. 1907.

No autopsy was held & body was sent to relatives at Nevada City, California.

DIED. January 9. 1907. Pulmonary Tuberculosis

Reg. No., 1178, App. No., 746, Admitted, October 9th 1904, Born, August 8 1885, Birthplace, Jackson Co., Oregon.
Name, Estella Magness, Color, W., Sex, , Age, 19 years, 2 months, 1 days, Residence, Montague, Co., Siskiyou,

GENERAL HISTORY AND REMARKS: Her father suffered from neuralgic headaches. He died of typhoid pneumonia in his forty-third year, about four years after Helen was born.

DIED, March 27, 1905.

Mar. 25, 1905. The child was taken sick today. Symptoms all obscure other than the fact of fever. 26th. Patient weak and looks very appealingly. Some signs of retraction of the head. After bedtime she grew worse. 27th. Was summoned to patient at 5 A.M., her temperature being then 109° Fahr. and in a state of coma. Her temperature continued to run up until she died at 6:30 A.M. when it was 109.6°; the highest recorded and verified in this Institution.

Autopsy Mar. 28th, 29½ hours after death. No unmistakable lesions found except traces of an old hepatitis, an old spinal meningitis and some fine adhesions between the spinal cord and its dura mater: also some congestion of the left lung anteriorly. The pericardium contained considerable clear serum.

DIED, March 27th 1905, of Spinal meningitis with hyperpyrexia. Buried in Home Cemetery, Eldridge.

GENERAL HISTORY AND REMARKS:

P.G.F. died of an accident, at. 65 years.
P.G.M. " " "fever" at. 48
M.G.F. living.
M.G.M. died of congestion of bowels, at. 45.

On March 5. 1906 Lola was found to have a fever, slight hacking cough. & evidence of a mild bronchitis. She improved for a few days but her condition soon became stationary. Her temperature was variable, with an evening rise. About March 18, symptoms of an auto-toxaemia developed retarding her progress. At this time her fever ran higher - 104+ in evening. and a tuberculous condition was suspected. March 22. her fever abated and she seemed somewhat better with little rise of temperature. March 29 fever again rose & intestinal distress seemed to be present; the child was fretful & restless with temperature high even in morning.
On Apr. 1, signs of pleuritic effusion appeared but other symptoms abated.
On Apr 5. 2 1/2 fl.oz. of serous fluid was withdrawn with little effect on patient.
On Apr. 9. cavity again filled & an emphysematous condition of chest wall was found: incision was made & 21 fl. ʒ of fetid pus evacuated. Child was in a depressed state requiring stimulation.
She rallied somewhat after the operation but soon sank & died at noon on Apr. 10. 1906. DIED
Autopsy was performed & remains sent to relatives at Sanger, California -

Autopsy notes.

Diag. Empyema

M.G.F. + M.G.M. alive.

DIED February 2." 1917 at 9.08 a. m - Cause. Tuberculosis of Intestines. Epilepsy.

Autopsy Feb. 2." 1917 - 2 hrs. after death: Permission given for Autopsy - but not for head -

Pericardium contained small amt. of clear fluid. Heart, weight 8 ozs - Practically all valves normal excepting mitral wh. was thickened.
Rt. Lung 5 ozs. in weight - Adhesions at apex + posterior. Otherwise normal on section.
Lt. Lung 4 zs " " Old tubercle at apex, about to break down. Otherwise normal -

Liver. 32 ozs. Capsule strips easily - Normal on section.
Seventeen small gall stones in gall bladder.
Rt. Kidney weight 2 zs. Capsule strips easily - Normal on section.
Lt. " " " " " " " . Firmer than rt. prob. interstitial nephritis.
Spleen weight 4 zs. Normal

Appendix - adhered retro-caecal -

T.B. ulcers throughout small + large intestines.
Ovaries. large, white + sclerotic - Cuts like cartilage. Uterus, nulliparous
Bladder m. m. thickened - Trigone, looks injected.

Autopsy see Protocol #42 - Book 3.

Diseases: Measles? Yes, at 7 yrs., Scarlatina? No., Whooping Cough? No., Vaccination? Yes. 7 yrs., Epilepsy? Yes.
" Hysteria? , Chorea? No.
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

P.G.F. of "fever" at. 30.
P.G.M. died of rheumatic endocarditis, at. 66.
M.G.F. & M.G.M. living.

On March 15/09 she was sent to the hospital on account of a hectic temperature – night sweats, some cough & loss in weight. A diagnosis of pulmonary tuberculosis in the incipient stages was made & she was treated accordingly. A liberal diet – rest & living outdoors – small doses (increasing weekly) of creosote was given & the latter was gradually discontinued as her cough disappeared. She gained in weight – appetite improved somewhat – but temperature & night sweats persisted in spite of phenacetin & antipyretics given. After an examination of chest which revealed harsh i.e. accentuated breath sounds at apex of right lung – & slightly at left lung below supraclavicular space. She was given the Moro's diagnostic skin test with tuberculin ointment. The upper left arm was inoculated October 2/09 but no reaction followed.

February 13/10 She was sent to hospital on account of hectic fever – cough: on examination rough breathing & rales at both apices: consolidation on left side posteriorly. Fever running 101 to 102° F. at 5 P.M. daily:
March 12/10 cough less severe: but temperature 101^2–101^6 daily: night sweats: no expectoration

DIED September 9, 1910. Remains buried in Home Cemetery.
Cause of death – tuberculous pneumonia – contributory epilepsy.

GENERAL HISTORY AND REMARKS:

P.G.F. died from accident; age not given.
P.G.M. died of "old age". years not given.
M.G.F. living.
M.G.M. died of "general breakdown": age not given.

After a prodromal period during which it was observed that Nettie had lost playfulness and appetite the child was found to be definitely ill Feb. 22d 1906. Feb. 23d. Patient put to bed; she has coughed, at times for some days and seems to be losing flesh. Temperature of 10 . but no signs of pneumonia nor pleurisy. 27th. Cough little, but fever higher. 28th. A little better. Temperature about 3° lower. Mar. 1st. Child very cross; cough little. The symptoms point to tuberculosis. Mar. 2d. Acute miliary tuberculosis diagnosticated. Mar. 5th. No change. Temperature continues to range high, and the child is beginning to lose flesh. Mar. 6th. Growing worse; strength and flesh failing. Mar. 7th. Patient seems a little brighter. Mar. 9th. Patient growing worse. Temperature above 105° F. and child becoming stuporous though capable of being roused. Mar. 10th. She is very apathetic, and falling into a typhoid condition. There are signs of a lobular pneumonia in the left lung. Mar. 11th. Nettie is growing gradually weaker and will probably not survive long. Mar. 12th. Patient this morning appeared a little brighter and could be easily roused and the attention held a short time. The pulse is very feeble and muscular weakness evident. She exhibits uncertain muscular movements. In the afternoon she was worse and it was clear that the end was approaching. She continued to fail and died at 1:15 A.M. March 13th.

Autopsy fifteen hours after death, the thorax and abdomen only being investigated. Body but slightly emaciated and musculature in general good. Rigor mortis has just set in. Livores or hypostatic congestion are little marked.
The pericardium was quite full of clear, serous fluid; the valves of the heart healthy. The heart was rather small in size and pale in color and the ventricles rather thin-walled. The right lung showed some hypostatic congestion at the base and the left some remains of lobular pneumonia. The lungs were both crowded with miliary tubercles and one bronchial gland was much enlarged and filled full of caseous material.
The liver was dotted here and there with miliary tubercles but very few were to be discerned in the parenchyma
The spleen was set thick with miliary tubercles throughout. The kidneys were only congested.
The intestines showed no signs of typhoid and were but little beset with tubercles anywhere. The mesenteric glands were somewhat infiltrated, but did not appear tuberculous. The appendix vermiformis had a mesentery two thirds of its length.

DIED March 13th 1906 of Acute miliary tuberculosis. Buried in Home Cemetery, Eldridge.

Reg. No., 1219, App. No., 955, Admitted, August 15th 1905, Born, March 13 1870, Birthplace, Mercer Co. Illinois.

GENERAL HISTORY AND REMARKS:

P.G.F. dead, at. 75 Cause not given.
P.G.M. " " 80. " " "
M.G.F. " " 80. " " "
M.G.M. " " 75 " " "

When this patient entered she was very corpulent weighing 291 lbs. On Sept. 8th treatment for this condition was begun (after the plan of Prof. Waugh). Her weight was then 294 lbs. The effect was immediate and for a month she averaged a pound a day loss of weight. Oct. 11th. Patient has lost appetite. 12th. Complains of sickness all over. Oct. 13th. While going up-stairs from supper she fell on the stair-way and died.

DIED, Oct. 13th 1905. of Apoplexy? (or Fatty Degeneration of Heart) Body sent to Lemoore, Cal. to her brother.

GENERAL HISTORY AND REMARKS:

P.G.F. died at. 66: from "torpid liver".
P.G.M. died at. 66 from apoplexy.
M.G.F. living.
M.G.M. died from childbirth at. 27.

On December 19/08 she had an attack of chickenpox: no complications. On March 1/09 she had an attack of measles.

On May 26/09 she was sent to the hospital on account of a high temperature - some bronchitis. A diagnosis of possible pneumonia was made. The temperature persisted and the question of pulmonary tuberculosis arose. Rales were heard at the apices & slightly roughened breathing. The temperature ranging from 99° to 102° F at PM. On October 2/09 after another physical examination was made revealing only harsh breath sounds at the apices & anteriorly on left side in 2-3rd interspaces. - She was given the Moro's diagnostic tuberculin test. The upper left arm was inoculated with Tuberculin Ointment - but no reaction occurred. Discharged from hospital November /09. apparently well - temperature normal.

Aug. 28-1914. At a little after midnight she was found apparently not well, temperature taken and found to be 104°, shortly afterwards she vomited. S.S. enema was given at once, also stimulants. At 7³⁰ a.m. was sent to hospital, pulse not [illegible], on reaching hospital stronger stimulants were administered, but had no effects on pulse. There was dullness of left side more posteriorly, also some distant râles. Diagnosis of Pneumonia made before sending to hospital. At 11⁰⁰ a.m. she was noticed in worse condition, and failed to respond to stimulants again, and died 10 minutes later (11¹⁰ a.m.)

DIED Aug. 28-1914 Lobar Pneumonia - Chronic Endocarditis -
(Buried in Home Cemetery)

Autopsy held 28 hours after death (Aug. 29-1914)
Body fairly well nourished.
Rigor Mortis - Marked (Partial) Discoloration of entire body & limbs.
On opening abdomen and chest nothing unusual presented itself.
Lungs:
Right - Weight ℥15. Old adhesions at apex, also at base of upper lobe posteriorly, extensive adhesions. Lower lobe & portion of upper a beginning pneumonia or hypostatic. Floats in water
Left - Weight ℥16. Old adhesions the entire surface of left lung. (Very firm)
Consolidation at base of lower lobe - sinks in water.
Glands - Bronchial gland size of hazelnut, not broken down.
Heart - Weight ℥9. Stopped in systole. ~~Musculature apparently normal.~~
Clots (organized) in both ventricles (more in right) Clot very pale - no bleeding on section.
Mitral valve - showed old vegetation.
Aortic - small vegetation on one valve.
Liver - Weight ℥40. Cut with slight resistance. Bleeds freely on section - Capsule strips ~~c̄ ease - otherwise normal.~~
Spleen - Weight ℥6½ - considerably elongated & bound down posteriorly by firm adhesions.
Consistency very soft - formed drop from finger tips
Kidneys - Weight together ℥7.
Right - Pyramids prominent - cortex slightly thinned - slight congestion - otherwise normal. Capsule strips c̄ ease.
Left - Pyramids less prominent - cortex ~~thinner~~ than of right - Capsule strips fairly easy - Capsules strips fairly easy. Otherwise normal.
Stomach and Intestines normal.
Uterus - Fundus slightly congested - cervix - ~~internal and external os~~ & canal quite open. ~~Ovaries~~ normal.
Brain - Weight ℥36. Adhesions of duramater ~~to longitudinal~~ fissure on either side at parietal lobes
Slight general injection of entire brain
On section - nothing unusual found.

Parentage: Father living, - *, Dead,* Yes *, Occupation, , Nationality,* U.S.A. (Tenn.) *, Age at birth of this child, ,*
" Mother " Yes. *, " , " , "* U.S.A. (Tenn) *, " " "* 29 *,*
Blood relationship of Parents, None. *, Conjugal relation,* Single.
Relatives or Ancestors similarly afflicted, None.
" " otherwise afflicted,
" " intemperate, None.
Heriditary influences, seemingly good.
Labor, Ordinary *, Delivery,* Full term.
4th *child of Parents. Condition of other children,* Sound in body and mind.
Alleged Cause of Deficiency, An accidental fall. *, Date of recognition,* At eight years of age.
Degree of deficiency at admission, Imbecile *, Abnormalities,* Lower extremities paralyzed and undersized

Physical condition: General development, Well grown (except lower extremities). *, Skin,* Very clear and fair.
Hair, Auburn, coarse and wavy. *, Sight,* Good *, Hearing,* Good.
Smell, , Taste, , Touch,
Heart action, etc., , Pulse, , Circulation,
Lung action, , Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, , Teeth,
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, Can count ten; and add 2+2. 3+3.
Locomotion, Absent. *, Speech,* Slow and labored. *, Temperament,* Sanguine.
Diseases: Measles? No. *, Scarlatina?* No. *, Whooping Cough?* No *, Vaccination?* No. *, Epilepsy?* No.
" Hysteria? No. *, Chorea?* No.
Diagnosis of, Paralytic and imbecile. *, Examiner, as to grade, complications, etc,* The application-blank of this girl furnishes no information as to the time when Georgia was paralyzed nor whether the cause was a traumatism or disease. It does however record that she began to walk at the age of twelve months; and that she had a fall in infancy while the mental defect was first noticed at the age of eight years.

GENERAL HISTORY AND REMARKS:
No information given as to the grandparents.

After admission to the Home it was observed that Georgia was subject to fits of petulance and sometimes to throwing away her food or spitting it out. Her physical health remained good until March 21st 1906. when she complained of some intestinal pain and there was a slight rise in temperature. A laxative removed all the symptoms and she was well to all appearance for the next two days. She remained in bed on the 23d however because of the bad weather prevailing. At 2 p.m., this day, her temperature was normal being 99.2° Fahr, per rectum. At 4:15 p.m., when offered food, she became vexed and when urged to take it threw it against the wall. At 5 p.m. her temperature was found to be 106.4° F.: at 6:30 it was 106.8° F. and at midnight 103.4°. After seven she quieted and slept well. At 1:30 A.M. she awoke and the night nurse saw at once that something was wrong. There was labored breathing, but full, and no pulse at the wrist. The interne and resident physician were both summoned and remained with her until 4:15 A.M. Respiration was at the rate of 42 per minute but full and free; it was almost impossible to hear any pulsations of the heart by the stethoscope. While active medication by aromatic ammonia and hypodermics of strychnin and nitroglycerin was resorted to it was clear that absorption was suspended. The feet and legs began to grow cold while respiration was laborious. Suddenly it ceased at 5:20. The body was observed to keep quite warm for several hours.

Autopsy 29½ hours after death. The body is well nourished; it shows some hypostatic markings all over the back and loins. The mark of a small burn is present over the lower end of the sternum. No rigor mortis present. Both lungs were found to be normal with some hypostatic congestion. The pericardium was filled with clear amber-colored serous fluid. The heart was large in size for a girl of her age. The right auricle was dilated. The valves were sound. A fibrinous clot was found in the pulmonary artery. No signs of aneurysm were discerned in the aorta.
The liver was of normal size and color; as also the stomach. Intestines were normal. Kidneys apparently normal. The ovaries were shrunken and each containing two small cysts. The broad ligaments appeared congested
The spleen was quite large, nearly double the average size and its Malpighian corpuscles stood out with vivid distinctness.

DIED Mar. 24-1906 Status Lymphaticus. (Home Cemetery)

Reg. No., 1230 *, App. No.,* 866 *, Admitted,* October 1st 1905 *, Born,* August 21st 1899 *, Birthplace,* Saint Pierre, Martinique

" Hysteria? , Chorea? No
Diagnosis of, Idiocy with paraplegia., Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

G.G.F. died of "stomach trouble", age 74.
The other grandparents are all living.

She developed a spinal abscess in dorsal region during summer of 1909:- & had one in mammary region which began to heal as the one in the dorsal region appeared. The latter refused to heal until a Bismuth Paste was tried - the first injection being given November 15/09:- & at the time of her death this abscess became to fill up & was almost healed. During October/1909 she developed another abscess in sacrum - & this also began to heal under the injection of the Bismuth Paste - [reference - history of Hazel Myrick - No. 1462]. A diagnostic test (Moro's skin reaction) - with tuberculin was tried - & she gave a slight reaction -

DIED December 12-'09. Diagnosis - pulmonary tuberculosis - contributory cause - spinal tuberculosis & epilepsy.
- She was buried in Home Cemetery.

Reg. No., 1233, App. No., 823, Admitted, October 6th 1905, Born, December 18th 1899, Birthplace, San Francisco

GENERAL HISTORY AND REMARKS:

P. G. F. Died at age of 89 - of paralysis.
P. G. M. Living at 80 years.
M. G. F. " " " "
M. G. M. Died when young: soon after child-birth (of 2nd):

Admitted to C. H. F. M. C. at Eldridge Aug 26. 1898 -
Discharged - Feb. 19. 1900
Re-admitted - as above.

Edith failed both physically & mentally from the date of her re-admission - Oct. 31, 1905. During the last year of her life she was erotic much of the time & looked ill at times. She usually responded to tonics &c. On Jan. 8, ('08) after a series of spasms she had a bad attack of post-epileptic mania which was difficult to over-come. Quiet was finally obtained but her heart was much enfeebled & she died suddenly Jany 16. after what might have been a spasm as she was cyanosed & unconscious with failing heart-action.—

DIED January 16. 1908. post-epileptic mania. Remains buried in Home Cemetery father having pres

CASE BOOK **Institution for Feeble-Minded, Eldridge, Cal.** FEMALES

Reg. No., 1240, App. No., 946, Admitted, Nov. 9. 1905, Born, December 1883, Birthplace, Santa Rosa, California.
Name, Lelia Wallace, Color, White, Sex, , Age, 21 years, 11 months, – days, Residence, Santa Rosa, Co., Sonoma,
Parentage: Father living, yes, Dead, , Occupation, carpenter, Nationality, American, Age at birth of this child, 38,
" Mother " , " yes, " housewife and dressmaker, " " , " " " 37,
Blood relationship of Parents, None, Conjugal relation, Single.
Relatives or Ancestors similarly afflicted, No
" " otherwise afflicted, No
" " intemperate, No
Heriditary influences, None
Labor, difficult, Delivery, Normal: at term.
2nd child of Parents. Condition of other children, normal
Alleged Cause of Deficiency, Death of Mother over which she grieved greatly., Date of recognition, 4 years ago.
Degree of deficiency at admission, Memory somewhat defective;, Abnormalities, None

Physical condition: General development, slight in figure:, Skin, trichophytosis; otherwise normal.
Hair, brown., Sight, normal, Hearing, normal.
Smell, , Taste, , Touch,
Heart action, etc., , Pulse, , Circulation,
Lung action, , Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, , Teeth,
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, Relation to epileptic fits. First menstruated at what age?
" Nervous and Mental Phenomena of, Fits said to occur before and after period, those after being the more severe.
Educational attainments at admission, Reads, writes, ciphers: was in High School when attacks first came on.
Locomotion, Normal, Speech, , Temperament,
Diseases: Measles? Yes, 5 yrs. ago, Scarlatina? No, Whooping Cough? Yes, 7 yrs ago., Vaccination? Yes., Epilepsy? Yes,
" Hysteria? , Chorea?
Diagnosis of, Epilepsy, Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

P. G. F.
P. G. M.
M. G. F.
} All dead; cause unknown.
M. G. M. Dead: cause "fever".

Nov. 11. 1905.
On evening of day of admission seemed dazed; did not sleep well: next day developed slight mania, with hallucinations: 2nd night raved but was not violent; sleep after large dose of hypnotic. Next day weak & pale but more normal in manner.

During winter of 1906-7 Lelia had several heavy colds from which she recovered but always needed tonic treatment for some time. At times too she grew weak & a bad color with no apparent cause not responding to tonics. In June she developed fever, rales with prolonged expirations in left lung: before her death right lung became involved. Dyspnoea, cyanosis, rapid heart action, with a systolic murmur were present pointing to heart lesion (mitral) complicating phthisis. The infection was a severe one, fever mounting to 106 on one occasion & was continuous. In spite of treat. life, night & day, forced feeding being impossible owing to state of digestive organs, she failed rapidly & passed away very quietly at 2:30 am.

DIED July 27, 1907 of pulmonary tuberculosis) Remains interred in Home Cemetery, July 29, 1907, relatives being present.

Reg. No., 1242 , App. No., 942 , Admitted, November 26th 1905 , Born, October 2d 1891 , Birthplace, Frazier Valley, Cal.
Name, Margaret Lee Burns , Color, W , Sex, , Age, 14 years, 1 months, 24 days, Residence, Lindsay , Co., Tulare ,
Parentage: Father living, Yes , Dead, , Occupation, Farmer , Nationality, U.S.A. (Tenn.) , Age at birth of this child, 65 ,
" Mother " Yes , " , " Housewife , " U.S.A. (Mo.) , " " " 45. ,
Blood relationship of Parents, None. , Conjugal relation,
Relatives or Ancestors similarly afflicted, None
" " otherwise afflicted, Mother had scrofula
" " intemperate, None.
Heriditary influences, Unfavorable, on the whole.
Labor, Ordinary , Delivery, Full term.
Twelfth child of Parents. Condition of other children, Sound in mind and body.
Alleged Cause of Deficiency, Scarlet fever , Date of recognition, At two years.
Degree of deficiency at admission, , Abnormalities,

Physical condition: General development, , Skin,
Hair, Brown , Sight, Good , Hearing, Perfect.
Smell, , Taste, , Touch,
Heart action, etc., , Pulse, , Circulation,
Lung action, , Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, , Teeth,
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, Can count to ten, but can not read.
Locomotion, Has to be helped up and down stairs. , Speech, Indistinct articulation , Temperament,
Diseases: Measles? No. , Scarlatina? Yes. , Whooping Cough? Yes , Vaccination? No. , Epilepsy? No.
" Hysteria? , Chorea? No.
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:
P.G.F. died of pneumonia, age not given.
P.G.M. died in childbirth " " "
M.G.F. died of rheumatism and heart disease, age 75.
M.G.M. " " "old age".

DIED October 27, 1908 – while out on parole.

Reg. No., 1243 , App. No., 1006 , Admitted, Dec. 31. 1905 , Born, June 30. 1893 , Birthplace, Rosedale, L.A. Co. Calif.
Name, Bernice Eldora Ferrine , Color, white , Sex, female , Age, 12 years, 6 months, 1 days, Residence, County Hospital, L.A., Co., California. ,
Parentage: Father living, , Dead, yes , Occupation, laborer , Nationality, American , Age at birth of this child, 80 ,
" Mother " yes , " , " housewife , " " , " " " 41. ,
Blood relationship of Parents, none , Conjugal relation,
Relatives or Ancestors similarly afflicted, Both parents said to be defective mentally.
" " otherwise afflicted, Mother's sister unsound mentally: Two of father's brothers had epilepsy.
" " intemperate,
Heriditary influences, Unfavorable
Labor, difficult; false labor pains 2 mos. before child was born. , Delivery, non-instrumental.
9th child of Parents. Condition of other children, five living normal so far as known; 2 died in infancy: 1 drowned at age of 8.
Alleged Cause of Deficiency, Age of father: mental condition of both parents. , Date of recognition, Abnormal from birth.
Degree of deficiency at admission, Memory fair: imitation good: imbecile , Abnormalities, right breast larger than left: slight lordosis to right.
Physical condition: General development, Fair: sound physically , Skin, good.
Hair, brown. , Sight, ptosis of both eyelids. , Hearing,
Smell, , Taste, , Touch,
Heart action, etc., OK , Pulse, 74 - OK, , Circulation,
Lung action, OK , Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, slightly coated , Teeth, fair.
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, Can count to 30; learns songs & hymns; color & form sense good: can obey commands.
Locomotion, good , Speech, good , Temperament,
Diseases: Measles? yes, at 6 yrs. , Scarlatina? No , Whooping Cough? No , Vaccination? No , Epilepsy? No
" Hysteria? , Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:
P. G. F. Died of old age at 80 yrs.
P. G. M. " " " " " " "
M. G. F. " " nephritis at 84 "
M. G. M. " " old age " 72 "

DIED June 2nd - 1917 @ 6.50 a.m. - Diagnosis. Double Lobar Pneumonia, Epilepsy. Persistent Thymus Gland.

June 3rd - Autopsy 16 hrs. after death -
Body female, well nourished. Livores mortis marked. Rigor mortis moderate.
Brain. wt. 42 ozs. Fair amt. of gray matter. Convolutions shallow. Oedema & congestion present - Dura much thickened.
Rt. Lung 32 ozs. In stage of red hepatization. Oedema present. Adhesions up. lobes fresh.
Lt. Lung 32 ozs. " " anterior: abt 90 cc. straw colored fluid in pleural cavity "
Heart. wt. 10 oz. Rt. side filled c̄ clots of blood - Left side contained clots also. Mitral valve greatly thickened.
Liver 36 ozs - Caps. strips c̄ tissue adherent - Cuts fibrous. G.B. - normal.
Spleen 4 ozs. Lobulated - Caps. takes tissue c̄ it when stripped. Cuts fibrous
Rt. Kid 2 ozs - Caps. greatly thickened. Strips readily. Cortex wanting. Chronic Interstitial Neph.
Lt. Kid " " " " " " " " " " "
Pancreas ½ oz. Hemorrhagic.
Appendix Curled in self normal. Large & Small Intestines, normal.
Uterus. Fibrous. Ovaries - Cystic esp. left. Tubes, normal.
Bladder. Thickened m. m. - Congested - Pus at base.

GENERAL HISTORY AND REMARKS:

P. G. F. Died at 73 of valvular heart disease.
P. G. M. " " 78 " old age
M. G. F. " " 63 " apoplexy
M. G. M. Living, age 69.

Patient is said to have from one to five spasms a day; at times twenty in a day.

This girl's medical history is a remarkable one as given by her parents and observed here. The mother was nervous during the pregnancy with this child due to agonizing circumstances. The child when born weighed very little (there is no record of the exact weight). She was fed by the bottle on condensed milk. The first spasm occurred when the child was three months of age and was a minor seizure (petit mal). The food was now changed and no further spasm took place until the child was two years old; this one was of a more decided character. There were no more until she was three years of age; then she began falling suddenly. During this period (2 to 3) she was the subject of a rash thought to be scarlet fever. During this fever there were no spasms and for several months afterwards no falling spells. These returned later and bromides were exhibited in mild doses. So matters went for about six months. When she was about four, the first major convulsion (grand mal) occurred during sleep; it was typical in character. Now over the space of about eighteen months she went to bed and for four months declined, lost flesh, speech and seemingly all intelligence. She even devoured clothing etc., and it was difficult to nourish her. When she began to improve indiscretions in diet gave her a backset. In one month's time the power of speech was restored; gradual improvement took place and finally she grew fat, became garrulous and was well. In about a year's time she began gradually to decline again to the point of being emaciated but was up and around except for two weeks which she spent in bed. For one week she had hourly spasms and took practically no nourishment. She was given up but began to improve and nourishment was carefully increased. She now kept well but did not grow fat as before though her intelligence increased yet at a slower rate. In another year there was again a gradual decline and while up she lost control of the bowels and bladder. There was emaciation and malaise as before. This lasted nine months followed by a quick recovery in intellect and body. Seven weeks afterward she was brought to this Institution. During all her illnesses she passed much mucus and at one time a worm supposed to be a round worm. At all times she complained of pain in the bowels and sometimes in the limbs. She always ate heartily and though not greedy in manner never seemed to be satisfied; and talked constantly of things to eat. She usually slept quietly and well and seldom ground her teeth.

DIED July 10, 1908. Cause – epilepsy: Buried in Home Cemetery.

Reg. No., 1282 *App. No.,* 970 *, Admitted,* April 10. 1906 *, Born,* About June 1. 1903 *, Birthplace,* unknown

Heart action, etc., Pulse, Circulation,
Lung action, Respiration per m., Chest mea. inspr., in., expir., in., expan., in.
Tongue, Teeth,
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, reads & writes a very little: knows colors: can commit simple songs: imitates well.
Locomotion, Nearly normal; a little swing on r. side, Speech, Normal, Temperament,
Diseases: Measles? No, Scarlatina? no, Whooping Cough? no, Vaccination? yes, at 4 yrs., Epilepsy? yes, about 9 years.
" Hysteria?, Chorea? No.
Diagnosis of, Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Father died of pulmonary consumption at age of 41 yrs 11 mos
P. G. F. Died at age of 84 of rheumatism
P. G. M.
M. G. F.
M. G. M. } All living.

Helen began to talk at 18 months and to walk four months later. She had a convulsion when about two weeks old, but the epilepsy began, apparently, after a fall which she sustained when two years old. May 1897. (First hard spasm June 6th 1897. The second spasm occurred at 2 yrs. & 10 mos (or seven months later) and the third at 4 yrs & 11 mos, "when she was half paralyzed and the trouble seemed to become deep-seated."
July 18. 1907. She had an attack of German measles [Rötheln]:

Feb. 19, 1913. Series of spasms began and continued to grow more frequent till death occurred Feb. 20 - '13.

DIED Feb. 20, 1913. Status epilepticus.

DIED DIED. Diagnosis. Chronic Mitral Insufficiency of Heart. Fatty Degeneration of Heart. Persistent Thymus Gland. October 31st - 1910. 6 35 a. m.

Autopsy Oct 31-1910. Held 9 hrs. after death. Rigor Mortis not marked. Livoris Mortis in dependent portions of body. Panniculus Adiposis well developed & of normal color. Thymus Gland Persistent.

Heart weight 6 oz. On section mid. cusp of aortic valve thickened - Mitral valve thickened. Heart muscle yellowish in color. Stained yellow c̄ Sudan iii.

Left Lung: weight 8 ozs. Brown stained fluid in the bronchioles. Congested throughout -

Right Lung: weight 9½ ozs. Congested throughout.

Liver. weight 32 ozs. Pasty yellow in color. Throughout necrotic areas exist. Capsule adherent & thickened & & pulls pieces of Liver substance upon stripping. Sudan ~~iii~~ changes to a Canary yellow = Fatty Degeneration.

Spleen, weight 1¼ ozs. On section, congested - Fetal lobulation persistent -

Pancreas " 3 ozs. In tail is a seemingly fluid duct, calibre of a straw, brown in color.

Uterus. Atrophic. Ovaries, not found -

Bladder - Empty & normal -

Left Kidney. weight iiss ozs. Yellowish color of cortex, rather pale. Stains yellow c̄ Sudan iii

Right Kidney. weight iiss ozs. Same as left -

Intestines. Calibre of Colon below par. Localized ecchymotic spots in small intestines. Several Peyer's patches of ileum are thickened. Appendix, normal -

Stomach Moderately distended with gas - Normal otherwise -

(Body Shipped to St. Helena, California.

Head. Half thick
Brain - Skull cap thick - Dura adherent along longitudinal fissure - Grey & white
matter well distributed - Convolutions not well marked -
Brain matter oedematous - Left Cerebellum - a marked fissure - Weight 36 ozs
- la slightly softened - On section - cortex injected - Pons & Medulla
injection existed. - In fact marked
Scalp thick. Diploeal veins engorged a trifle. Increase of fluid in subarachnoid spaces. Pia engorged.
Calvarium - fossa for rt. hemisphere deeper than left. Skull cap bluish color on inside due to engorge-
-ment of diploic veins. Bld. fluid in sinuses. Brain cortex engorged. Brain wt. Convolutions
not well marked nor complex - Pons & Medulla soft - Depression on inf. surf. of lt. hemisphere,

GENERAL HISTORY AND REMARKS:
The history of this girl is meagre. - At age of six she was placed in Fred Finch Orphanage, Alameda Co: since when she has been in Salvation Army Home at Beulah; for six months and at Baptist College Oakland for one month. Since then she has been placed with three families. Complaining of pain etc. in pelvic region she was taken to Dr. S. J. Fenton who advised radical operation & last Spring (1906) ovaries & tubes were removed. - She made an uninterrupted recovery. On admission to the institution she was found to be in excellent general health. She had however a discharge from the genital region, and complains of pain on exertion: on examination cervix and vagina were found to be inflamed. -

Paroled Sept. 27, 1907, in charge of Miss Whitney of Oakland office, Associated Charities. -
Returned at Dr. Hatch's request - Mch. 30, 1908: in good physical condition.
Transferred - December 27, 1909 to Ukiah State Hospital

Reg. No., 1308, App. No., , Admitted, Sept. 28, 1906, Born, Jan 28. 1872, Birthplace, Modoc Co: California.

Name, Lucy L. Ewing., Color, white, Sex, female, Age, 34 years, 8 months, days, Residence, Rutherford, Co., Napa Co.,

Parentage: Father ~~living~~, yes, Dead, ~~yes~~, Occupation, farmer, Nationality, American, Age at birth of this child, 32,

" Mother " , " " , " housewife , " " , " " " 18,

Blood relationship of Parents, none., Conjugal relation,

Relatives or Ancestors similarly afflicted, "

" " otherwise afflicted, "

" " intemperate, "

Heriditary influences,

Labor, ordinary, Delivery, at term: no instruments used.

1st child of Parents. Condition of other children, normal

Alleged Cause of Deficiency, possibly a dose of laudanum given at age of three weeks -, Date of recognition, from early infancy.

Degree of deficiency at admission, , Abnormalities, no peculiarities.

Physical condition: General development, good -, Skin,

Hair, , Sight, , Hearing,

Smell, , Taste, , Touch,

Heart action, etc., , Pulse, , Circulation,

Lung action, , Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.

Tongue, , Teeth,

Menstruation: Regular? Irregular? Scanty?

" Painful? Peculiarities of, First menstruated at what age?

" Nervous and Mental Phenomena of,

Educational attainments at admission,

Locomotion, , Speech, , Temperament,

Diseases: Measles? at 7 -, Scarlatina?, Whooping Cough? at 12., Vaccination?, Epilepsy?

" Hysteria?, Chorea?

Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

As a child was late in talking (4 years). is said to have had a convulsion soon after birth.
Maternal grandmother said to have died of carcinoma of stomach at age of 50.

Reg. No., 1309 App. No., 1096, Admitted, Oct. 5. 1906, Born, Aug. 19. 1889, Birthplace, Wyandotte, Kansas.
Name, Cecil Lola Davis., Color, White, Sex, female, Age, 17 years, 1 months, 16 days, Residence, County Hospital, Co., Los Angeles,
Parentage: Father living, yes, ~~Dead~~, Occupation, book-keeper, Nationality, ?, Age at birth of this child, 26;
" Mother ", " yes, " employed in factory etc., " American, " " " 21.;
Blood relationship of Parents, none, Conjugal relation, single
Relatives or Ancestors similarly afflicted, "
" " otherwise afflicted, none so far as known.
" " intemperate, " " " " " Maternal grandfather used liquor - Father supposed to use opium
Heriditary influences, Not the best.
Labor, no history, Delivery, no history.
1st child of Parents. Condition of other children, normal.
Alleged Cause of Deficiency, Injury to head during a fall in elevator 5 years before admission., Date of recognition,
Degree of deficiency at admission, Epilepsy & F.m.?, Abnormalities, Left hand gone; see below.

Physical condition: General development, well-built., Skin, O.K.
Hair, O.K. Brown, Sight, O.K., Hearing, Normal.
Smell, normal, Taste, normal, Touch, normal.
Heart action, etc., O.K., Pulse, 96 - O.K., Circulation,
Lung action, O.K., Respiration per m., Chest mea. inspr., in., expir., in., expan., in.
Tongue, O.K., Teeth, O.K.
Menstruation: Regular? Regular Irregular? no Scanty? no
" Painful? no Peculiarities of, no First menstruated at what age?
" Nervous and Mental Phenomena of, no
Educational attainments at admission, Reached 5th grade at age of 11 or 12 years. Reads well ordinary books - used good grammar
Locomotion, normal, Speech, Slow & well formed sentences., Temperament, Very even & nice disposition
Diseases: Measles? yes, Scarlatina? no, Whooping Cough? yes, Vaccination? at 6, Epilepsy? last 4 years. [6 months after injury to head
" Hysteria? no, Chorea? no
Diagnosis of, epilepsy -, Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

History is not full - Her mother died of pulmonary tuberculosis (age 37); father living but little known of him. Is said to have been above the average before epileptic attacks began. While at Sisters Hospital her left hand was caught in a mangle during an spasm and amputation at the wrist was necessary. Slight facial paralysis on side.

P.G.F. - Living
P.G.M. - unknown
M.G.F. - Living
M.G.M. - Dead Age 47 - Typhoid fever

Maternal great grandfather died of tuberculosis of lungs

Sept. 22-1914 Was admitted to tubercular hospital with Tuberculosis of lungs. Had been expectorating blood (2 different times). Physical examination showed considerable dullness over apex of left lung anteriorly, & rales over considerable area. Physical condition at that time was very good and remained so until she died. Was the very picture of health in every way. Microscopical exam. Positive.

Nov. 18-1914. Spasms assumed the Status type after having a series of 4 or 5 a day for last 2 or 3 days. From Nov. 18th 7 a.m. until she died 50 hours later she had 91 spasms, was not conscious at any time. Temp. rose to 105° about 1 hour before death. Antispasmodics, cathartics, enemas etc. were of no avail. Used hypertonic salt sol. on the morning of Nov. 20th (400 c.c.) but seemed to have no results, raised temp. about 1½°. Heart grew weaker & weaker even though it was well supported. Spasms averaged about every 20 to 30 minutes.

(N.B.) Had never had any gall-bladder symptoms.

Pathological diagnosis
1. Tuberculosis of lungs
2. Abscess of lung.
3. Cholelithiasis
4. Cysts of broad ligament

Clinical diagnosis - Epilepsy & tuberculosis of lungs.

DIED Nov. 20-1914 - Status Epilepticus - Tuberculosis of lungs (Contributory)

Autopsy held Nov. 21-1914. (22 hours after death.)
Findings. Physical condition & contour of the very best (No emaciation whatso-ever)
Rigor Mortis, Marked - Discoloration of back, neck & sides - on opening abdomen nothing unusual noted, except adipose from Sternum to pubes about 3/4 to 7/8 inches thick
Head - Nothing unusual in size & shape.
Brain - Weight - ℥47. - Skull cap showed 4 marked depressions on either side of sagittal suture, anteriorly c̄ slight adhesions of dura to same. - Dura mater moderately congested.
Convolutions about normal - Entire brain surface considerably injected, but no lymph present. - Dissection normal.
Heart - Weight ℥8. - Organized clot in right ventricle - otherwise normal, valves & all.
Lungs - (Left) Weight ℥12. Firm adhesions over entire surface. (Tore in removing adhesions were so firm)
Abscess at apex (anteriorly) 3 inches long, 2 wide & 1 deep. - Large tubercles thru entire lung.
(Right) Old adhesions at apex. Tubercles scattered thru entire lung, especially so at apex. Apex showed an old scar.
Bronchial glands. Slightly enlarged.
Liver - Weight 38 ℥. Consistency soft & friable & capsule strips fairly easy.
Spleen - Weight ℥6. Soft & friable. Capsule strips easily - otherwise normal.
Kidneys - Weight ℥8 Left larger than right, and shows acute congestion. Capsules strip easily.
Intestines - Omentum adhered to gall-bladder - Area of congestion at upper part of ileum for about 8 inches.
Contained 5 or 6 pieces of fecal matter rather hard & size of small hen egg.
Appendix - Half full of fecal matter, but normal
Pancreas - Normal & suprarenals normal. - Mesentery glands normal.
Uterus - Beginning congestion as if for menstruation, otherwise normal.
Ovaries - Slight enlargement of each - small cyst near left & some in Broad ligaments.
Urinary bladder - normal.
Gall-bladder - Distended & contained 18 medium sized gall stones & approximately 300 small ones (Hard)

Reg. No., 1311 , App. No., 1063 , Admitted, Oct. 25. 1906 , Born, Aug. 19th 1889 , Birthplace, San Francisco, California
Name, Hazel E Morehouse , Color, white , Sex, female , Age, 17 years, 2 months, 6 days, Residence, Berkeley. , Co., Alameda.,

GENERAL HISTORY AND REMARKS:

P. G. F. Died at age of 73: apoplexy.
P. G. M. " " " 57: angina pectoris.
M. G. F. Alive & well - age 72
M. G. M. " " " " 70.

Patient said to have "heart spells" which are without doubt epileptic in nature: said to be constipated by habit but regular living has so far (May '07) benefited her in this respect.

In July, 1907, Clara Lee had a peculiar attack of gangrene of the toes, unexplained any further than that it was considered due to an obscure spinal lesion. There were also ulcers on the leg which healed very slowly. The urine was free from sugar. She was of sluggish temperament & very fat. Her heart action was poor always, weak & irregular at times but no murmur or enlargement. She had a spasm early in the morning of September 8 from which she seemed to recover & was left by the attendant for a few minutes during which she expired, seemingly in the sleep which followed the spasm.

DIED September 8, 1907. epilepsy (heart failure) Remains shipped to Mother at Fresno Cal.

Reg. No., 1331, App. No., 65. , Admitted, April 25. 1907. , Born, date not known. , Birthplace, Ontario.

Educational attainments at admission, said to read a little.
Locomotion, normal , Speech, fluent. , Temperament,
Diseases: Measles? yes , Scarlatina? yes , Whooping Cough? yes. , Vaccination? yes , Epilepsy? yes. till 10.
" Hysteria? , Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Grand parents all dead: cause unknown or unimportant.
On admission patient very garrulous & inquisitive but good-natured: constant shaking of head & hands: eats moderately: can help herself to a great extent.

Died DIED Aug. 19th 1913. Lobar pneumonia. (Age 81 yrs.) (Buried Home cemetery)

Postmortem held 30 hrs. after death.
Skin very "sallow." Very much discoloration over abdomen.
Rigor mortis in lower limbs.
Lungs: Rt. adherent to parietal wall. Consolidation in lower lobe of rt. lung.
Lt. crepitates. No adhesions.
Cranium very dull purple. Adhesions at anterior part of longitudinal fissure.
Brain weight 46 oz.
Some leptomeningitis over convexity with granules of lymph near border of longitudinal fissure.
Gross lesions not characteristic.
(Very hot day and a complete postmortem was not made.)

Reg. No., 1332, App. No., 1116, Admitted, April 26. 1907., Born, about. 1893., Birthplace, San Francisco.

GENERAL HISTORY AND REMARKS:
Grandparents all living except paternal grandfather: no cause or date given for his death.
Child has been in private institution: is bright in many ways - tries to help with younger children:

On February 6th she complained of pain in her stomach - & was given a mild laxative which she vomited. On evening of February 7th - she was found to be suffering considerable pain which as closely as one was able to ascertain it was localized in rt. iliac region: the rt. rectus abdominis, was quite rigid. She was taken to the hospital the next morning - & after a blood examination which showed 19,800 leucocytes - 91% polymorph. 3% large lymphocytes & 6% small lymphocytes: & temp. ranging from 101° to 103° rectal - it was diagnosed - an acute attack of appendicitis with probable - spreading peritonitis: Dulness was elicited on rt. side & in median line - of at 8 PM - white blood count was 17,800 - poly. 87% s. lymph. 7% lge. lymph. 6%. Eosin 0.1%: At 10 PM - since she was practically prepared for a laparotomy (having had no food or liquids in the past 24 hours - she was operated upon by Dr. Alice M. Woods of the Children's Hospital assisted by Dr. A. McBean & Dawson - A large ovarian cyst - (of the size of a new-born babe's head) - which was adhered to broad ligament - appendix - was removed en masse. On February 10th - her WBC. came down to 15,600: poly. 82% lge. lymph. 5% small. lymph. 13%. & there was a gradual diminution until February 20, 12 when her count was 9,300: lge. lymph. 7% small lymph. 19%. Poly. 73% Eosin. 1%. By morning of 9th day after sutures were removed - her temp. rose - & when the incision was examined on the 10th - a stitch hole abscess was found - which extended along the right border of the incision margin. This abscess discharged considerable pus & disintegrated fat for several days - & finally as there was a continuous discharge of seropus - the abscess was incised & application of tinct. iodine with gauze drainage instituted by Dr Woods. on March 5th - 1912. The abscess gradually closed - & incision which had firmly healed - both behind & in front of the muscular wall: was now firmly united on April 1, 1912. & the patient discharged: being in the best of health.

On April 15, 1912 - she came into the hospital on account of severe attack of bronchitis - angina - all of which were prodromata of

GENERAL HISTORY AND REMARKS:

Grand parents all living (?) written for history.

Patient herself gives history of menstrual irregularities at puberty. Have toes on right foot sore: evidently due to slight injury.

Sybil has been going down, especially mentally, but physically as well ever since admission & was finally transferred to Stoneman Barracks. She developed a blister on one heel, which was slow in healing & later a large burrowing ulcer appeared in the calf of the same leg, with much swelling & induration. For treatment of this she was sent to the hospital Jan. 24. 1908. Abscess was opened Jan. 28 & a large quantity of pus (about ℥v) drained off. She had no fever & the wound did well. Feb. 1st she has some fever (102.) & in the 6th it rose to 105. with signs of pneumonia. There was delirium & much prostration, no sleep however. She succumbed at 9 P.M. Sunday night (Feb. 9). Her remains were sent to her sister at Stockton, California.

DIED February 9. 1908. of septic pneumonia.

GENERAL HISTORY AND REMARKS:

No history came with Blanche - Her account of herself is briefly as follows. She was married & was neglected by her husband. In revenge she became a prostitute but only for a short time. She was pregnant at the time. She was taken to a refuge by charitable people where her baby was born - Later her child was placed elsewhere & she was committed here by the court. She is perfectly tractable & is capable & fairly bright. She says she desires to lead a right life when again thrown upon her own resources.

Paroled February 22. 1908. to Mrs. Clark of Glen Ellen, California, who is to report monthly concerning her.

Paroled ,1909 to Dr. Zilla (Turner) Pettis, Glen Ellen -

GENERAL HISTORY AND REMARKS:

There is practically no history owing to age.

April 1908 - At times Theresa has "spells" in which she grows weak & thinks she faints. Her pulse is poor but she is soon restored by a little stimulant & the recumbent position." - Had three - four such spells since 1908 (July) - up to time of death. August 24-1910 - she was taken to hospital on account of attack of bronchitis - On September 26th she was sent back on account of a relapse - and became steadily weaker. On October 2, 1910 she became delirious & perceptibly weaker. On October 4, 1910 - she expectorated a foul smelling & greenish fluid - pointing to probable gangrene. She passed away at 8:40 A.M. October 5, 1910 -

DIED October 5 - 1910. Remains buried in Home Cemetery October 6, 1910.
Cause of death - Valvular heart disease (mitral stenosis) - secondary chronic bronchitis.

Disinterred Jan. 26, 1914. Remains sent to Sacramento, Cal.

Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:
Little history of grandparents: maternal grandfather died of "spinal disease". Mother said to have had scrofula. Child had boils on head between ages of one & two: said to have been a sickly baby: fretted constantly. Mother has cancer at present time.

During June & July 1909 she had profuse menstruation — which yielded to treatment — i.e. hot vaginal douches & uterine tonic tablets (Abbott): was in the hospital again during October & November for same complaint: put finally on ergotin tablets with subsequent recovery: cause of trouble assigned to masturbation — & for this she has been put in a restraint during the night.

Reg. No., 1376, App. No., 1061, Admitted, September 18, 1907, Born, January 6, 1904, Birthplace, Shasta Co: California
Name, Etta Elizabeth Sellon, Color, white, Sex, female, Age, 3 years, 8 months, 12 days, Residence, Igerna, Calif., Co., Siskiyou,
Parentage: Father living, yes, ~~Dead~~, Occupation, engineer -, Nationality, American, Age at birth of this child, 28,
" Mother " ", ", " housewife probably., " ", " " " 25.,
Blood relationship of Parents, none, Conjugal relation,
Relatives or Ancestors similarly afflicted,
" " otherwise afflicted, one relative paralyzed (169.) mother has ovarian tumor.
" " intemperate,
Heriditary influences, seemingly good
Labor, ordinary, Delivery, at term - non-instrumental.
3rd child of Parents. Condition of other children, normal.
Alleged Cause of Deficiency, fall at 3 months of age, Date of recognition, 4th month.
Degree of deficiency at admission, feeble-minded, Abnormalities, Drools constantly; undeveloped enlarged liver - lower border 1 cm below costal margin (rt. side.
Physical condition: General development, poor, Skin, fair & clear - some enlarged venules over abdomen & thorax (rt. side
Hair, OK, Sight, seemingly normal., Hearing, same.
Smell, , Taste, , Touch,
Heart action, etc., OK, Pulse, 120 - OK, Circulation,
Lung action, OK, Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, slightly coated, Teeth, fair.
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission,
Locomotion, , Speech, does not speak -, Temperament,
Diseases: Measles? no, Scarlatina?, Whooping Cough?, Vaccination?, Epilepsy? probably.
" Hysteria?, Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Grand parents history negative except that maternal grandfather was a paralytic. Child sits alone but can neither stand nor walk; does not speak - drools to an extreme degree.

This child has improved wonderfully - physically & to some extent mentally under mercurial injections given at intervals during winter & spring of 1908 - & again during fall of 1909. Began to walk - June 1910 - able to walk without assistance July 1910 -

DIED 11-19-18
Cause: Prim. Spanish Influenza.
Contr. Broncho Pneumonia.
Mentality (Id. Epl.)
Autopsy held. For findings see Autopsy Book 6, Protocol #93

Reg. No., 1377, App. No., 1179, Admitted, September 19. 1907, Born, at Lower Lake, Calif., Date of Birth~~place~~, Oct. 29. 1879.
Name, Emma Hanson, Color, White, Sex, female, Age, 27 years, 10 months, 20 days, Residence, , Co.,

GENERAL HISTORY AND REMARKS:
P. G. F. Alive & well
P. G. M. Dead: cause "bowel trouble"
M. G. F. " : " "liver disease"
M. G. M. " " chronic Diarrhoea

Child has been brighter than at present — learned at one time to print letters of alphabet — On admission had been ill & was very weak.

Ethel was a frail sick child on entrance & was put into hospital at once. She was in the hospital off & on most of the time until her final illness which began Nov. 26. Her progressive emaciation, irregular Diarrhoea & led to a suspicion of tuberculosis. Ulcers & pressure sores threatened & one large ulcer on hip was slow in healing. She seemed a little brighter at times but on the whole grew steadily worse during December & died Jan. 26, passing away quietly.

DIED January 26. 1908. of tuberculosis. Buried in Home Cemetery in presence of father & mother.

Reg. No., 1379, App. No., 1077, Admitted, October 8. 1907, Born, May 15, 1904, Birthplace, Kings Co California
Name, Naoma May Lasch, Color, white, Sex, female, Age, 3 years, 3 months, 23 days, Residence, Berkeley, Co., Alameda,
Parentage: Father living, yes, ~~Dead~~, Occupation, unknown, Nationality, unknown, Age at birth of this child, —,
" Mother " ", ", " , " , " " " —,

Locomotion, no use of limbs -, Speech, Absent, Temperament,
Diseases: Measles? no, Scarlatina? no, Whooping Cough? no, Vaccination? , Epilepsy? no
" Hysteria? , Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Child is size of infant of 8 or 10 months: eats & sleeps fairly well, former irregularly taking only cold milk:
No history of parents or grandparents.

This child was known by the name of "Emily" in her ward. She was a weazened, emaciated, prematurely-old-looking little thing, a bedfast invalid. She did not improve in the winter and in the spring of 1908 she began to fail. Through the months of April and May she had very loose and foul smelling evacuations of such a character as to suggest tuberculosis of the bowels. In May she was treated for a muco-purulent otitis media with its final cessation. Growing worse in June she was placed in the hospital on the 16th. 17th no better. 18th. Patient died at six o'clock this morning.

Died DIED June 18 1908. Buried in Home Cemetery, Eldridge.

Reg. No. 1380, App. No. 1175, Admitted, October 9. 1907, Born, April 29. 1877, Birthplace, New Market: New Hampshire

Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:
No history of grand parents.

Had two attacks of otitis media with purulent discharge (rt. ear) for a few weeks during winter of 1908 & 1910.
March 1/10 just recovering from ringworm of scalp (occipital region). Eruption size of a dollar.

Examination made Apr. 10, 1914 by Dr. Brousseau (Phd.) Physical age 22. Mental age 3^3

Reg. No., 1384 *, App. No.,* 1207 *, Admitted,* October 16, 1907 *, Born,* July 3, 1886 *, Birthplace,* San Francisco, Calif.
Name, Jennie Anderson *, Color,* White *, Sex,* female *, Age,* 21 *years,* 3 *months,* 13 *days, Residence,* Fair Oaks *, Co.,* ,
Parentage: Father living, , Dead, , Occupation, , Nationality, , Age at birth of this child, ,
" Mother " , " , " , " , " " " ,
Blood relationship of Parents, , Conjugal relation,
Relatives or Ancestors similarly afflicted,
" " otherwise afflicted,
" " intemperate,
Heriditary influences,
No history.
Labor, , Delivery,
child of Parents. Condition of other children,
Alleged Cause of Deficiency, thought to be congenital. *, Date of recognition,*
Degree of deficiency at admission, , Abnormalities,

Physical condition: General development, , Skin,
Hair, , Sight, an error of refraction - *, Hearing,* normal.
Smell, , Taste, , Touch,
Heart action, etc., , Pulse, , Circulation,
Lung action, , Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, , Teeth,
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, reads, writes etc.
Locomotion, normal *, Speech,* normal - *, Temperament,*
Diseases: Measles? yes *, Scarlatina? , Whooping Cough? , Vaccination? , Epilepsy?* no.
" Hysteria? , Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:
Patient has been an inmate of Maria Kip Orphanage for years & little is known of her antecedents. One or both parents are said to have died in prison.- She is high grade imbecile & well developed. She has incendiary tendencies. (see correspondence).

Reg. No. 1388, App. No. 1193, Admitted, October 20, 1907, Born, Jan 21, 1866, Birthplace, San Francisco California
Name, Clara Barateau Minturn, Color, white, Sex, female, Age, 41 years, 8 months, 29 days, Residence, Alameda –, Co., Alameda,
Parentage: Father ~~living~~, Dead, Occupation, merchant, Nationality, French, Age at birth of this child, 40,
" Mother " both, ", ", ", ", " " " 33,
Blood relationship of Parents, none, Conjugal relation,
Relatives or Ancestors similarly afflicted, "
" " otherwise afflicted, Mother said to have had tumors.
" " intemperate, none.
Heriditary influences, seemingly good
Labor, ordinary –, Delivery, at term – non-instrumental.
— child of Parents. Condition of other children, 1 brother – normal.
Alleged Cause of Deficiency, none given, Date of recognition, 1890 –
Degree of deficiency at admission, imbecile –, Abnormalities,

Physical condition: General development, slight in build –, Skin, dark in places
Hair, , Sight, , Hearing,
Smell, , Taste, , Touch,
Heart action, etc., , Pulse, , Circulation,

Tongue, , Teeth,
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, reads. writes, plays piano – speaks French.
Locomotion, normal., Speech, normal –, Temperament,
Diseases: Measles? yes, Scarlatina? —, Whooping Cough? yes, Vaccination?, Epilepsy? no.
" Hysteria?, Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:
Parents & grand parents all deceased – no causes given. Patient is quiet in manner; receives impressions slowly & is impotent in manner at times.

Successfully vaccinated April 4, 1908.
DISCHARGED Dec. 8 – 1911 Improved – Request of Brother (At Suggestion of Board)
Readmitted Dec. 11 – 1911.
DIED Feb. 3 – 1913 Cerebro spinal meningitis. (Buried Home cemetery)

Reg. No., 1391, App. No., 1155, Admitted, October 28, 1907, Born, March 15, 1896, Birthplace, San Francisco, California
Name, Edna Petterson, Color, White, Sex, female, Age, 11 years, 7 months, 13 days, Residence, San Francisco, Co., S. F.,
Parentage: Father living, no, Dead, , Occupation, master mariner., Nationality, Norwegian., Age at birth of this child, 30,
" Mother " yes, –, " housewife, " German., " " " 21,
Blood relationship of Parents, none, Conjugal relation,
Relatives or Ancestors similarly afflicted, "
" " otherwise afflicted, "
" " intemperate, "
Heriditary influences, seemingly good
Labor, ordinary –, Delivery, at term – non-instrumental –
first. child of Parents. Condition of other children, normal.
Alleged Cause of Deficiency, congenital (accident to mother during pregnancy), Date of recognition, during first year
Degree of deficiency at admission, , Abnormalities, extreme scoliosis. – skull asymmetrical

Physical condition: General development, poor. – emaciated. –, Skin, ulcer on back.
Hair, , Sight, , Hearing,
Smell, , Taste, , Touch,
Heart action, etc., weak but not irregular., Pulse, rapid – 130 +, Circulation,
Lung action, fair – prolonged expiration., Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, , Teeth,
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, none.
Locomotion, difficult, Speech, , Temperament,
Diseases: Measles? yes. 1896., Scarlatina?, Whooping Cough? yes – 1897, Vaccination? no –, Epilepsy? no –
" Hysteria?, Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Grand parents all living – Parents dead (?)

Edna was in poor condition on admission & never seemed comfortable. At times she screamed but whether from pain or mere lack of mentality was not apparent & physical examination revealed nothing but displaced organs due to the deformity which was extreme. She began to fail more noticeably late in January & was taken to the hospital Feb. 4 with symptoms of a broncho-pneumonia. It was probably tubercular in origin. She died Feb. 7, 1907.

DIED February 7, 1907 – Remains shipped to relatives at San Francisco.
Cause / Broncho pneumonia

Reg. No., 1392, App. No., 1143, Admitted, October 29, 1907, Born, April 18, 1879, Birthplace, Wisconsin U.S.A.
Name, Hilma Christina Lundholm, Color, white, Sex, female, Age, 28 years, 6 months, 11 days, Residence, Petaluma, Co., Sonoma,
Parentage: Father living, yes, ~~Dead~~, Occupation, Shoemaker, Nationality, Swedish, Age at birth of this child, 33,
" Mother " no. " , " housewife , " , " " " 34,
Blood relationship of Parents, none, Conjugal relation,
Relatives or Ancestors similarly afflicted, none
" " otherwise afflicted, "
" " intemperate, "
Heriditary influences, seemingly good
Labor, ordinary – , Delivery, at term – instruments used
fourth child of Parents. Condition of other children, normal – fairly intelligent.
Alleged Cause of Deficiency, congenital defect – , Date of recognition, 4th or 5th year.
Degree of deficiency at admission, high-grade imbecile – , Abnormalities, dull expression.

Physical condition: General development, good , Skin, normal
Hair, , Sight, normal – , Hearing, normal –
Smell, , Taste, , Touch,
Heart action, etc., normal , Pulse, , Circulation,
Lung action, " , Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, " , Teeth,
Menstruation: Regular? Irregular? Scanty?

Locomotion, , Speech, , Temperament,
Diseases: Measles? yes. 1900 , Scarlatina? , Whooping Cough? yes. in infancy, Vaccination? yes. 1900 , Epilepsy? no
" Hysteria? , Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Mother died in childbirth at age of 34.
Grand parents all dead except maternal grandmother.
Hilma was an inmate of this institution from to.

Successfully vaccinated April 4 1908.

April 11, 1911 – Examination of abdomen revealed large tumor – probably uterine in origin. On April 15, 1911 – Dr. Alice M. Woods of the Children's Hospital assisted by Dr. Clara Williams & Staff – removed an immense mixed tumor of broad ligament – adherent to large fibroid uterus & cystic ovaries – the tumor en masse weighing 7¼ lbs. She had an uninterrupted convalescence until the evening of the 12th day when she had fever – & urine showed numerous pus cells. Under urotropin (urinary antiseptics) – Potass. Acetate & antipyretics she gradually recovered – & was discharged from the hospital June 20, 1911. Specimen of tumor can be seen in ~~Hosp~~ Laboratory pathological display.

Reg. No., 1394, App. No., 1394, Admitted, Oct. 31. 1907, Born, July 10. 1889, Birthplace, Alameda Co. California
Name, Mabel Amelia Lewis, Color, White, Sex, female, Age, 18 years, 3 months, 21 days, Residence, Oakland., Co., Alameda
Parentage: Father living, not ~~known~~., Occupation, farmer, Nationality, Portugese (?), Age at birth of this child, 37,
" Mother " yes., " , " domestic., " American, " " " 18,
Blood relationship of Parents, none, Conjugal relation,
Relatives or Ancestors similarly afflicted, none.
" " otherwise afflicted, paternal uncle chorea: great-uncle congenitally blind - headache & neuralgia of mother &c
" " intemperate, father -
Heriditary influences, poor - mother nervous & unhappy during pregnancy -
Labor, ordinary -, Delivery, at term - non-instrumental.
~~first~~ second child of Parents. Condition of other children, half-sisters said to be normal.
Alleged Cause of Deficiency, congenital - developed convulsions at 3 -, Date of recognition, about 3rd year.
Degree of deficiency at admission, high-grade imbecile - moral imbecile also -, Abnormalities, lisps - drools -

Physical condition: General development, fair -, Skin,
Hair, , Sight, slightly defective., Hearing, normal
Smell, , Taste, , Touch,
Heart action, etc., , Pulse, , Circulation,
Lung action, left lung affected - see below., Respiration per m., Chest mea. inspr., in., expir., in., expan., in.
Tongue, , Teeth,
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of, has never menstruated,
Educational attainments at admission, reads & writes a little -
Locomotion, normal., Speech, A trifle indistinct; "swallows her words.", Temperament,
Diseases: Measles? yes, Scarlatina? no., Whooping Cough? yes -, Vaccination? 1906 -, Epilepsy? ~~probably~~ yes
" Hysteria? , Chorea?
Diagnosis of, Epilepsy and moral imbecility, Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:
grandparents living as far as known. Father was a drunkard, cruel & said to be "lazy." (14)
Dr. Shuey's report points to a condition of moral as well as mental imbecility -
On entrance patients lungs were found to be affected - altered breathing, dullness at apices, but no tubercle bacilli found in sputum. She was placed in tent with forced feeding. In the stormy weather she was placed in a special division of Stoneman Barracks. Here she did well in general but with no change in the apices of the lungs. After a walk in early May she grew rapidly worse and on May 10th, showing signs of pleurisy, she was transferred to the tent at the Hospital. May 11th. Very feverish and racked with pain. 13. Complains much of her side. 15. Less pleuritic pain and brighter. 17. Complaining much of pleuritic pain on the other side (left) this afternoon and early evening. 20th. Nauseated. Depressed in body and mind. 21st. Very prostrate. 22d. Weak and declining fast. 23d. Very weak and with whispering voice this morning. Expectorated with difficulty. She failed in the afternoon and died at 5:30 p.m. the writer being present.

DIED May 23 1908 of Tuberculosis. Buried in Home Cemetery, Eldridge.

Reg. No., 1400 , App. No., 1217 , Admitted, November 26, 1907, Born, February 22. 1887., Birthplace, San Francisco.
Name, Adolina Wise , Color, white , Sex, female, Age, 20 years, 9 months, 4 days, Residence, San Francisco , Co., S. F. ,

Educational attainments at admission, reads a little so
Locomotion, normal. , Speech, slightly defective. , Temperament,
Diseases: Measles? probably , Scarlatina? , Whooping Cough? yes. , Vaccination? yes. , Epilepsy? no.
" Hysteria? , Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Mother died at age of twenty six of dropsy.
Father " " " " thirty-five " pneumonia
No history of grand parents except maternal grandmother,
who died at age of seventy-seven of "senile pneumonia".

Successfully vaccinated Apr. 4. 1908.

Matilda Ellen Denis

On October 10 /1908 Ellen was seized with a fainting fit without evident cause. On examination it was found that her temperature was 103°. She was taken to the hospital immediately and on further examination dullness & bronchial breathing was discerned at the base posteriorly of the left lung. A blowing systolic murmur with increasing intensity to the left could be heard at the mitral area. She has a slight hacking cough which gradually disappeared in a few days. On October 11/08 her temperature rose to 105.2 F. but with the use of warm mustard packs & antipyretics it dropped to 101.3 the following morning. After this date it never rose above 100 F. and during the last week it was always below 99.4 The bronchial breathing gradually disappeared and the breath sound became practically normal in quality: although the dullness persisted up to the time of death. She became extremely emaciated.

Died October 24/1908. died of pulmonary tuberculosis - contributary cause, pneumonia. Body shipped to Angels Camp.

Adeline is said to have peculiar fainting spells - shaking & twitching of body (Medical attendant has never seen her in one of these attacks) - but soon afterwards - suspicion of petit mal.

" Hysteria? , Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

No history of grandparents -
Patient on arrival seemed much exhausted but revived soon; she is addicted to the constant use of coffee ~~&~~ according to history given by her brother, after lived for days on coffee & bread, taking some every hour or so. It is intended to gradually reduce this.

Frances though not as talkative as her brother described her to us, seemed in fairly good spirits & health until the morning of the 20th (December, 1907 - 8 days after admission) when she was taken with what appeared at first to be a fainting fit & was put to bed at once. Her pulse was gone at times but came up somewhat under stimulation. She only lived a few hours however.

DIED December 20. 1907. cardiac insufficiency. (sudden failure) Autopsy.
Remains were interred in Home Cemetery.

Autopsy, Dec. 22 1907. Emaciation marked. Rigor mortis not marked and hardly any livores. The thorax is considerably deformed. Lungs pink with puckered scars at apex. Heart quite small, walls thick but hardly hypertrophied. Both chambers very small and invaded by organized clot in the right ventricle. Liver rather large, pale and looking as if affected by passive congestion.
Spleen small and seemingly normal. Kidney: left, small; cortex thin.
Cranium. A currant-juice looking fluid was reached before the skull-cap was removed. Adhesions present down the longitudinal sinus. The left half of the cerebellum is almost entirely gone, a porencephalic sac alone remaining. A watery sac represented the right half of the cerebrum. A large porencephalic cavity replaced the white substance. The cortex was very thin over the right side.

Reg. No., 1414, App. No., 1221, Admitted, December 14, 1907 Born, July 12. 1901, Birthplace, Los Angeles
Name, Frances Velma Moeller, Color, white, Sex, female, Age, 6 years, 5 months, 2 days, Residence, Los Angeles, Co., L.A.,
Parentage: Father living, not ~~known~~, Occupation, Son of farmer, Nationality, } unknown, Age at birth of this child, 23,
" Mother " no history, " Domestic, " , " " " 19,
Blood relationship of Parents, , Conjugal relation,
Relatives or Ancestors similarly afflicted, } no history
" " otherwise afflicted,
" " intemperate,
Heriditary influences,
Labor, probably ordinary -, Delivery,
1st child of Parents. Condition of other children, no history
Alleged Cause of Deficiency, congenital : also an accident at age of 3 -, Date of recognition, early.
Degree of deficiency at admission, high grade, Abnormalities,

Physical condition: General development, fair., Skin,
Hair, , Sight, nystagmus., Hearing,
Smell, , Taste, , Touch,
Heart action, etc., normal -, Pulse, , Circulation,
Lung action, , Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, , Teeth,

Diseases: Measles? no, Scarlatina? no, Whooping Cough? no, Vaccination? yes – in 1905, Epilepsy? doubtful –
" Hysteria? , Chorea?
Diagnosis of, amaurotic idiot, Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Child is small, but quiet & good natured. Cries at times but for no known. Family history of grandparents negative – Mother is evidently feeble-minded – father fairly intelligent. They have had one seemingly normal child – the last. One in the Boys' Nursery, one died after application to this institution but before admission, this child being brought in its place. Child said to have had "spells" about two years ago – turned eyes & got cold – description unlike epileptic spasm –

Edna was frail from admission but seemed to gain a little at times. On the morning of February 1st she went suddenly into a semi-comatose condition with shallow breathing, eyes rolled up more than before, & at times seeming distress. The coma deepened & she was considered moribund but lived until February 3, 1908. She was buried in the Home Cemetery in the presence of father & mother. No post-mortem was held.

DIED February 3, 1908: meningitis: buried in Home Cemetery February 5. 1908.

Heriditary influences, seemingly good.
Labor, ordinary, Delivery, at term non-instrumental.
1st (?) child of Parents. Condition of other children, normal - one brother.
Alleged Cause of Deficiency, repeated illnesses - see below. , Date of recognition, June 1907.
Degree of deficiency at admission, Epileptic and imbecile, Abnormalities, scar over rt. sterno-cleido-mastoid muscle - small enlarged cervical glands.

Physical condition: General development, Well grown but rather slender, Skin, Fair and clear.
Hair, OK., Sight, Good., Hearing, Good.
Smell, OK, Taste, , Touch,
Heart action, etc., OK, Pulse, 80 - OK., Circulation,
Lung action, OK., Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, slightly coated., Teeth, good.
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, None; up to April or May 1907 she was a school-girl
Locomotion, Normal., Speech, , Temperament,
Diseases: Measles? yes, Scarlatina? yes, Whooping Cough? yes., Vaccination? no, Epilepsy? yes.
" Hysteria? cerebro-spinal meningitis? Yes, May 1907, Chorea? '
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS: Marie was brought to the Institution for consultation in the summer of 1907. (Gray) No history of grand parents. Child's condition is attributed to having had, in the spring of 1907, measles, whooping cough & final cerebro-spinal meningitis in rapid succession. Convulsions appeared after latter illness. Child is very nervous in manner rushing from place to place & pulling when restrained. She seems to have an aura with the spasms described as a tendency to strike her head against any hard object blindly.

She has been given Sat. Hydrocyanate of Iron: ~~[illegible]~~ & Chloretone Powders 0.3 aa at bedtime for several months with no appreciable results - in the character or frequency of her seizures.

On September 10 she was put on Calcium Lactate 0.3 after meals - & Chloretone was kept up with the following results:-

DIED Died. Feb. 7th 1914. (Taken ill Feb. 3rd '14. Diarrhoea + spasms.)

Post mortem. 2 hrs after death.
Rigor mortis beginning in arms only.
Livores on back, neck and sides.

Enteroptosis. Appendix and ovaries normal. Dilatation of stomach.
Uterus, infantile
Entero colitis. Inflam. of caecum and about 8 in. of ascending colon.
Descending colon and sigmoid flexure atrophied.
Gall stones.
Spleen enlarged.
Stellate scars on liver.
Brain. wt. 1lb 13 oz. Pia mater much injected. Lymph great amt. on left hemisphere of brain. Cerebro spinal fluid increased amt. in brain cavity
Dura adherent along longitudinal fissure and on each side of base of skull extending to foramen magnum.
Cause of death (Pachymeningitis.) Leptomeningitis. Ileocolitis. Epilepsy.
(Shipped to Petaluma Calif)

Reg. No., 1431, App. No., 1186, Admitted, January 28 1908 Born, July 22. 1888 Birthplace, San Francisco California.
Name, Stella Kuhn., Color, White, Sex, female, Age, 19 years, 6 months, 6 days, Residence, San Francisco, Co., S. F.,

GENERAL HISTORY AND REMARKS:
Grand parents all dead - no history otherwise.

On July 28/08 Johanna complained of a sore throat - hyperemic condition present. was treated with local applications. She had an attack of indigestion July 29/08 - became quite nauseated - complained of headache and looked very pale. Posterior cervical glands were enlarged and a rash appeared over back & chest spreading rapidly - accompanied by fever 102 2/5. She was taken to the hospital - condition diagnosed as German measles - treated symptomatically. On July 30, 1908 temperature continued to rise - no alleviation obtained with antipyretics & of warm mustard packs: at time of death which occurred at noon, the temperature rose to 109°. On July 29-1908 - a systolic murmur could be heard over mitral area - question of acute endocarditis. This child called herself by her middle name, Minetta, and was a favorite because of her lovableness.

DIED July 30 1908 of malignant endocarditis complicating rubella. Buried in Home Cemetery.

GENERAL HISTORY AND REMARKS:

Child came from San Francisco Orphanage with a history of the mother having died & the father deserted the child. The history is incomplete - The Mother died of Bright's disease.
Child is anaemic & illy nourished -

The child was treated for burns of both hands & elbow - at the Children's Hospital - November-1907: while there she was given mercurial inunctions - thereby improving marvelously both mentally & physically. She was in my service and under the care of Dr. E. A. Willets & A. M. Gutzwiller - interne at the C.H.S.F. - until she was committed here.

Examination made Apr. 10th, 1914 by Dr Brousseau. Physical age 13. Mental age 4.

" Hysteria? , Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:
P. G. F. died of consumption at 65 years
P. G. M. " " paralysis at 56 "
M. G. F. " " heart trouble at 84 "
M. G. M. " " asthma at 70 "

Dec. 30-1913 - In hospital with Bronchopneumonia - sick 3 weeks
Jan 23 1914 - " " " Bronchitis " 1 week.
Oct. 31-1914 - To hospital - vomited rags, and passed same by bowels in great quantities - Pneumonia developed a day or two after. Temperature went to 104° Vaccines had no affect. Same temp with [illegible]

DIED Nov. 7-1914 - Lobar Pneumonia - Abscess of Lung - (Contributory) Epilepsy

Autopsy held 20 hrs after death.
Rigor Mortis - Moderate - Discoloration over chest, arms & back
Abdomen, on opening, stomach quite prominent.
Lungs.
Left - Weight ℥14, no adhesions - small tubercle? near base of upper lobe, rather caseous, Hypostatic congestion moderate, otherwise normal.
Right - Weight ℥20, old & new adhesions at apex, fresh adhesions posteriorly at upper border of lower lobe - Consolidation of about 3/4 of lung - Small abscess cavity about 3 inches below apex, posteriorly & rather superficially.
Heart - Weight ℥7. - Organized clot in both ventricles - mitral valve shows old vegetations
Aortic valve normal, other valves normal.
Left ventricle, columnae carneae thickened - Mild myocarditis.
Liver - Weight 3 lbs 2℥ - Normal
Gall bladder - very small & very little contents
Spleen - Weight ℥4 - Consistency soft - capsule strips easily - shows sepsis.
Pancreas - Normal.
Suprarenals - Left considerably enlarged, showing degeneration.
Kidneys - Weight, left ℥3 Right ℥3½ Capsules stripped easily - Normal.
Thymus Gland - Still retained quite large.
Intestines - Small area of infection at upper part of ileum - Lower part slightly congested, entire colon moderately infected.
Stomach - Dilatation moderate, general infection, especially at cardiac end & pylorus - Small area of anemia near pylorus at lesser curvature.
Appendix - Enlarged, elongated & moderately infected - contained fecal concretions, but lumen patent.
(Brain & Head not opened)
Uterus - Menstruation just ceasing, still congested with blood clots.
Ovary - Small multiple cysts of left ovary - Right normal.
Bladder - Small, but normal.
Diagnosis - Lobar Pneumonia.
(Path) Abscess of lung.
Myocarditis (mild)
Dilatation of Stomach.
Ileo-colitis (Moderate)
Cystic ovary.

Clinical diagnosis - Lobar Pneumonia - Ileo-colitis. & (Epilepsy)

Microscopic examination of lung tissue - T.B. Neg. (Both lungs)

Reg. No., 1458, App. No., 1201, Admitted, April 23. 1908, Born, March 17, 1889, Birthplace, Sacramento, California

Name, Gertrude Olive Madden, Color, white, Sex, female, Age, 19 years, 1 months, 6 days, Residence, Oakland, Co., Alameda,

" Hysteria? , Chorea? No.
Diagnosis of, Epileptic, Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS: This girl's father died March 16th 1908 of atrophic paralysis, while this application was pending.

P.G.F. died at age 88 of natural causes
P.G.M. " " " 87 " "
M.G.F. " " " 72 of blood-poisoning.
M.G.M. died Mar. 21 1908

Since August /09 have put her on therapeutic treatment of Tuberculin Residue [1/10000 mg. initial dose = 2 minims T. given hypodermically every 5-7 days. The abscesses which developed last March 1st. in lumbar region - over 2nd lumbar spinous process - later another in the lumbar region to the right: and the third over the mid point of the crest of the ileum gradually ceased discharging pus. There was also one developed over the acromion process of the left scapula - which discharged for a few months and at the time the treatment was begun ~~it was~~ the charge of the discharge was [serous & at times seropus.

The treatment was continued until 20 minims of the residue had been given when it was stopped for two weeks. During this interval the Moro's diagnostic skin test with Tuberculin Ointment was tried and within 5 hours after the inunction - an evanescent macular eruption intermittent with healthy skin area appeared: and disappeared within a few hours. This reaction was not considered a positive one -

On October 9/09 the Serial Dilution no 2. of Tuberculin Residue was begun - the initial dose being 2 minims [1/1000 mg. Tuberculin T. Since November 15/09 - a treatment consisting of the daily injection of Bismuth Paste - as in R. into the abscesses has resulted in the healing of all abscesses except the one over the crest of the ileum which is slowly filling up - (Dec 21/09). The Tuberculin residue treatment is being continued.

R.

Bismuth Subnitrate	6 parts
White Wax	1 part
Soft paraffin	1 part
Vaseline	12 parts.

Sig - injected warm - heating for each series only the required amount.
The above prescription is given by Dr. S. J. Hunkin - S.F. [Calif. State Journal - October '09]

January /10 Opened another abscess just below site of 1st one (in lumbar region - left side over 10-12th rib) - treated this with Bismuth Paste - and at the end of February i.e. 2 months treatment it had closed up entirely. On March 5/10 I began to treat the abscess over crest of ileum with Ung. Hydrarg. Oxid. Rubrum 3% - The abscess over 2nd lumbar spinous process has closed - Opened another abscess in left hypochondrium April 1910 - irrigated with Sol. Chlorate Sodii for a few days - then injected Bismuth paste - Abscess only discharging serum - July 1910 - also the one on right shoulder - all others are now closed: general health good.

DIED March 28th - 1916 - at 1.15 P.M. Cause. Tuberculosis of Lungs - Contrib. Epilepsy.
Mental Grade - Low Grade Imbecile. Epileptic.

Body Shipped to Sacramento for Burial -

Reg. No., 1463, App. No., 1202, Admitted, May 5 1908, Born, January 3 1900, Birthplace, Hanover, Illinois.
Name, Jeanette Wiley, Color, White, Sex, , Age, 8 years, 4 months, 2 days, Residence, Agenda (nr Salinas) Co., Monterey,

" Hysteria? , Chorea? No
Diagnosis of, Cretin, Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:
P.G.M. died at 84: cause not known.
The other grandparents are living.

Since July, 1908 she has had discharging ears - first the right then the left one became effected. She was sent to the hospital & treated daily until Spring 1909. but no relief was afforded. She was dismissed in summer but returned September 19, 1910 as her ears & nose were discharging badly - & put on [illegible] injections with no results. Her tonsils & adenoids were removed but still no relief & the condition remained until the time of her death. On November 17th she accidentally sustained superficial burns of her ankles & feet with hot water - & these healed slowly. On or about January 15 she was observed to have fever & severe cough. She was examined & a ~~tubercular~~ process involving both apices & almost entire left lung was found. She was given cod liver (oil & pure) & tonics - antipyretics & mustard plasters to reduce ~~temperature~~ which ranged from 101 to 103° (rectal). In the past two days her ~~temperature~~ was at its height 103-104° (rectal) at 9 or 10 P.M. & the evening she passed away it was 101°. She seemed much weaker - although has sat up in bed & retained her nourishment fairly well - but grew gradually weaker and passed away at 11:25

DIED January 31, 1911 - Remains shipped to King City

Cause - Pulmonary tuberculosis - contributory chronic otitis media (tubercular)

GENERAL HISTORY AND REMARKS:
P.G.F. died of natural causes, over 70.
P.G.M. living.
M.G.F. living.
M.G.M. dead; age and cause not given.

On entrance this girl seemed weak and unable to walk well. Also to be very taciturn. On May 18 1908 she was found to have an inflamed bursa and was placed in Hospital. 19th. Improving somewhat. 20th. Leg better. She has had some febrile reaction. 21st. Unimproved. She talks in a whispering voice and seems very dull in intellect. 22d. Very apathetic; whispering voice: some inequality of pupils. Passing into stupor. 23d. Difficult to arouse from stupor. Stomatitis very marked. Temperature reached 106° Fahr. at 5 p.m. and 106.5° at 8 p.m. Sordes on teeth. The temperature rose at midnight to 108.5°. At 1:30 A.M. she died in coma

DIED May 24 1908 of Leptomeningitis. Body sent to Olema, Marin Co.

" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, None.
Locomotion, Absent. , Speech, Absent , Temperament,
Diseases: Measles? No. , Scarlatina? No. , Whooping Cough? No. , Vaccination? Yes, in 1899 , Epilepsy? No.
" Hysteria? , Chorea? No.
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

P.G.F. white - no history
P.G.M. colored - living - over 60 years.
M.G.F. white - no history
M.G.M. colored - died at age of 50 years - no cause assigned.

DIED March 14, 1909. Miliary tuberculosis - contributory causes pemphigus vulgaris - hydrocephalus

Postmortem Notes:- & History of illness:-

While at the Home she retained her usual state of good health - until March 1, 1909 when it was observed that she refused her food & appeared to be ill. She did not cough or expectorate or show any signs of pulmonary trouble. On March 6th; she developed an attack of pemphigus - diagnosed later as pemphigus vulgaris. The lesions on the skin 1st appeared on the right gluteal region - some oval, some oblong & others serpiginous in character:- others appeared on the right & left heel, ankles & knees: left elbow and finally on the left hand (dorsal surface.). She was put on Fowler's Solution and otherwise treated symptomatically. The lesions were cleansed with dilute Hydrogen Peroxide - & dressed with Aristol & Boric Acid powder. On March 12th she seemed severely prostrated, failing rapidly - her temperature rising to 103.1 F. & pulse 160: She was taken to the Hospital - died March 13, - in the morning her temperature having dropped to 101. 2 F.

Postmortem - 24 hours after death: Rigor mortis not well marked. Body fairly well nourished: various lesions on skin of left elbow, hand, hips, gluteal region, knees, ankles & heels - supposed to be pemphigus vulgaris. Both knees were flexed & stiff: head pyramidal in shape (hydrocephalic): right frontal eminence more prominent than left - also left parietal more than right: - thus making antero-posterior diameter of head from right frontal eminence to left parietal longer than the one extending from the left frontal to right parietal eminence.

Thorax:- Adhesions over whole left lung & some recent, some old - a little serous fluid in left pleural cavity. Hypostatic congestion at base of left inferior lobe - tubercles at apex of both lungs - pus in bronchioles. Heart - small, flabby - otherwise healthy.

Abdomen:- Mesenteric glands extensively infiltrated & in part caseous in character. Spleen studded with tubercles. Left kidney exuded pus from pelvis - interstitial changes in pyramids. (No pus in right kidney - interstitial deposit less in this organ.

Skull:- cranium thin everywhere - cancellated tissue had almost disappeared in spots. Brain - hydrocephalic, found to contain 48 oz. (3 lbs.) of serous fluid: 1½ oz. lost on removing brain: making a total of 49½ oz. Weight of brain was 40 oz. & after withdrawal of water.

The cerebral hemispheres collapsed on withdrawal of fluid. On opening the brain - the white substance was found almost entirely wanting, the space having been converted into a mere sac - the lateral ventricles were dilated & filled with serum. The upper boundaries of the lateral ventricles were lost. The iter e tertio ad quartum ventriculum was distended to the size of an ordinary lead pencil. The corpus callosum was also reduced to a mere film of white matter. The gray matter was somewhat flattened out & thinner than usual. The porencephalic cavity is the largest yet found in the history of this institution.

A. M. Gutzweller M.D.

Diagnosis of, Epilepsy, Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Grandparents: age and causes not known.

Mrs. Ryan was admitted to the hospital Sept. 11. 1912 - with somewhat indefinite symptoms, resembling intestinal indigestion. - At times she had diarrhoea, tympanites & some pain. She was drowsy most of the time. These symptoms abated but recurred. - She grew weaker very slowly & toward the last had no pain. The Moro test was negative & tubercle bacilli were never demonstrated in the faeces -

DIED November 24. 1912 - Intestinal tuberculosis; body shipped to Salt Lake City, Utah.

Grand-parents dead: of old age.

March 16" - 1917 - In Isolation Hospital c Parotitis -

March 30" - 1917 - Good Recovery - Discharged -

Operated May 4 1920. 1 Double partial salpingectomy for sterilization Operator A. A. Thurlow

2. Incision of ovarian cysts of rt ovary.

Reg. No., 1498, App. No., 1092, Admitted, July 12 1908., Born, March 19th 1887., Birthplace, U.S.A. Ohio
Name, Lucy Josephine Roney, Color, white, Sex, female, Age, 21 years, 3 months, 24 days, Residence, San Francisco, Co., San Francisco
Parentage: Father living, , Dead yes, Occupation, painter, Nationality, , Age at birth of this child, 32 years,
" Mother " yes, " , " house wife, " , " " " 32 years,
Blood relationship of Parents, first cousins, Conjugal relation, Single.
Relatives or Ancestors similarly afflicted, A niece on maternal side - feeble minded: A cousin has mild form of insanity
" " otherwise afflicted, Deafness of maternal grandmother
" " intemperate,
Heriditary influences, Good.
Labor, Ordinary, Delivery, Full term
Third child of Parents. Condition of other children, A sister sound in body & mind
Alleged Cause of Deficiency, Consanguinity of parents, Date of recognition, in 1896.
Degree of deficiency at admission, , Abnormalities, none

Physical condition: General development, Well built, Skin, good
Hair, in fair condition: black., Sight, good, Hearing, good
Smell, , Taste, good, Touch, hypersensitive
Heart action, etc., good, Pulse, , Circulation,
Lung action, good, Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, slightly coated-, Teeth, some decayed.
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, Can read & count a little: cannot write - or cipher.
Locomotion, Inclines to right side., Speech, normal, Temperament,
Diseases: Measles? Yes in 1890, Scarlatina? yes, Whooping Cough? Yes at 6 mo., Vaccination? yes: in 1898, Epilepsy? no
" Hysteria? , Chorea? none
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

P. G. F. died at 65: heart disease
P. G. M. " " 52: unknown
M. G. F. " " 52: paralysis
M. G. M. " " I do not know

Reg. No., 1499, App. No., 1271, Admitted, July 16, 1908, Born, 1873 (?), Birthplace, Ireland
Name, Mary Garvey, Color, White, Sex, female, Age, 35 years,? months, days, Residence, San Francisco, Co., San Francisco
Parentage: Father living, Dead, yes, Occupation, Farmer, Nationality, Ireland, Age at birth of this child, 32 years,
" Mother " , " yes, " Housekeeper, " ", " " " 28 years,
Blood relationship of Parents, none, Conjugal relation, single
Relatives or Ancestors similarly afflicted, 1st cousin feeble-minded.
" " otherwise afflicted,
" " intemperate, Father
Heriditary influences,
Labor, ?, Delivery, Full term
Sixth child of Parents. Condition of other children, Fourteen sisters & brothers - all healthy
Alleged Cause of Deficiency, None, Date of recognition, Always mentally deficient.
Degree of deficiency at admission, Abnormalities, Had a recent dislocation of shoulder
Physical condition: General development, Well-nourished, Skin, good.
Hair, Thin & gray., Sight, good, Hearing, good
Smell, Good, Taste, Good., Touch, good
Heart action, etc., good, Pulse, good - strong, Circulation,
Lung action, good, Respiration per m., Chest mea. inspr., in., expir., in., expan., in.
Tongue, slightly coated., Teeth,
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, Can count some.
Locomotion, Shuffling gait., Speech, good, Temperament,
Diseases: Measles? yes, Scarlatina? none, Whooping Cough? yes, Vaccination? yes., Epilepsy? yes
" Hysteria? none, Chorea? no
Diagnosis of, Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

M. G. F. died at 73 of asthma
M. G. M. " " 74 of kidney
P. G. F. " " 80 - unknown.
P. G. M. " ? "

October 30/08 - She fell in a seizure and dislocated left shoulder - reduced under chloroform anaesthesia On April 18/09 she returned from a vacation with a redislocation of left shoulder date unknown which on further examination revealed an intracapsular fracture (anatomical neck) - The dislocation was subcoracoid. The arm was put up in splints and axillary pad and good union resulted - On attempting to reduce the dislocation it was impossible to do so - even under a general anaesthesia - both Kocher - and the old method of placing operator's foot in axilla. A consultation was held - the superintendent Dr. Wm J. G. Dawson being present who on examination stated that as the patient has fair use of her arm - i.e. could feed herself & as she was not required to any manual labour - it was best not to attempt forcible reduction: and operative procedures were at present out of the question. On September 2, 1911 she was sent to the hospital on account of a mild attack of bronchitis - from which she gradually recovered: until on the night of September 9th she had a couple of minor seizures. On examination the following morning it was discovered that she had had a stroke of apoplexy - her right side both arm & leg & also all muscles of the face except the eyelids being paralyzed - reflexes exaggerated. That afternoon she was not expected to live - heart action - lungs oedematous. She was given a hypodermic injection of [illegible] ether - later spts. camphor producing desired effects - although she remained partially unconscious until the day of her death - not having recovered from the stroke in any symptom. She passed away on the evening of September 12, 1911: & at the request of her sister - Mrs Ambrose her remains were shipped to Santa Rosa for interment.

DIED September 12, 1911.
Cause of death - apoplexy - following epilepsy.

Reg. No., 1500, App. No., 1290, Admitted, July 17, 1908, Born, September 14, 1899, Birthplace San Francisco.
Name, Waldburga Lausenderfer, Color, W., Sex, , Age, 8 years, 10 months, 3 days, Residence, San Francisco, Co., San Francisco
Parentage: Father living, Yes, Dead, , Occupation, Watchman, Nationality, Austria, Age at birth of this child, 39,
" Mother " Yes., " , " House wife, " U. S. A., " " " 27,
Blood relationship of Parents, none, Conjugal relation, single
Relatives or Ancestors similarly afflicted, none
" " otherwise afflicted, Maternal Grand-father - insane
" " intemperate, Grandmother
Heriditary influences, Unfavorable
Labor, Difficult, Delivery, Full term - instrumental
Fourth child of Parents. Condition of other children, said to be sound in body and mind.
Alleged Cause of Deficiency, Neurotic condition of mother, Date of recognition, in 1902
Degree of deficiency at admission, , Abnormalities, none

Physical condition: General development, Not well-nourished, stunted in growth., Skin, good
Hair, Thin - in fair condition, Sight, Good, Hearing, good.
Smell, good., Taste, good., Touch,
Heart action, etc., Good, Pulse, good: rapid., Circulation,
Lung action, good, Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, slightly coated, Teeth, 2nd incisors have come in behind the 1st.
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, Understands language at times - cannot articulate
Locomotion, , Speech, cannot articulate, Temperament,
Diseases: Measles? none, Scarlatina? no., Whooping Cough? no, Vaccination? no., Epilepsy? no
" Hysteria? no., Chorea? Yes; in infancy.
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Maternal G. M. living - in good health.
G. F. - insane
Paternal G. F. "dead" - killed in Civil War.
" G. M. living - in good health.

Examination made by Dr Brousseau Apr. 10, 1914. Physical age 15. Mental age 2^{1}
January 27-1916 Sent to Hospital sick Scarlet Fever.
March 21st-1916 - Discharged fr. Hospital in Good condition.

Operated Dec 18-1919 by A. A. Thurlow
1. Tonsillectomy + adenoidectomy

Died Mar 6, 1920, Addison's disease; bronchopneumonia Autopsy Mar 7, 1920.

Reg. No., 1501 App. No., 1306, Admitted, July 28, 1908., Born, November 3, 1847, Birthplace, New York.
Name, Adelia Sophia Gilbert, Color, white, Sex, female, Age, years, months, days, Residence, Sarpentina, Co., ~~Santa Cruz~~.

Diseases: Measles? Yes, Scarlatina? no, Whooping Cough? yes, Vaccination? yes, Epilepsy? no.
" Hysteria? , Chorea? no
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:
Maternal & paternal parents dead — cause unknown.

She was taken ill, with a severe attack of bronchitis on April 12th — & on morning of April 13th, she was found to have pneumonia of lower lobe of left lung. On the morning of the 15th — both lungs to be involved. Her heart was weak that morning — but she seemed to rally until 3:30 P.M. — when she was in a state of collapse. She was again given stimulants — & seemed to respond for an hour — but at 5:30 she began to sink. She passed away while unconscious — at 6:20 P.M. — April 15, 1912.

DIED April 15, 1912. Cause of death — lobar (double) — pneumonia (Buried Home cemetery)

GENERAL HISTORY AND REMARKS:

M. G. M. died at age of 44 yrs - accidental.
M. G. F. " " " 55 - fever (?)
P. G. M. living
P. G. F. dead - cause unknown.

August 11/08. She had an eruption on chest & arms - had enlarged posterior cervical glands: diagnosed German measles: rash disappeared in a few days: August 19/08. she was covered again with a more definite eruption, spreading over trunk and extremities - diagnosis German measles: question of relapse: She had an uninterrupted convalescence.

October 6/08. She had an attack of varicella - severe: large vesicles: no complications.
February 18/09 " " " " " measles [morbilli] - eruption almost confluent - uninterrupted recovery.

DIED October 5 - 1915 - 8.50 p.m. Cause. Tuberculosis of Lungs & Intestines - Epilepsy - Autopsy.

Autopsy held Oct. 6th 1915 - 17 hrs after death. Rigor mortis nil. Livor mortis especially in dependent portions of body - Quantity of subcut. fat in abdominal walls. Intercostal & abdominal muscles poorly developed - Gen. development, good.
Pleural Cavities - Adhesions at both apices posterior. Pericardium, empty.
Left Lung: weight 8 ozs: many small cavities at apices, full of puriform material. T. B. nodules also present in upper lobe posteriorly - corresponding to site of adhesions
Right Lung. Weight 9 ozs. Cavities & nodules at apex. T. B. nodules throughout.
Pancreas. Weight 2 ozs. On section O. K. Spleen. Wt. 2 ozs. On section congested throughout.
Left Kidney. Weight: 3 ozs. On section congested. Right Kidney. Weight 3 ozs. On section, O. K.
Ovaries, small aplasic. normal in color & shape. Thymus - persistent.
Stomach. Upper surface of fundus, posterior injected.
Intestines. Small ecchymosis & hyperaemia, full of nodular white bodies (ulcers?) size of pin head to pea. One ulcer on free border of intestines has perforated, another perforation in jejunum. 1st ulcer abt. 3 ft. distal to pylorus. Perforations in intestines = 4.
Bladder - normal - Ulcers also in Colon. In fact throughout entire length.
Heart - weight 5 ozs. Antemortem clot in rt. auricle.
Liver - Weight, 31 ozs. Under lower surface, stained c bile. Fatty degent.(?)

Head. Scalp & skull cap normal; latter a trifle asymmetrical on rt. side.
Dura. Slightly adhesions of dura at vertex at either side of long. fissure. Dura, O.K.
Pia normal.
Brain, weight 28 ozs.
Rt. cerebral hemisphere at occipital lobe ∠ angular. Slight cortical injection
Cerebellum - Asymmetrical, normal appearance.
Pons, medulla & crus all normal -

Buried in Home Cemetery.

GENERAL HISTORY AND REMARKS:

M. G. M. died at age of 66 - cause unknown
M. G. F. " " " " 73 -
P. G. M. " " " " 55 - tuberculosis
P. G. F. " " " " 65 - cause unknown

The applicant is a strong muscular girl: physically strong: has otitis media of the left ear which she has had at intervals for the past five years.

She gave a +++ positive Wasserman test - & on March 10, 1912 she was given an intravenous injection of Salvarsan ("606") .6 gram - while under ether anaesthesia. At the end of two weeks no change was evident in her mental condition - neither was there any improvement in her ear condition. The discharge of the latter - upon being cultured & examined was found to contain bacillus pyocyaneous (green). An autogenous vaccine (Emulsion) was prepared from this culture by Dr. Grace Linforth of S. P. Hospital. S.F. and on April 9th - she was given her 1st injection of one drop - repeated every 2nd day & increased by one drop until 8 drops had been given when the dose was doubled - 16 drops being given

GENERAL HISTORY AND REMARKS:

P. G. F. died of old age- at age of 70 years. The cause of death and age of the rest of her parents is unknown.

On October 1/1909- tried the Moro's skin reaction on her left arm with Tuberculin ointment- with no results. Have treated her several months for the enlarged cervical glands with Syr. Hydriodic Acid- and am now trying Fowler's Solution with increasing doses- beginning with 3 minims t.i.d. p.c. Have begun to give her hypodermic injections of Tuberculin Residue- serial dilution no. 1 (1/1000 mg- tuberculin)- increasing dose by 2 minims every 5 days- 1st injection given November 1909: on November 28/09 opened up two suppurating glands in neck- one on each side- packed with gauze drains- irrigated daily with Labarraque's solution (weak)- & packed with gauze drain- On December 20/09- sinuses are closing- On January 9, 1910 she seemed quite dyspnoic & restless- temperature rising gradually. On examination the following morning- moist & sibilant râles with beginning bronchial breathing at apex of left lung- later at base of right lung: She was treated with antiphlogistine poultice- mustard pastes to chest- internally hypophosphites- quinine & fever mixture & cardiac stimulants. Her condition became gradually worse and she passed away at 4:30 P.M. January 12, 1910.

DIED January 12, 1910. Buried in Home Cemetery January 14, 1910.
Diagnosis- Lobar pneumonia- contributory tuberculosis and tubercular adenitis.

Reg. No., 1554, App. No., 1313, Admitted, March 28, 1909, Born, August 7, 1888, Birthplace, Brooklyn, New York
Name, Louise Martha Herms, Color, white, Sex, female, Age, 20 years, 7 months, 21 days, Residence, San. Francisco, Co., San. Francisco
Parentage: Father living, yes, Dead, , Occupation, Chemist & paint manufacturer, Nationality, Germany, Age at birth of this child, 34,
" Mother " yes, " , " Housewife, " Germany, " " " 30,

GENERAL HISTORY AND REMARKS:

Nothing is known of family history.

On afternoon of September 25/09 she was accidentally burned on a hot heater in a dormitory during a seizure of petit mal. The accident occurred so suddenly and the patient gave no outcry; - thus not attracting the attention of the attendant ~~being~~ busily engaged a few feet away. The burn on the left malar region involved a very small portion of the external canthus of the eye - that on the cheek being about 1 1/4 by 3/4 inches. The other involved the ulnar surface of the right wrist - the size being 2 x 1 inches - both of the second degree. The burns were immediately dressed with a solution of picric acid for first 24 hours. The subsequent dressing consist in douching with a very weak solution of carbolic acid - and the application of R Ung. Zinc. Oxid. et Ol. Ricini aa parts. They were dressed daily during the first 10 days - & since that time have been dressed on alternate days. Her face healed with leaving a small linear scar - on & about October 26th - & the arm is now perfectly healed after slight complications with exuberant granulations - November 26th. /09.

DIED June 17- 1914- Status Epilepticus. (~~Buried in Home Cemetery~~) Shipped to Oakland.

" Hysteria? , Chorea? Diptheria - yes - Otitis Media - yes.
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

P. G. F. died of nephritis - age unknown - rest of family history unknown.

On October 17/09 while out walking she ran away from the line of girls - down a steep incline: slipped & fell - sustaining a double fracture i.e. of left tibia & fibula in the middle third. Her limb was put up in a fracture box with 8-10# weight for traction. On evening of October 18/09 she had a slight fever - pulse rapid & not in accordance with rise of temperature. A physical examination of chest was negative - with the exception that the heart sounds were of poor quality. She was given a general catharsis & stimulants to sustain pulse & sedatives to quiet her as she was quite restless. In spite of all treatment she passed away on October 20/09 - her temperature rising to 101² - pulse varying from 160 to 190 - the only thoracic signs present was some rough i.e. accentuated breath sounds in the left axilla - & some on right & poor heart sounds.

DIED October 20/1909 - body was shipped to San Francisco at request of aunt.

Autopsy notes - postmortem held 18 hours after death: body very well nourished - & well developed for a girl of her age.

Rigor mortis set in: hypostatic congestion in back, neck & buttocks.

Thorax - bloody serum - a small quantity in both pleural cavities: adhesions about upper left lobe posteriorly - & a few found at apex of upper lobe of right lung - & spreading towards root of lung: firm adhesions at base of lower lobe of right lung - anteriorly & posteriorly: also a few between the lobes: both lungs about the right middle lobe & lower lobe - anteriorly & posteriorly in stage of hepatization (red): & beginning broncho pneumonia in left upper lobe: both lungs much congested.

Heart - clear serous fluid about ℥i in pericardial cavity: heart, large, flabby: weight 13℥: large clot in right auricle: organized clot in right ventricle: chronic & old vegetations on tricuspid valve - also old fibrous vegetations on mitral valve: aortic valves congested: heart wall thin & flabby.

Diagnosis - bronchopneumonia - contributory chronic endocarditis causing tricuspid regurgitation: and accidental fracture of left tibia & fibula due to a fall.

Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Nothing is known of family history

Died Oct. 31–1916

Reg. No., 1601, App. No., 1054, Admitted, July 16, 1909, Born, July 21, 1895, Birthplace, Rio de Janiro, Brazil
Name, Susie Larizza, Color, white, Sex, female, Age, 13 years, 11 months, 25 days, Residence, Gridley, Co., Butte,
Parentage: Father living, no, Dead, , Occupation, laborer, Nationality, Italy, Age at birth of this child, 24,
" Mother " yes, " , " housewife, " Italy, " " " 24,
Blood relationship of Parents, , Conjugal relation, single
Relatives or Ancestors similarly afflicted,
" " otherwise afflicted,
" " intemperate, father.
Heriditary influences,
Labor, ordinary, Delivery, full term
Second child of Parents. Condition of other children, O.K.
Alleged Cause of Deficiency, prenatal influences, Date of recognition, at 2 years of age.
Degree of deficiency at admission, , Abnormalities, dorsal kyphos- flat-foot- contraction of extremities
Physical condition: General development, well-built., Skin, perfect
Hair, brown OK, Sight, ?, Hearing, ?
Smell, , Taste, , Touch,
Heart action, etc., OK, Pulse, OK: rate 90., Circulation,
Lung action, OK, Respiration per m., Chest mea. inspr., in., expir., in., expan., in.
Tongue, slightly coated, Teeth,
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, a helpless idiot-
Locomotion, cannot walk-: or sit without support, Speech, utters inarticulate sounds., Temperament,
Diseases: Measles? yes, Scarlatina?, Whooping Cough?, Vaccination? yes 10 years ago, Epilepsy? had peculiar "spells" 2-3 months ago-none since.
" Hysteria?, Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

All grandparents are living- with the exception of M.G.M. who died at age of 41 years- cause unknown.
Father died at age of 28 years- after a surgical operation for hernia.

Susie entered hosp. Feb. 6th 14. Died Apr. 17th 3:15 A.M. Post mortem held 12 hrs. after death. Kyphosis and Lordosis marked. Bluish-green discoloration of body. Rigor mortis slight. Caries of upper portion sternum. Adhesions left lung complete, firmly adhered from upper half to apex. Abscess apex eaten into chest wall. also posteriorly bet 2nd + 3rd rib posteriorly. Left lung 19 ounces. Firm adhesions at apex on right. Rt. lung 9 oz. Heart 8 oz. Mitral valve thickened. Muscle pale, slight thickening of aortic valves. Liver 27 oz. Spleen 4 oz. Skull cap very thin + porous. Brain quite deeply injected, esp. over left frontal lobe. Slightly adherent along longitudinal fissure. Brain 18 ounces. Kidneys wt. 4 oz. Lungs. broncho pneumonia in upper part of lower lobe of right lung. No tubercles. Left lung, abscess cavity size of walnut near apex posteriorly extending almost to summit. Also a smaller one at border of lung. Practically the whole upper lobe involved. Small tubercular deposits through lower lobe of left lung. Walls of left ventricle showing band of degeneration suspicious of myocarditis. Adhesions between ascending and descending colon. Left kidney in pelvic cavity. Normal. Uterus infantile. Ovaries small. Intestines areas of injection all through, otherwise normal. Appendix normal.

Diagnosis (Dr. Butler's aid P.M.) Pulmonary Tuberculosis. Abscess of left lung. Leptomeningitis. Myocarditis (slight.) Broncho-Pneumonia. Displaced kidney. (Normal.)

DIED April 17-1914 Abscess of lung. contributory- Pulmonary Tuberculosis.

Reg. No., 1603, App. No., 1437, Admitted, July 28, 1909, Born, July 22, 1889, Birthplace, Italy
Name, Augustina Boggiola, Color, White, Sex, female, Age, 20 years, months, 6 days, Residence, Oakland, Co., Alameda.
Parentage: Father living, yes, Dead, , Occupation, laborer, Nationality, Italy, Age at birth of this child, 22,
" Mother " yes, " , " housewife, " Italy, " " " 19.
Blood relationship of Parents, none, Conjugal relation, (not good-) - single
Relatives or Ancestors similarly afflicted,
" " otherwise afflicted,
" " intemperate, father & grandparents.
Heriditary influences, not good
Labor, ordinary, Delivery, full time
First child of Parents. Condition of other children, O.K.
Alleged Cause of Deficiency, prenatal., Date of recognition, at age of 10 years.
Degree of deficiency at admission, , Abnormalities, spastic paraplegia of both legs.

Physical condition: General development, well-built., Skin, O.K.
Hair, infested with pediculi, Sight, O.K, Hearing, O.K.
Smell, , Taste, , Touch,
Heart action, etc., O.K., Pulse, O.K. 90., Circulation,
Lung action, O.K., Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, fairly clean., Teeth, some decayed.
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, can understand a little English- more Italian - can count to 10.
Locomotion, clumsily: spastic paraplegia of both legs, Speech, not very intelligible - a few words can be understood. Temperament,
Diseases: Measles? yes, Scarlatina? , Whooping Cough? yes- at 2½ years Vaccination? yes, in 1891., Epilepsy?
" Hysteria? , Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

P. G. F. died of apoplexy - age unknown.
P. G. M. " " old age.
M. G. F. living.
M. G. M. died of peritonitis - age unknown.

DIED May 29-1911- Pulmonary Tuberculosis.
(Buried in Home cemetery)

Reg. No., 1605, App. No., 1435, Admitted, July 28, 1909, Born, June 1st, 1864, Birthplace, Contra Costa Co.
Name, Mary Ann Havey, Color, white, Sex female, Age, 45 years, months, days, Residence, San Francisco, Co., San Francisco
Parentage: Father living, no, Dead, , Occupation, farmer, Nationality, Ireland, Age at birth of this child, 50,
" Mother " no, " , " housewife, " Ireland, " " " 40,

GENERAL HISTORY AND REMARKS:

P. G. F. & M. living.
M. G. F. shot at age of 50 years.
M. G. M. living.

Developed enlarged cervical glands during latter part of October 1909: was given hypodermic injections of Tuberculin Residue + serial dilution no. 1 (2/1000 mg) with an increasing dose of 2 minims every 5 days. after 7 8 injections she improved so rapidly that the treatment was discontinued. Began Tuberculin Residue treatment, again - January 17, 1910- as the glands have begun to enlarge again. Discontinued treatment July 1910 owing to slight local reaction at site of inoculation

April 13, 1912 She had German measles- complication - acute bronchitis
Mar. 16-1915 Tonsillectomy & adenoidectomy - Dr. Butler

Reg. No., 1619 , App. No., 1210 , Admitted, August 16, 1909. , Born, April 20, 1899 , Birthplace, San Joaquin Co.
Name, Florence Carter , Color, white. , Sex, female , Age, 10 years, 3 months, 26 days, Residence, Lodi , Co., San Joaquin Co.
Parentage: Father living, no , Dead, , Occupation, farmer , Nationality, California , Age at birth of this child, 38 years ,
" Mother " yes. , " , " housewife , " California , " " " 35 years ,
Blood relationship of Parents, , Conjugal relation, single.
Relatives or Ancestors similarly afflicted, one sister:- one brother in this Home
" " otherwise afflicted,
" " intemperate,
Heriditary influences,
Labor, ordinary , Delivery,
child of Parents. Condition of other children, a deceased sister feeble minded: one brother, a Mongolian imbecile
Alleged Cause of Deficiency, congenital , Date of recognition, At age of 1 year.
Degree of deficiency at admission, , Abnormalities, Mongolian type of imbecile: eyes- tongue- hands:
Physical condition: General development, stunted in growth- fairly - well nourished. , Skin,
Hair, OK. demi-blonde , Sight, weak- sometimes cross- eyed. , Hearing,
Smell, OK , Taste, , Touch,
Heart action, etc., systolic murmur at apex. (organic). , Pulse, 104- excited , Circulation,

Educational attainments at admission, can talk little but not distinctly: understands a command.
Locomotion, , Speech, not distinct- , Temperament,
Diseases: Measles? yes- 1909. , Scarlatina? yes- , Whooping Cough? , Vaccination? no. , Epilepsy?
" Hysteria? , Chorea? Otitis Media during an attack of pneumonia. 3 yrs of age.
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

P. G. F. died at age of 89 years - cause unknown.
P. G. M. living
M. G. F. died at age of 63 years - stomach trouble.
M. G. M. " " " 73 years - pneumonia.
Father died of spinal trouble at age of 48 years.

On March 5/10 she was sent to the hospital - on account of fever & general malaise - with the rising temperature every afternoon - the murmur (systolic) was accentuated - heart action poor. She was put on tonics & stimulants - with counterirritation & cool applications over precordia: also on antipyretics & sponges or mustard packs to reduce fever. - which kept up varying 101 to 103° (rectal) at times. She improved slowly - and after her temperature remained normal for a week to 10 days she was discharged on May 22/10. On July 13/10, she was sent to the hospital on account of indigestion & chronic pyorrhoea - She was very fretful & restless for 2-3 days - especially at night. Her temperature rose to 103° (rectal) on July 17th - but came down gradually - & remained normal from July 21st to July 25th when she passed away. On morning of July 21st - it was observed that she could not raise or move her left arm or shoulder - neither were any reflexes present: the left pupil was widely dilated: an indefinite Kernig's sign was obtained on the left side. - & she was hypersensitive although not restless when left undisturbed - On July 23 & 24th she was able to pronate her hand (left) & flex arm at the elbow - (showing that the deltoid & coraco-brachialis has regained their activity again - but she could not flex her fingers - nor flex her hand on her wrist. She resisted painful stimulation of shoulder - & of hand - The condition remained unchanged. On morning of July 24 - respirations became rapid & on examination of chest - beginning broncho-pneumonia was revealed at upper lobe of left lung & middle lobe of rt. lung. In spite of all supportive treatment - her heart action became weaker - & the posterior bases of her lungs became involved. She gradually sank - and passed away at 9:35 A.M. July 25th - /10.

DIED July 25 - 1910

Remains shipped to Lodi (via Santa Rosa) at request of mother

Cause of death - Bronchopneumonia - contributory - chronic mitral regurgitation

Reg. No., 1592, App. No., 1424, Admitted, June 22, 1909, Born, August 8, 1896, Birthplace, Santa Paula, Cal.
Name, Clara M. Stille, Color, female, Sex, White, Age, 12 years, 10 months, 14 days, Residence, Santa Paula, Co., Ventura,
Parentage: Father living, yes, Dead, , Occupation, farmer, Nationality, Germany, Age at birth of this child, 39,

" Hysteria? , Chorea? Small-pox (?) yes.
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Nothing is known of grandparents - all died of old age -

Sent to hospital September 30, 1910 - on account of fever - examination of chest revealed râles at both apices - accentuated breath sounds - indicative of tubercular process. Her fever dropped to normal on October 3, 10 but steadily rose again to 103^{2} October 4, 10. On morning October 5, 10 - it was 102^{8} - pulse 134 - She had sat up in bed eating her breakfast at 7:30. & when seen in the tent at 9:15 was resting comfortably. But on going out to tent at 9:25 A.M. - she was found lying with face down on bed - facing foot of bed & on examination it was found that she had evidently just passed away.

DIED October 5, 1910. Remains shipped to Santa Paula.

Cause of death - acute pulmonary tuberculosis.

GENERAL HISTORY AND REMARKS:
P.G.F. living - age 65 years -
P.G.M. died at age of 65 years - accidental poisoning.
M.G.F. living
M.G.M. living

She was taken ill on May 19 1911 - vomiting constipation: considerable tympanites. On examination at our hospital she was found to have a hectic temperature. There was no subsidence of the tympanites for at least 10-14 days which heralded an attack of diarrhoea. This condition continued with some abatement for several days only to be followed with vomiting - & inability to retain food even of the most easily digested variety. A diagnosis of tubercular peritonitis was made - which was confirmed by the continuous fever - night sweats & gradual emaciation. She became weaker each day - & passed away on the evening of August 12, 1911.
Diagnosis - cause of death - Tubercular peritonitis.
Remains shipped to Paso Robles August 13, 1911.

DIED Aug. 12 - 1911 - Tubercular Peritonitis.

GENERAL HISTORY AND REMARKS:

P.G.F. & M. living
M.G.F. died of pneumonia - age unknown.
M.G.M. living

On December 30/09 she appeared quite ill & on taking her temperature was found to be 103^{2}. examination of chest revealed beginning pneumonia of left lobe posteriorly & right upper lobe anteriorly. In spite of her purgatives her temperature rose to 108° at 3 A.M. December 31/09. She was given mustard packs, which brought down her temperature 2-3° each time they were given. On Jan 1/10 at 6 AM her temperature was 105° & she was sent to the hospital. She failed gradually - running a temperature from 99° to 104^{2} at 5 P.M. - her lung condition clearing up on the right side but not on the left lobe. She developed a marked rigidity of hands & extremities but showed no further signs of symptoms of meningitis.

DIED January 7/10 - Diagnosis Broncho-pneumonia.
Buried in the Home Cemetery, January 10, 1910.

GENERAL HISTORY AND REMARKS:

P. G. F. died at age of 68 years - paralysis.
P. G. M. living (B).
M. G. F. died at age of 54 years - heart failure
M. G. M. living (C.)

She had been in the hospital on & about October 29th to November 1st for an attack of indigestion - was running a hectic temperature for several days: was inclined to be constipated & treated with good results.

On afternoon of November 22/09 she seemed feverish - & it was found that her temperature was 104°. - She had been taking her food well up to this time - & her bowel movements appeared to be normal in color & consistency. Active treatment in the way of tepid mustard baths: internally sweet spirits of nitre & spirits mindereri were given to allay the fever: & she was given Tab. Calomel Arom. gr. ½ in divided doses of gr 1/10 each every ½ hour - with the result in light green pasty semiliquid stools. Her temperature kept rising in spite of the baths & the highest was 103^{2} a hour & half before her death. She was examined carefully & beyond a slight coryza - no signs in throat or lungs were found to point to a beginning pneumonia except rapid respirations. Her temperature would fall 2-3° after the baths but soon rose again: & she gradually passed away - October 23/09.

DIED October 23/09 - buried in Home Cemetery November 24/09.

Postmortem notes:- autopsy held 5½ hours after death: body fairly well nourished: rigor mortis partially set in: hypostatic congestion in back & buttocks & dependent portion of limbs: Abdominal wall has a greenish discoloration.

Thorax - small area of consolidation about upper lobe posteriorly of right lung: rest of lung crepitant. No adhesions. - hypostatic congestion at base of lower lobe of left lung posteriorly & at base of lobe (lower) of right lung. - Also a small area of consolidation at apex of left ~~lung lobe~~. Enlarged ant. bronchial glands. Heart - pericardial cavity contains a small amount of serous fluid (clear): heart normal in size: right auricle filled with an organized clot: left ventricle contained a small organized clot: fresh vegetations on mitral valve - aortic valves congested.

Abdomen - appendix 1½ in. long: liver normal in size & OK. Left kidney - cortex pale: pyramids slightly congested: right kidney OK. Enlarged mesenteric glands about ileo-caecal junction: mesentery studded with glands.

Diagnosis: Beginning broncho-pneumonia with complicating acute endocarditis: & possibly tuberculosis (as indicated by enlarged glands in thorax & mesentery.)

Reg. No., 1656 , App. No., 1448. , Admitted, October 20/09. , Born, not known. , Birthplace, Los Angeles
Name, Jennie Mendoza. , Color, white , Sex, female , Age, 5 years, months, days, Residence, Los Angeles. , Co., Los Angeles ,

Ninth child of Parents. Condition of other children, normal.

Alleged Cause of Deficiency, , Date of recognition, at 4 years of age.

Degree of deficiency at admission, , Abnormalities, Mongolian type of imbecile - drools slightly

Physical condition: General development, stunted - well nourished, Skin, O.K.

Hair, brown - O.K., Sight, O.K., Hearing, O.K. -

Smell, O.K., Taste, O.K., Touch, O.K.

Heart action, etc., O.K., Pulse, 92 - O.K., Circulation,

Lung action, O.K., Respiration per m., Chest mea. inspr., in., expir., in., expan., in.

Tongue, coated., Teeth, decaying.

Menstruation: Regular? Irregular? Scanty?

" Painful? Peculiarities of, First menstruated at what age?

" Nervous and Mental Phenomena of,

Educational attainments at admission, cannot read, write or cipher: understands a command: can commit words to memory.

Locomotion, normal., Speech, poor articulation, Temperament,

Diseases: Measles? , Scarlatina? yes, Whooping Cough? , Vaccination? no., Epilepsy?

" Hysteria? , Chorea?

Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

P. G. F. died at age of 90 years - old age.
P. G. M. " " " " 70 years - cause unknown.
M. G. F. " " " " 86 years - cause unknown.
M. G. M. " " " " 50 years - cause unknown.

Helen was sent to the hospital on May 1, 1910 on account of general malaise - with some fever - On examination it was discovered that a murmur replacing the 2nd sound - & heard at the aortic area was present - at times it was quite accentuated - especially when her temperature rose in the afternoon: A diagnosis of acute endocarditis was made - & treatment was instituted - as viz - hyperpyretics - i.e. tepid sponges: mustard packs etc - cardiac tonics - & ice - over the precordia to relieve the tachycardia - also counterirritation over precordia. Her temperature persisted - ranging from a normal temperature in A.M. to 102° to 103° at night - pulse never more than 132 - 140 per minute. On May 9 - broncho pneumonia at base & in the mid axillary line of right lung set in - rapidly spreading to left lung & over the base anteriorly & posteriorly. She did not improve under treatment & began to sink on the 10th - A white blood count was made on May 9th - & was found to be 18,800. & The differential count was as viz

Polymorphonuclears 93%
Large Mononuclears 2%
Small " 5%.
Eosinophiles "

DIED She passed away on May 11, 1910 at 3:45 - P.M. - & the remains were shipped to San Mateo for burial at the request of the mother - on May 12, 1910: buried on May 13, 1910.

Cause - Acute Endocarditis. Contributory Broncho pneumonia

Reg. No., 1666, App. No., 1499, Admitted, November 5, 1909, Born, September 27, 1896, Birthplace, Michigan
Name, Goldie Amy Pettit, Color, White, Sex, female, Age, 13 years, 1 months, 9 days, Residence, Santa Clara, Co., Santa Clara,
Parentage: Father living, yes, Dead, , Occupation, laborer (chronic loafer), Nationality, Michigan, Age at birth of this child, 35 years,
" Mother " no, " yes, " washerwoman - housewife, " Minnesota, " " " 28 years,
Blood relationship of Parents, , Conjugal relation, (not of the best.) single
Relatives or Ancestors similarly afflicted, paternal brothers & sisters were weak mentally.
" " otherwise afflicted, mother was an epileptic: suicidal tendency runs in the family
" " intemperate,
Heriditary influences, not good.
Labor, don't know, Delivery, full term
fifth child of Parents. Condition of other children, 6 children died in infancy - weak, sickly & epileptic
Alleged Cause of Deficiency, mother, an epileptic prior to birth of child - & hard work, Date of recognition, at 6 - 7th year.
Degree of deficiency at admission, , Abnormalities, enlarged tonsils -

Physical condition: General development, slender - well-built, Skin, O.K.
Hair, demi-blonde - O.K., Sight, O.K., Hearing, O.K.
Smell, O.K., Taste, O.K., Touch, O.K.
Heart action, etc., a systolic murmur at apex: (transmitted) (mitral), Pulse, 114 - O.K., Circulation,
Lung action, O.K., Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, slightly coated., Teeth, some decayed.
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, went up to 4th grade - with fair results.
Locomotion, normal., Speech, perfect., Temperament,
Diseases: Measles? yes., Scarlatina? yes, Whooping Cough? Vaccination? 10 years ago., Epilepsy? spasms in 3rd year.
" Hysteria? , Chorea? Diptheria (?) yes.
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

P. G. F. committed suicide: also a sister & cousin committed same act.
P. G. M. died of a "tumor" - age unknown.
M. G. F. & M. - living & well.

August 10. Light attack of epidemic parotitis: discharged Aug. 16 - little constitutional disturbance.

May 21 - 1915. Tonsillectomy & adenoidectomy. Dr. Butler
Operated 7-11-18 by Dr. Butler & Dr. Fosdick. Anaesthetist Dr. Whittington
Double Partial Salpingectomy

Reg. No., 1667, App. No., 14734 1025 R Admitted, November 7, 1909, Born, April 27, 1892, Birthplace, Tennessee
Name, Basella Smith, Color, white, Sex, female, Age, 17 years, 6 months, 11 days, Residence, Pasadena, Co., Los Angeles,
Parentage: Father living, no, Dead, yes, Occupation, grinder, Nationality, West Virginia, Age at birth of this child, 46,
" Mother " yes, " , " seamstress, " Indiana, " " " 40,
Blood relationship of Parents, , Conjugal relation, single
Relatives or Ancestors similarly afflicted,
" " otherwise afflicted,
" " intemperate,
Heriditary influences,
Labor, ordinary, Delivery, at 7 months
Fourth child of Parents. Condition of other children,
Alleged Cause of Deficiency, as result of tonsillectomy at 7 years of age. (?), Date of recognition, at 7 years of age.
Degree of deficiency at admission, , Abnormalities, Hemiplegia (right side at 2 years of age). scar on right scapular region
Physical condition; General development, well-built, Skin, acne of face.
Hair, brown - O.K., Sight, , Hearing, O.K.
Smell, O.K., Taste, , Touch,
Heart action, etc., O.K., Pulse, 90 - O.K., Circulation,
Lung action, O.K., Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, slightly coated., Teeth, some decayed.
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, can read & write & count a little
Locomotion, awkward - due to right-sided hemiplegia, Speech, not distinct - due to paralysis., Temperament,
Diseases: Measles? yes - in 1905, Scarlatina?, Whooping Cough? yes - in 1900, Vaccination? not successful., Epilepsy? yes - at 17 months.
" Hysteria?, Chorea? Brain fever at 2 years of age.
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Father died 12 years ago - heart failure (51 years of age.
P. G. F. " at age of 65 years - heart failure
P. G. M. " " " " 75 years - old age
M. G. M. " " " " 50 " pneumonia
M. G. F. " " " " 58 " heart failure

Basella was admitted for the first time in February 1906: discharged January 1907.

DISCHARGED December 9, 1910 At request of mother. Improved.

Educational attainments at admission, can count to 16: knows the alphabet- has memorized some songs.
Locomotion, normal-, Speech, poor- stammers sometimes., Temperament,
Diseases: Measles? no, Scarlatina?, Whooping Cough? no, Vaccination? twenty years ago., Epilepsy?
" Hysteria?, Chorea? Has hemorrhoids.
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Father died at age of 64 years - heart disease.
Mother " " 70 years - cancer.
No history of grandparents to be obtained.

January 22/10 Sent to hospital for attack of indigestion - nausea - vomiting: She was observed to have dark colored stools - varying in degree of color from a dark sage-green to a tarry black stool - consistency of paste. No satisfactory abdominal examination could be made as she complained of pain wherever palpated - but principally in epigastrium. Stools were examined microscopically for Boas-Oppler bacilli & many were found: A test meal was given (Ewald) about January 31/10 - & tested for free hydrochloric acid - none found: but no lactic acid: much mucus: & bacteria resembling Boas Oppler bacilli. Since the gastric lavage she has been digesting her food - has put on some flesh - but the stools still continue to be dark in color: ~~she~~ is inclined to be constipated. Her mental condition is that of an insane person - as she howls & screams without any provocation. No drugs have been given - other than laxatives occasionally: but diet is carefully selected. Since September 24, 1910 she has been failing gradually. She has had several attacks of oedema of face & lower extremeties - sometimes involving both hands. These attacks would sometimes last a few days - sometimes a week or more in various degrees of severity. The last attack occurred in the latter part of October & continued until November 11 & 12th: involving face & lower extremeties in spite of all treatment. On and about September 24 - she had a severe vomiting spell & lax condition of bowels: the vomitus was the typical "coffee-grounds" while the stools were dark & tarry in character. At times her stools were quite normal in appearance and character - but this did not continue for any length of time. They become dark again several days before her death. On November 12th - she appeared to be suffering considerable pain & although given Morphine gr ¼ every 2-3 hrs - she did not seem to be eased until 12 M. - 1: & gradually sank - passing away at 5:15 A.M. November 13, 1910.

DIED November 13, 1910. Cancer of stomach.

Her remains were shipped to San Francisco - at request of Doctors' Daughters - represented by Miss McEwen.

Reg. No., 1684, App. No., 1515, Admitted, January 9, 1910., Born, May 5, 1894, Birthplace, San Luis Obispo.
Name, Mildred Frost, Color, White, Sex, female, Age, 15 years, 8 months, 4 days, Residence, San Bernardino., Co., Cal.

Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Mother died at age of 75 years - gastritis
Nothing is known of ancestral history.

Institution for Feeble-Minded, Eldridge, Cal.

Reg. No., 1742 , App. No., 1584 , Admitted, May 5, 1910. , Born, August 22, 1901 , Birthplace, Orbann Valley, Mendocino Co.

Name, Alice Evelyn Dollar. , Color, white , Sex, female , Age, 8 years, 8 months, 13 days, Residence, Winsor , Co., Sonoma Co,

Parentage: Father living, yes , Dead, , Occupation, laborer – , Nationality, California , Age at birth of this child, 26 ,

" Mother " yes. , " , " housewife. , " Oregon. , " " " 18 ,

Blood relationship of Parents, yes – paternal grandparents 3rd cousins. , Conjugal relation,

Relatives or Ancestors similarly afflicted, two maternal sisters are epileptics – one is now an inmate of the Home (entering June 1st 1912)

" " otherwise afflicted, twin brother of mother mentally deficient

" " intemperate,

Heriditary influences,

Labor, ordinary , Delivery, full term –

First child of Parents. Condition of other children,

Alleged Cause of Deficiency, fall at 9 mos. , Date of recognition, first spasm at 5 years.

Degree of deficiency at admission, epileptic & feebleminded. , Abnormalities, knee jerks slow –

Physical condition: General development, spare built – normal height. , Skin, O.K.

Hair, brown – , Sight, O.K. , Hearing,

Smell, , Taste, , Touch,

Heart action, etc., sounds O.K. , Pulse, 90 – irregular , Circulation,

Lung action, O.K. , Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.

Tongue, slightly coated , Teeth, slightly decayed.

Menstruation: Regular? Irregular? Scanty?

" Painful? Peculiarities of, First menstruated at what age?

" Nervous and Mental Phenomena of,

Educational attainments at admission, can read in 1st Reader – count to 30: draw a little

Locomotion, normal , Speech, perfect. , Temperament,

Diseases: Measles? , Scarlatina? , Whooping Cough? , Vaccination? no. , Epilepsy? yes. since 5 years.

" Hysteria? , Chorea? Dipthena ? yes in 1907

Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Grandparents are living.

August 24, 1912. Alice has just had a light attack of mumps, – admitted to hospital Aug 10, discharged Aug 12, as she could be treated in her hall. no malaise, fever for two days only.

Operated – Oct 14 1919 by Dr F.O. Butler, A.A. Thurlow, asst, Dr W.L. Whittington, anesthetist.
1. Double partial salpingectomy
for sterilization.

Reg. No., 1743, App. No., 1578, Admitted, May 6, 1910, Born, May 2, 1900, Birthplace,
Name, Alma Lena Hughes., Color, white, Sex, female, Age, 10 years, months, 4 days, Residence, Los Angeles, Co., Los Angeles.

" Hysteria? , Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Grandparents are dead - age & cause unknown.
Mother died at age of 81 years - heart failure.

On December 15, 1910 she was sent to the hospital - having some fever - cough: on examination she was found to be in the incipient stages of pulmonary tuberculosis - right lung being involved. She was placed in one of our tubercular cottages - & with symptomatic treatment improved slowly. She was discharged on July 3, 1911 - her temperature having been normal for some time - no cough; & the tubercular process having disappeared - except for dullness & some rales still being present. Has been sent to the hospital on April 16, 1912 - on account of fever & acute exacerbation of the tubercular process. From January 29, 1912 to February 19, 1912 - she had an attack of facial erysipelas - but fully recovered & seemed to be much improved physically until April 16, 1912 as stated above. She was sent to the hospital on the latter date as she seemed quite debilitated - had some fever and cough. She appeared to be regaining her strength & temperature gradually dropped until the morning of April 26th when her pulse became quite weak. Gradually she became unable to swallow her food - & seemed to fail very rapidly. She passed away on April 28th at 11:30 P.M.

DIED

Diagnosis:- Pulmonary tuberculosis
Remains shipped to Escondido - California - April 29th. at request of her father.

Reg. No., 1755, App. No., 1602, Admitted, June 11, 1910, Born, June 22, 1876, Birthplace, Oakland, California.

DIED July 8 - 1914. Tuberculosis of intestines & glands.

Reg. No., 1768, App. No., 1617, Admitted, July 1, 1910., Born, August 9, 1898, Birthplace, Guerneville
Name, Viola M. Gorman, Color, white, Sex, female, Age, 11 years, 10 months, 23 days, Residence, Santa Rosa, Co., Sonoma,
Parentage: Father living, yes, Dead, , Occupation, carpenter, Nationality, unknown, Age at birth of this child, unknown,
" Mother " yes, " , " housewife., " ", " " " ",
Blood relationship of Parents, unknown., Conjugal relation,
Relatives or Ancestors similarly afflicted,
" " otherwise afflicted,
" " intemperate,
Heriditary influences,
Labor, unknown., Delivery, unknown -
Third child of Parents. Condition of other children,
Alleged Cause of Deficiency, - following measles & typhoid she began to have epileptic seizures, Date of recognition, at 5 years of age.
Degree of deficiency at admission, feebleminded -, Abnormalities, nervous twitchings of limbs - more on right side -
Physical condition: General development, heavy-set -, Skin, acne of face & chest.
Hair, brown, Sight, , Hearing,
Smell, , Taste, , Touch,
Heart action, etc., OK, Pulse, rapid OK., Circulation,
Lung action, OK, Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, coated, Teeth, OK.
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, reached 4th grade - can read, write & count.
Locomotion, normal, Speech, perfect., Temperament, nervous
Diseases: Measles? yes., Scarlatina?, Whooping Cough? yes, Vaccination?, Epilepsy? minor -
" Hysteria?, Chorea?, Typhoid fever (?) yes.
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Nothing is known of family history.

She has been having on an average from 2-4 seizures a month within past three months - whereas there were as numerous as 16-19 in first two months after her admission. She has been on Strychnine Arsenate gr $\frac{1}{60}$ - & Calcium lactate gr v after meals: & was given Bromides after or during the time she was having seizures - either major or minor.

On February ~~24~~ 25, 1911 she was sent to the hospital on account of an eruption which was diagnosed as varicella. The lesions were not very numerous - but were found on her neck - trunk - chest & buttocks - & a few on her scalp. Her temperature at its highest mark was 100° (rectal) - until the morning of March 2, 1911 when it rose to 105° & by 8 P.M. it rose to 107^4 - pulse 110 - resp. 36. An examination of her chest was made but nothing was found except weak heart sounds - until the evening of March 3rd when râles (crepitant) could be heard at the bases of both lungs - more marked over the left lung posteriorly. She was extremely restless - & delirious most of the time. It was observed that since February 25th (i.e. night) - that she was very nervous - & restless: & was found wandering about the room - jumping up & down in bed -. On morning of March 4 - distinct bronchial breathing was heard over the left lung - right lungs almost free of râles - but heart sounds poor: some dullness over left lung at base posteriorly & in midaxillary line. Her temperature was reduced with mustard packs - quinine 45 grains given in 10 gr doses every 3 hrs during night: - ice cap to heart & to head: & she was also given stimulants and bromides & hyoscine hydrobromides for her extreme restlessness. Her temperature gradually dropped to 104° (rectal) at 4 A.M. - but gradually rose to 107° (just before she passed away. She became unconscious about 7 A.M. - & very weak - gradually growing weaker until she passed away at 1:05 P.M.
Her remains were shipped for ~~interment~~ to Santa Rosa - March 5/1911 at request of her mother.

A postmortem was held March 4, 1911 - 6 hours after death. Body well nourished - rigor mortis set in: hypostatic congestion well marked on back: & to some extent on buttocks. Some varicella scabs on trunk & arms.
Thorax: - fresh bands of adhesions found over right lung - at apex & base & between lobes: hypostatic congestion of lower right lobe of lung - no consolidation - adhesions between pericardium & left pleura: also present between parietal & visceral layers of left pleura: & over the remaining portion of left lung: left lung almost reduced to a mere band of fibrous adhesions - no distinct lobulation could be detected. Enlarged anterior bronchial glands - containing caseous deposits.
Heart: - pericardium containing 1-2 ʒ of clear serous fluid: heart small - flabby: wt. 4 oz. Small organized clots in both ventricles: fresh vegetations on mitral & tricuspid valves & some old ones on tricuspid: aortic valves congested.
Abdomen: - Liver large in size - pushing up into thoracic cavity: spleen normal: small mesenteric glands. Kidneys normal:
Cranium: - adhesions between dura mater & cortex. Small deposits of lymph along longitudinal & Rolandic fissures: fresh bands of adhesions found everywhere over convexity - sides & base of brain - & between convolutions: about 1/2 ʒ of clear serous fluid found in base of cranium: gray & white matter normal in proportion & lateral ventricles normal.

DIED

Cause of death: acute endocarditis with meningitis (possibly tuberculous - owing to fibroid phthisis): & secondary: - chicken pox (varicella)

Reg. No., 1769, App. No., 1613, Admitted, July 2, 1910, Born, March 1, 1869, Birthplace, Sonoma County
Name, Eunice Ballou, Color, white, Sex, female, Age, 41 years, 4 months, 1 days, Residence, Santa Rosa, Co., Sonoma,
Parentage: Father living, no, Dead, yes, Occupation, farmer, Nationality, Illinois, Age at birth of this child, 42 years,
" Mother " no, " yes, " housewife, " Pennsylvania, " " " 27 years.
Blood relationship of Parents, none, Conjugal relation,
Relatives or Ancestors similarly afflicted, no
" " otherwise afflicted, no
" " intemperate,
Heriditary influences,
Labor, unknown, Delivery,
Second child of Parents. Condition of other children,
Alleged Cause of Deficiency, mother was in a runaway accident during pregnancy, Date of recognition, from infancy
Degree of deficiency at admission, Abnormalities,

Physical condition: General development, well-built, Skin, scar of an indolent ulcer on right leg –
Hair, Sight, convergent strabismus – cataract of both eyes, Hearing,
Smell, Taste, Touch,
Heart action, etc., good, Pulse, O.K., Circulation,
Lung action, O.K., Respiration per m., Chest mea. inspr., in., expir., in., expan., in.
Tongue, slightly coated, Teeth, decaying.
Menstruation: Regular? never has – Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, can read & write a little – count to 100. & cipher a little –
Locomotion, slow – on account of sprained ankle, Speech, not very distinct, Temperament,
Diseases: Measles? yes, Scarlatina? no., Whooping Cough?, Vaccination? yes – in childhood, Epilepsy? no.
" Hysteria?, Chorea?
Diagnosis of, Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Father died at age of 50 years – cause – consumption
Mother " " " 64 years – " – heart trouble
Nothing is known of family history –

Reg. No., 1770, App. No., 1496, Admitted, July 4, 1910, Born, May 24, 1899, Birthplace, Des Moines - Iowa

Name, Della Kamp., Color, White, Sex, female, Age, 11 years, 1 months, 10 days, Residence, Downey, Co., Los Angeles.,

Parentage: Father living, yes, Dead, , Occupation, merchant, Nationality, Poland, Age at birth of this child, 27,

" Mother " yes, " , " housewife., " Germany, " " " 18.,

Blood relationship of Parents, none, Conjugal relation,

Relatives or Ancestors similarly afflicted, none

" " otherwise afflicted,

" " intemperate,

Heriditary influences,

Labor, ordinary, Delivery, full term

First. child of Parents. Condition of other children, normal

Alleged Cause of Deficiency, mother exposed to hardship & continuous anxiety during pregnancy, Date of recognition, from infancy

Degree of deficiency at admission, , Abnormalities, Mongolian type of imbecile

Physical condition: General development, undeveloped - short in stature, Skin, OK.

Hair, , Sight, OK., Hearing, OK.

Smell, , Taste, , Touch,

Heart action, etc., OK, Pulse, OK. rapid, Circulation,

Lung action, OK., Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.

Tongue, slightly coated, Teeth, fair

Menstruation: Regular? Irregular? Scanty?

" Painful? Peculiarities of, First menstruated at what age?

" Nervous and Mental Phenomena of,

Educational attainments at admission, can read a little - knows the alphabet & write a little

Locomotion, normal -, Speech, rapid - hoarse voice, Temperament,

Diseases: Measles? yes, Scarlatina?, Whooping Cough? yes -, Vaccination? yes - at 4 years., Epilepsy?

" Hysteria?, Chorea?

Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

P. G. F. & M. - living

M. G. F. - died at age of 38 years - suddenly - cause unknown.

M. G. M. - living

DISCHARGED January 3, 1911. At request of mother. Improved.

Reg. No. 1772, App. No., 1604, Admitted, July 6, 1910, Born, September 22, 1894, Birthplace, Redwood City
Name, Sarah A. Thermantini, Color, white, Sex, female, Age, 15 years, 9 months, 14 days, Residence, Oakland, Co. Alameda
Parentage: Father living, yes, Dead, , Occupation, farmer, Nationality, California, Age at birth of this child, 40 years;

" " intemperate,
Heriditary influences,
Labor, , Delivery, full term
Ninth child of Parents. Condition of other children, normal
Alleged Cause of Deficiency, anxiety on part of mother during pregnancy - due to father's absence, Date of recognition, at 9 years of age.
Degree of deficiency at admission, , Abnormalities,

Physical condition: General development, thin - sparely built, Skin,
Hair, thin - gray, Sight, , Hearing, defective
Smell, , Taste, , Touch,
Heart action, etc., O.K., Pulse, O.K. 84, Circulation,
Lung action, O.K, Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, broad - slightly coated, Teeth, decaying.
Menstruation: Regular? , Irregular? , Scanty?
" Painful? , Peculiarities of, , First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, can read large print - count to 10.
Locomotion, slowly - normal, Speech, , Temperament,
Diseases: Measles? yes - at 10 years Scarlatina? , Whooping Cough? yes at 10 years, Vaccination? , Epilepsy? no -
" Hysteria? , Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Family history unknown -

She was rundown physically when she was admitted to the Home. On January 19, 1911 she was observed to cough severely & was sent to the hospital: on examination râles over both bronchi were heard - & these increased until both lungs posteriorly over midscapular areas emitted accentuated breath sounds - râles - mucous & subcrepitant in type. On January 23, she was in a semistupor - sleeping all the time - markedly dyspnoeic. Her temperature at its highest was 103° (rectal) - pulse 110: on Jan. 22 - dropping to 102° at 5 P.M. She passed away suddenly at 6 P.M. January 23, 1911.

DIED

Diagnosis - capillary bronchitis

(Body shipped to San Francisco)

CASE BOOK **Institution for Feeble-Minded, Eldridge, Cal.** FEMALES

Reg. No., 1778, App. No., 1581, Admitted, August 5, 1910, Born, June 15, 1891, Birthplace, Los Angeles.
Name, Helen Burges, Color, white, Sex, female, Age, 19 years, 1 months, 21 days, Residence, Los Angeles, Co., Los Angeles,
Parentage: Father living, yes, Dead, no, Occupation, rancher, Nationality, France, Age at birth of this child, 45 years,
" Mother " no, " yes, " housewife, " Los Angeles, " " " 30 years.
Blood relationship of Parents, , Conjugal relation,
Relatives or Ancestors similarly afflicted, maternal brother insane – & uncle feebleminded.
" " otherwise afflicted,
" " intemperate,
Heriditary influences,
Labor, ?, Delivery, ?
child of Parents. Condition of other children, normal.
Alleged Cause of Deficiency, , Date of recognition, in 1898 – at 7 years.
Degree of deficiency at admission, , Abnormalities, costal arch bulges out quite prominently & high arch palate.
Physical condition: General development, slight – short in stature, Skin, pale – clear
Hair, black thin, Sight, OK –, Hearing, OK.
Smell, , Taste, , Touch,
Heart action, etc., OK – rapid, Pulse, OK – rapid., Circulation,
Lung action, OK., Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, slightly coated, Teeth, decaying. – gingivitis
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, can read newspapers – write some.
Locomotion, normal., Speech, perfect – hesitating, Temperament,
Diseases: Measles? no, Scarlatina? no, Whooping Cough?, Vaccination? ?, Epilepsy? yes – dementia:
" Hysteria? , Chorea?
Diagnosis of, Insane – (Tuberculosis healed), Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Mother died at age of 26 years :– cause – tuberculosis
P. G. F. " " " " 34 " :– cause – injuries received as result of a fall.
P. G. M. living
M. G. F. died at age of 80 years :– cause – apoplexy.
M. G. M. " " " " 36 years :– cause – tuberculosis

May 1913. To hospital with Bronchopneumonia Gastrointestinal toxemia, and tuberculosis? Tuberculosis later verified.
Discharged from hospital July 29 – 1914 with healed pulmonary tuberculosis, but violently insane at times. Screaming, fighting etc. and had to be restrained, but with great difficulty.

DISCHARGED

Transferred to Southern California State Hospital. Oct. 28 – 1914 – Insane, gradually growing worse.

Reg. No., 1779, App. No., 1630, Admitted, August 6, 1910, Born, July 12, 1903, Birthplace, San Francisco
Name, Helen Sopie Couteron, Color, white, Sex, female, Age, 7 years, months, 25 days, Residence, San Francisco, Co., San Francisco

GENERAL HISTORY AND REMARKS:

P. G. F. cause of death unknown.
P. G. M. died at age of 75 years - cause of death unknown.
M. G. F. " " early age - typhoid fever
M. G. M. " " age of 72 years - pneumonia.

DIED January 12, 1915, 6^{30} P.M. Chronic Parenchymatous Nephritis., Myxedema

Post Mortem held 19 hrs after death. Rigor mortis slight.
Abdominal wall very fat ($1\frac{3}{4}$ in.) Bowels filled with gas, small amt fluid in cavity.
Lungs - No adhesions, no fluid in chest. Cavity small.
Left weight 13 ℥. normal.
Right weight 11 ℥. normal. Lordosis.
Pericardium small amt. of fluid.
Heart, organized clot in rt ventricle, mitral valve small vegetative growths.
Tricuspid valve normal, Semi Lunar normal
Aorta - ascending; descending sclerotic.
Abdomen, Stomach congested on right and under surface otherwise normal.
Intestines, small practically normal, Two constrictions in ascending Colon also constriction at Splenic and Sigmoid flexures.
Liver, weight 2 lbs 9 ℥. - 41 ℥. friable
Spleen, Wt $2\frac{1}{2}$ ℥ practically normal tissue.
Pancreas, normal.
Kidneys, Left weight 4 ℥. Cuts with resistance, Capsule strips off readily, Contains numbers of cysts in parenchyma.
Right weight 4 ℥. Cuts with resistance Capsule strips off readily, Contains cysts.
Pelvis, Uterus practically normal, Right Ovary, small cyst, Left Ovary normal.
Bladder small & contained urine.
Head. Brain Wt 2 lbs 8 ℥. - 40 ℥. Dura adhered to skull.
Tongue large thickened in posterior $\frac{2}{3}$.
Neck short and thick, Thyroid atrophied. Myxedema. Height 4 ft.

Heriditary influences,
Labor, ordinary, Delivery, full term
Sixth child of Parents. Condition of other children, sister & brother normal
Alleged Cause of Deficiency, epilepsy, Date of recognition, at 1 year.
Degree of deficiency at admission, , Abnormalities, microcephalic head.

Physical condition: General development, well-developed -, Skin,
Hair, dark - OK., Sight, OK., Hearing,
Smell, , Taste, , Touch,
Heart action, etc., good -, Pulse, O.K. rapid. 96., Circulation,.
Lung action, good, Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, OK., Teeth,
Menstruation: Regular? has not menstruated since she entered. Ir~~regular~~? diagnosis of pregnancy made Nov 29/10. Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, understands a command in English & Spanish to a certain extent.
Locomotion, normal, Speech, does not talk., Temperament,
Diseases: Measles? yes, Scarlatina? no -, Whooping Cough? no., Vaccination? no., Epilepsy? since 1 year.
" Hysteria? , Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

M. G. F. living
M. G. M. died at age of 55 years - rheumatism.
P. G. F. & M. - dead - cause unknown.

She was delivered of a male child on April 3, 1911.

Reg. No., 1793, App. No., 1651, Admitted, September 12, 1910, Born, February 23, 1906, Birthplace, Stockton

Name, Rosa Alice Belveal, Color, White, Sex, female, Age, 4 years, 6 months, days, Residence, Stockton, Co., San Joaquin,

Parentage: Father living, Yes, Dead, , Occupation, father, Nationality, Kansas, Age at birth of this child, 25 years,

" Mother " Yes, " , " housewife, " Pennsylvania, " " " 19 years,

Blood relationship of Parents, , Conjugal relation,

Relatives or Ancestors similarly afflicted,

" " otherwise afflicted, paternal uncle had epilepsy.

" " intemperate,

Heriditary influences, good.

Labor, ordinary, Delivery, full term

Second child of Parents. Condition of other children,

Alleged Cause of Deficiency, spinal meningitis, Date of recognition, at one year - after attack of meningitis.

Degree of deficiency at admission, , Abnormalities,

Physical condition: General development, short - well-developed., Skin, fair - clear.

Hair, fair - O.K., Sight, O.K., Hearing, ?

Smell, , Taste, , Touch,

Heart action, etc., O.K., Pulse, 100 - regular, Circulation,

Lung action, O.K., Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.

Tongue, slightly coated., Teeth, fair.

Menstruation: Regular, Irregular? Scanty?

" Painful? Peculiarities of, First menstruated at what age?

" Nervous and Mental Phenomena of,

Educational attainments at admission, is a mute - does not seem to hear -

Locomotion, just like a child beginning to walk, Speech, does not talk -, Temperament,

Diseases: Measles? Yes, Scarlatina?, Whooping Cough?, Vaccination? no., Epilepsy?

" Hysteria?, Chorea?

Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

P. G. F. living.
P. G. M. died at age of 48 years - cause anemia.
M. G. F. died at age of 41 years - " - drinking ice water (?)
M. G. M. died at age of 45 years - " - cancer of uterus

We experienced a great difficulty in trying to feed her - would not eat for several days after her admission - but on 4-5 day we discovered that she was very fond of tomatoes: in a few days - coaxed her to eat bread with meat gravy: or fruit jam - Gradually in course of 2 weeks or more - we succeeded in getting her to eat potatoes - cereals & other soft foods: would not take broth or milk unless given with bread.

She had an attack of "green diarrhoea beginning March 4, 1911 - which gradually responded to treatment - and she was discharged on April 8, 1911 - yet being still on a restricted diet.

Examination made Apr. 10th 1914 by Dr Brousseau Physical age 8. Mental age 1.

1-15-16. Sent to Hospital with Scarlet Fever.
3-7-16. Discharged fr. Hospital. Made a good recovery -

Reg. No., 1791 App. No., 1649, Admitted, September 11, 1910., Born, Unknown -, Birthplace, Los Angeles.
Name, Profeta Munte (Chavez), Color, white, Sex, female, Age, 11 years, ? months, days, Residence, Los Angeles, Co., Los Angeles.

GENERAL HISTORY AND REMARKS:

Father died at age of 31 years - tuberculosis
P. G. F. killed in Civil War
P. G. M. died at age of 50 years - pneumonia
M. G. F. " " " 57 years - influenza
M. G. M. living - age 80 years.

She was nursing her third child - age 7 months when she entered: "dried" up breasts successfully - under treatment with Ung. Belladonnae - & massage: & applications of Ol. Ricini (warm) -

An operation of double salpingectomy was performed August 12, 1911 - under chloroform & ether sequence anaesthesia - by Dr. Alice M. Woods of Children's Hospital San Francisco - assisted by Dr. J. Larson & A. M. G. McBean - the (anaesthetists being Dr. Wm. H. McBean & E. Gray. The patient had an uninterrupted recovery and was dis-charged from the hospital 4 weeks later. She menstruated a week later than her expected period.

December, 1911 - since her operation she has had only nocturnal seizures - menstrual periods more regular.

Reg. No., 1814, App. No., 1669, Admitted, October 11, 1910, Born, August 20 1868, Birthplace, Sacramento Co.

Name, Jeanette Weir, Color, white, Sex, female, Age, years, months, days, Residence, Sacramento, Co., Sacramento,

Parentage: Father living, no, Dead, yes, Occupation, farming, Nationality, Scotland, Age at birth of this child, 30 years,

" Mother " no, " yes, " housewife, " Ireland, " " " 25 years,

Blood relationship of Parents, none, Conjugal relation,

Relatives or Ancestors similarly afflicted,

" " otherwise afflicted,

" " intemperate,

Heriditary influences,

Labor, ordinary, Delivery, full term

Third child of Parents. Condition of other children, normal apparently.

Alleged Cause of Deficiency, unknown., Date of recognition, since 30 years of age when epilepsy began.

Degree of deficiency at admission, Abnormalities, (lobes of ears) adherent to head-

Physical condition: General development, well-developed., Skin, bromide acne - swarthy-sallow complexion

Hair, dark - heavy., Sight, Hearing,

Smell, Taste, Touch,

Heart action, etc., Pulse, Circulation,

Lung action, Respiration per m., Chest mea. inspr., in., expir., in., expan., in.

Tongue, Teeth, wears upper plate - lower decaying.

Menstruation: Regular? Irregular? Scanty?

" Painful? Peculiarities of, First menstruated at what age?

" Nervous and Mental Phenomena of,

Educational attainments at admission, has had a common school education

Locomotion, normal - slow on account of sprained ankle, Speech, slow - hesitating at times, Temperament,

Diseases: Measles? yes., Scarlatina?, Whooping Cough?, Vaccination? yes., Epilepsy? yes.

" Hysteria?, Chorea?, Small-pox.? yes.

Diagnosis of, Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Mother died at age of 57 years - congestion of lungs.
Father " " " " 61 years - typhoid. Nothing is further known of family history.

She is irrational more or less all the time - especially after a seizure. Soon after her admission she began to vomit - more often - regurgitated her food. She was given a selected diet - put on bitter stomachics but condition continued - worse in her periods of dementia. She was sent to hospital & a test breakfast was given & stomach washed 1 hour later - Very little of contents was obtained - tested for free HCl - negative. Her stomach was washed again two days later & another negative test obtained. She was put on albumin water - then, liquid - finally solid food: also given Acid Nitrohydrochloric dil. m v after meals with good results as she has retained her food well - all the time she was in the hospital from December 19-21, 10: she was quite demented - resistive and inclined to wander about if not restrained.

On January 8, 1911 - while in irrational state of mind she put her left hand on a heater - sustaining slight superficial burns.

July, 1911: she has become more demented - and has grown quite emaciated since her admission.

December, 1911: - at times she has been quite rational - although still somewhat emaciated - although her physical health seems good - appetite good.

Died - Sept. 8 - 1916.

Reg. No., 1815, App. No., 1672, Admitted, October 14, 1910, Born, January 2, 1883, Birthplace, San Francisco

Name, Drean Edna Von Helms, Color, White, Sex, female, Age, 27 years, 9 months, 12 days, Residence, San Francisco, Co., San Francisco,

Parentage: Father living, yes, Dead, , Occupation, cook, Nationality, Germany, Age at birth of this child, 29 years,

" Mother " no, " yes, " , " California. , " " " 23 years,

Blood relationship of Parents, none, Conjugal relation,

Relatives or Ancestors similarly afflicted,

" " otherwise afflicted,

" " intemperate,

Heriditary influences,

Labor, ordinary, Delivery, full term.

Fourth child of Parents. Condition of other children, normal

Alleged Cause of Deficiency, injury to head- from a fall on an iron hopper. Date of recognition, at 4-5 years of age.

Degree of deficiency at admission, idio- imbecile, Abnormalities,

Physical condition: General development, well-developed-, Skin, fair- O.K.

Hair, brown- fair., Sight, O.K., Hearing, deficient.

Smell, , Taste, , Touch,

Heart action, etc., O.K., Pulse, , Circulation,

Lung action, O.K, Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.

Tongue, slightly coated., Teeth, slightly decayed-

Menstruation: Regular?, Irregular?, Scanty?

" Painful?, Peculiarities of, First menstruated at what age?

" Nervous and Mental Phenomena of,

Educational attainments at admission, writes her own name- can read a little- understands a simple command.

Locomotion, normal, Speech, seldom speaks- not perfect., Temperament,

Diseases: Measles? yes., Scarlatina?, Whooping Cough? yes., Vaccination? yes., Epilepsy?

" Hysteria?, Chorea?

Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Mother died at age of 50 years- acute pulmonary edema.
P. G. F. " " " " 72 years- cause unknown
P. G. M. " " " " 75 years- " "
M. G. F. " " " " 71 years- " "
M. G. M. " " " " 45 years- " ".

On January 23, 1912- she was taken to our hospital as she had a severe cough- fever- anorexia. Examination of her chest revealed congestion of both lungs- & as she convalesced her lung condition remained unchanged- in so much that râles & dullness was perceived at both apices. Her condition was diagnosed as incipient pulmonary tuberculosis. Up to June 1st- she has shown very little improvement- still running a hectic temperature- & on account of the latter she has been kept in bed- although in the past 2-3 months she has been allowed to sit up in a chair when her temperature was normal- but put back to bed as there would be a rise that night. At times she is able to retain only liquid nourishment- & on several occasions all medicinal treatment in the line of tonics had to be discontinued- except stimulants given by hypodermic injections.

From this time she failed gradually becoming very weak & emaciated.

DIED October 18. 1912. pulmonary tuberculosis: body shipped to San Francisco.

Reg. No., 1816. , App. No., 1673 , Admitted, October 19, 1910. , Born, January 19, 1883 , Birthplace, Bridgeport - Mendocino Co

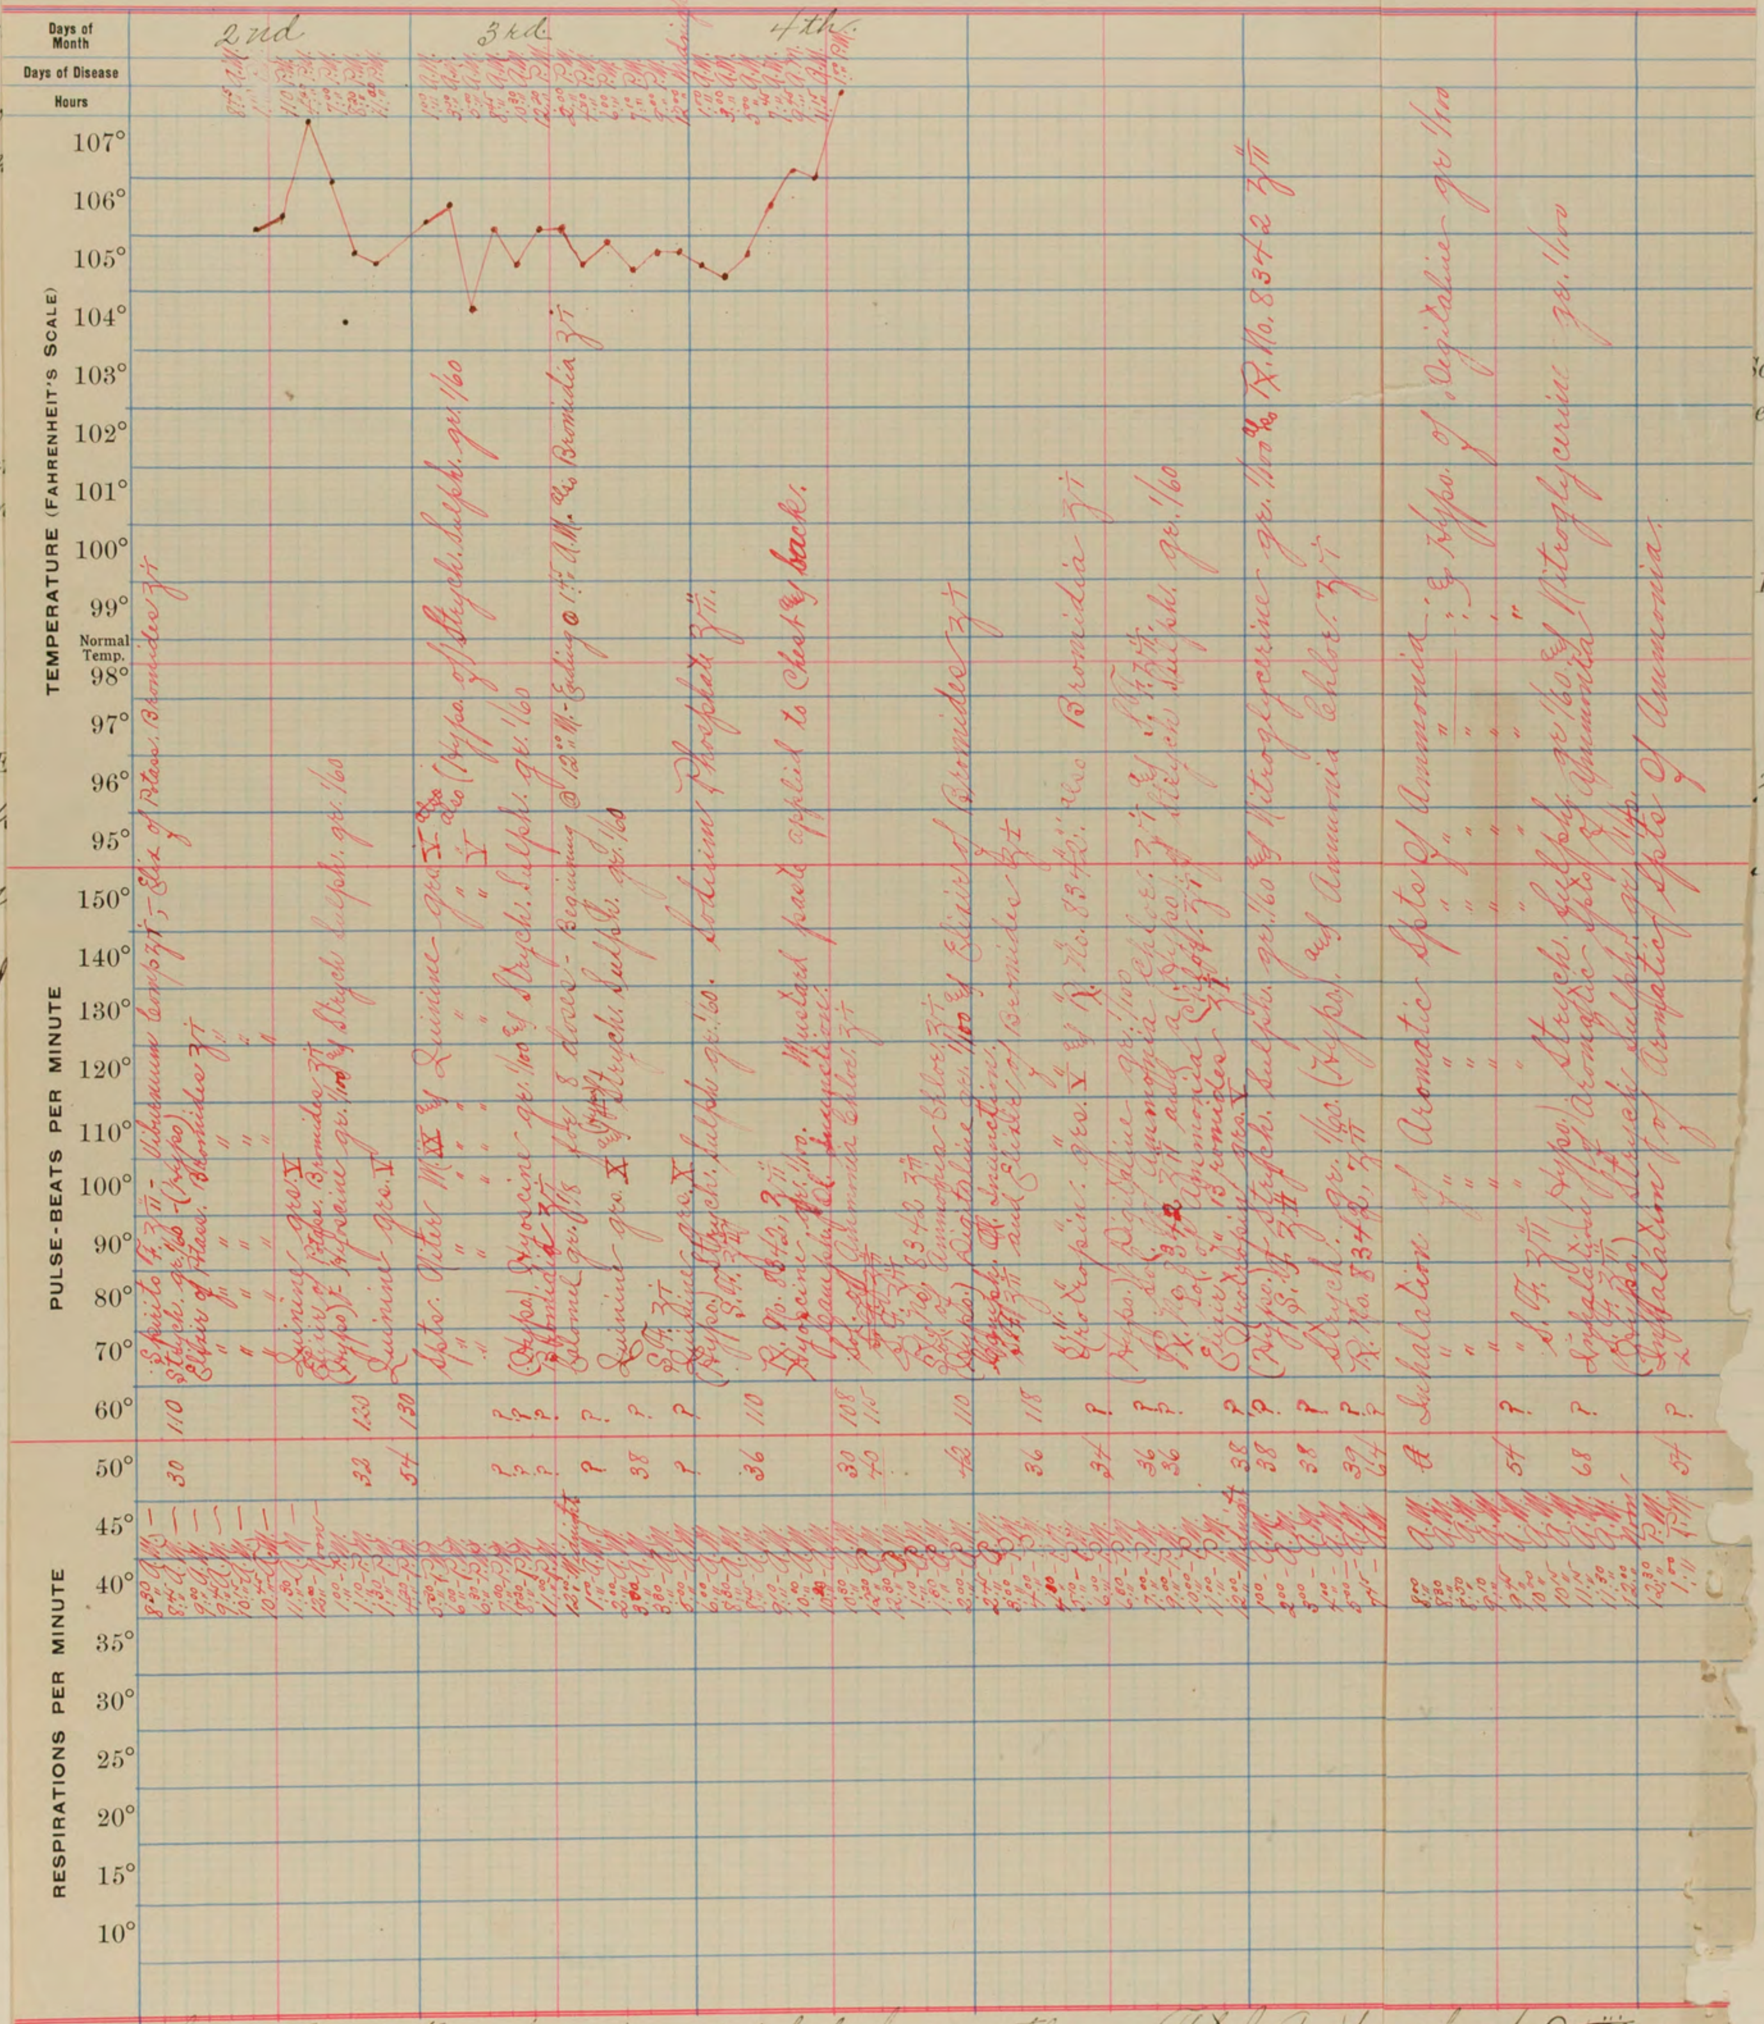
Name Miss Viola German Ward Judah Hall Date March 2nd - 1911 -

Disease Remarks:



Urine Small Amounts of urine voided frequently. Total Amt. about O VI ss
Defecation 3 Large liquid dark stools the 1st & 2nd day. Small, loose stools the 3rd day.

The California Home for

CLI

Reg. No., 1818 , App. No., , Admitted, October 22, 1910 , Born, December 24, 1899 , Birthplace, California
Name, Violet Schaeck , Color, dark , Sex, female , Age, 10 years, 9 months, 28 days, Residence, Long Beach , Co., Los Angeles.,
Parentage: Father living, Yes. Dead, , Occupation, wor Half breed + Indian (?) , Nationality, America , Age at birth of this child, ? ,
" Mother " ? , " , " unknown , " ? , " " " ? ,
Blood relationship of Parents, , Conjugal relation, ?
Relatives or Ancestors similarly afflicted,
" " otherwise afflicted,
" " intemperate,
Heriditary influences,
Labor, ? , Delivery, ?
? child of Parents. Condition of other children, ?
Alleged Cause of Deficiency, unknown. , Date of recognition, ?
Degree of deficiency at admission, moral imbecile – nymphomania. , Abnormalities,

Physical condition: General development, well-built. , Skin, swarthy
Hair, dark – coarse. , Sight, , Hearing,
Smell, , Taste, , Touch,
Heart action, etc., , Pulse, , Circulation,
Lung action, , Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, , Teeth,
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, can count to 100 – draw some – can understand simple command.
Locomotion, normal , Speech, lisps. , Temperament,
Diseases: Measles? , Scarlatina? , Whooping Cough? , Vaccination? no. , Epilepsy?
" Hysteria? , Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Nothing is known of family history – mother was a white – the father is an Indian. (?).

She is a moral degenerate – nymphomaniac: persists in having intercourse with negros: will stray from home.

Operated 1/8/20 by Drs Butler & Thoren anaes. Dr Thurlow
1. Double partial salpingectomy for sterilization

Reg. No., 1819, App. No., 1680, Admitted, October 27, 1910, Born, February 28, 1885, Birthplace, Washington
Name, Ada Ward., Color, white, Sex, female, Age 25 years, 7 months, 29 days, Residence, Cloverdale, Co., Sonoma.,
Parentage: Father living, yes, Dead, , Occupation, farmer, Nationality, Arkansas, Age at birth of this child, 43 years,
" Mother " yes., " , " housewife., " England, " " " 33 years.,
Blood relationship of Parents, none., Conjugal relation,
Relatives or Ancestors similarly afflicted,
" " otherwise afflicted,
" " intemperate,
Heriditary influences,
Labor, ordinary, Delivery, full term
Seventh child of Parents. Condition of other children, normal
Alleged Cause of Deficiency, from sickness – & epilepsy, Date of recognition, at one year of age.
Degree of deficiency at admission, epileptic & feebleminded., Abnormalities, – hemiplegia (left) from birth

Physical condition: General development, slender – build., Skin,
Hair, , Sight, myopic., Hearing,
Smell, , Taste, , Touch,
Heart action, etc., , Pulse, , Circulation,
Lung action, , Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, , Teeth,
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, can count to 20: understands a command. – recognizes black, white & red colors: knows alphabet.
Locomotion, drags left foot (hemiplegia)., Speech, perfect., Temperament,
Diseases: Measles? yes, Scarlatina?, Whooping Cough?, Vaccination? no., Epilepsy? yes – since 5 years of age.
" Hysteria?, Chorea? Smallpox? yes in 1897.
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

P. G. F. died at age of 84 years – prostatitis
P. G. M. " " " " 68 years – inflammation of bowels.
M. G. F. cause of death unknown
M. G. M. living

Reg. No., 1824, App. No., 1684, Admitted, November 14, 1910. , Born, February 14, 1893, Birthplace, San Francisco.
Name, Alene Higgins, Color, White, Sex, Female, Age, 17 years, 9 months, days, Residence, San Francisco, Co., San Francisco
Parentage: Father living, yes, Dead, , Occupation, hack driver, Nationality, Ireland, Age at birth of this child, 56 years,
" Mother " no, " yes, " housewife, " Ireland. , " " " 45 years. ,
Blood relationship of Parents, , Conjugal relation,
Relatives or Ancestors similarly afflicted,
" " otherwise afflicted,
" " intemperate, mother - died of alcoholism
Heriditary influences,
Labor, ordinary, Delivery, at 7 months
Third child of parents. Condition of other children, normal
Alleged Cause of Deficiency, congenital, Date of recognition, at 7 years of age.
Degree of deficiency at admission, imbecile, Abnormalities, high arched palate.

Physical condition: General development, slight - undersize (stoop shouldered.), Skin, O.K.
Hair, dark - O.K., Sight, O.K., Hearing,
Smell, , Taste, , Touch,
Heart action, etc., O.K., Pulse, 86 - O.K., Circulation,
Lung action, O.K., Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, coated, Teeth, badly decayed.
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, understands a command - recognizes colors - can do simple errands.
Locomotion, normal - , Speech, perfect - , Temperament, nervous.
Diseases: Measles? yes, Scarlatina? yes, Whooping Cough? yes, Vaccination? yes - 5 years ago., Epilepsy?
" Hysteria? , Chorea? Diptheria? Yes.
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Grand parents died of old age. - nothing is known further of her family history.
Mother died at age of 63 years - of alcoholism.

Reg. No., 1827 , App. No., 1621 , Admitted, November 18, 1910 , Born, July 29, 1845 , Birthplace, Boston- Mass.
Name, Emma Hatch , Color, white , Sex, female , Age, 65 years, 3 months, 20 days, Residence, Oakland , Co., Alameda ,
Parentage: Father living, no , Dead, yes , Occupation, merchant , Nationality, Maine , Age at birth of this child, 36 years ,
" Mother " no , " yes. , " housewife , " Maine , " " " 32 years. ,

Labor, normal, Delivery, full term.
First child of Parents. Condition of other children,
Alleged Cause of Deficiency, epilepsy —, Date of recognition, at 5 years of age.
Degree of deficiency at admission, epileptic — feebleminded possibly insane too., Abnormalities,
Physical condition: General development, slight — medium height, Skin, anaemic
Hair, dark, Sight, , Hearing,
Smell, , Taste, , Touch,
Heart action, etc., rapid, Pulse, , Circulation,
Lung action, OK, Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, coated, Teeth, some decayed.
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, can write her name — count to 20 — reads a few words —
Locomotion, normal — seems weak —, Speech, perfect — slow., Temperament,
Diseases: Measles? yes, Scarlatina?, Whooping Cough?, Vaccination? 7 years ago., Epilepsy? since 5 years of age.
" Hysteria?, Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Nothing is known of paternal family history
M. G. F. — cause of death unknown.
M. G. M. — died at age of 42 years — tumor of stomach.

On the night of her admission she had eight seizures — and on the following day she had 21 in all: retaining consciousness in the interval. She was sent to the hospital on morning of the 24th and continued to have seizures every 3-5 minutes — & up to 5 P.M. had 82: hypnotics & sedatives were tried but no effect was produced.

DIED December 25, 1910. Remains shipped to Sacramento — ~~at~~ the request of parents.

Millie Goldstein's history

and dura mater over entire cerebral cortex. About 4 ounces of cerebral fluid between the meninges — fresh lymph extending along right Sylvian fissure — more organized on the right than on the left fissure — & extending posteriorly toward occipital lobes; some lymph along sulci on either side of longitudinal fissure: Brain tissue soft: on sectioning punctuates vascularity very marked — oozing of blood pronounced on right hemisphere from these vessels. Both lateral ventricles O.K. — contain no fluid: choroid plexuses O.K. Cerebellar tissue soft: the proportion between white & gray matter normal: was unable to section cord evenly as it was very friable — pale in color: adhesions between the meninges there also: Section of cortex — & medulla to be examined microscopically. Thorax: 4 fresh pleuritic adhesions on rt. side:
Lung tissue O.K.: — hypostatic congestion of both lungs in dependent portions: anterior bronchial glands enlarged: Heart: — aorta (lining) slightly paler than usual: tricuspid & pulmonic & aortic valves O.K.: mitral showed thickening along edges of flaps — no organized clots in chambers of heart.
Abdomen: — liver. — smaller than normal: slight fatty degeneration — section taken & to be examined later microscopically.

Diagnosis — pachymeningitis (syphilitic): contributory — hereditary syphilis.
Remains buried in Home Cemetery June 3, 1912. — at request of her father.

Reg. No., 1838 , App. No., 1675 , Admitted, December 26, 1910 , Born, April 9, 1895 , Birthplace, Butte, Montana .

Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, can read primary books - count, cipher & write a little.
Locomotion, normal , Speech, yes - some hesitancy - , Temperament, nervous - hysterical at times - easily frightened - timid.
Diseases: Measles? yes , Scarlatina? yes , Whooping Cough? yes , Vaccination? yes. , Epilepsy?
" Hysteria? , Chorea? Diptheria? Yes.
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

P. G. F. died at age of 53 years - of pneumonia.
P. G. M. " " " " 72 years - of old age.
Nothing is known of maternal grand parents.

A positive (++) Wassermann test was obtained November 15, 1911.
On March 31, 1912 under ether anaesthesia she was given "Salvarsan" 606 - intravenously - the injection being made into the median cephalic vein of the right arm. Aside from nausea - she did not show any untoward effects for the first 24 to 48 hours. She was kept under observation for a period of 14 days - in the hospital - and no marked change was perceptible - physically - although she did not seem quite so nervous. On April 28, 1912 another Wassermann test was obtained with a (+++) reaction.

On the evening of May 30th - she retired without any unusual signs of ill health - but on arising on the morning of May 31st at 6 a.m. she said that she felt "faint & dizzy" & on going to the lavatory fell on the cement floor striking her head over the left orbital region, sustaining a short laceration. While she was being carried to her bed, she had a convulsion - involving her entire body & frothed at the mouth. She was unconscious & remained in a stupor for 1/4 to 1/2 hour after the attack. When she awoke complaining of a severe head-ache & nausea - vomiting setting in. She "beat" her head with her hands & moaned with pain. She was given a tablespoonful of Epsom salts which she did not retain - & was in a state of nausea - but somewhat quieter when seen at 7:20 A.M. She was then given a normal salt enema containing a ℥ of milk of asafoetida - with good results: later she was given a ℥ of Peacocks Bromides & seemed somewhat relieved until about 2:30 P.M. She was rational & spoke intelligently up to that time. Projectile vomiting set in - followed by extreme restlessness & partial unconsciousness. At 2 P.M. it was observed that there was paralysis of rt. side of the face & left arm - exaggerated knee reflexes - sluggish pupillary reaction - marked tremor of the tongue. She was given castor oil ℥i & straightway began to vomit bile stained fluid. Her restlessness became more marked & she was taken to the hospital & given a rectal injection of Sol. Dormiol 50% ʒi to ℥iv which produced a sedative effect. At 11:30 P.M. - convulsions set in which continued at 1-2-5 minute intervals up to 3:15 A.M. - when a second dose of dormiol had been given - also hyoscine hydrobromide - gr $\frac{1}{100}$: She was given Sps. Camphor minims x for weak pulse - which was very rapid. During these convulsions she was in a state of opisthotonos - the waistline being raised 3½ inches from the bed. After the convulsions had ceased - a slight paralysis was also observed in the rt. arm - & a constant twitching of the lips - with a strabismus of both eyes towards the left (internal of the rt. - external of the left) - which was marked during each convulsion. She continued in this semiconscious state until 3 P.M. June 1st - when convulsions set in again at same rate & frequency - involving the upper part of her body only - These attacks ceased after 6 P.M. as another dose of Dormiol was given - but began again after 10 P.M. - when she became totally unconscious - absolutely unable to swallow food or medicines. She passed away while in a quiet state at 2:05 A.M. June 2nd. A lumbar puncture was performed on the morning of June 1st - & about 12cc of clear fluid was obtained: on examination no bacteria were found: & a cyto-diagnosis revealed 98% lymphocytes. Part of the fluid was injected into the testicle of a guinea pig - which is to be watched: while a portion of the fluid will be subjected to a Noguchi test. A white blood count was made at the same time - showing a count of 21,200: Polymorphonuclears 82% Large Mononuclears 12% Small Mononuclears 6%.

DIED June 2, 1912. Pachymeningitis - (Syphilitic) (Cont. Hereditary Syphilis)

Postmortem held 11 hours after death: Body well nourished: rigor mortis partially set in: contusion & small laceration over left orbital region: hypostatic congestion set in - in neck - back - trunk - buttocks - lower extremities (dependent parts.)

Cranium:- on opening cranial cavity firm adhesion of dura mater over occiput to skull: & marked thickening of dura mater over entire brain - especially over occipital region. Fresh adhesions between pia

GENERAL HISTORY AND REMARKS:

Father died at age of 54 years - cause heart trouble.
P.G.F. " " " " 77 years - " old age.
P.G.M. " " " " 76 years - " " "
M.G.F. " " " " 70 years - " bowel trouble
M.G.M. " " " " 80 years - " old age.

March 4, 1911. She has been taking a prescription containing strychnine sulphate gr 1/100; chloretone gr iii–vi & sugar of milk one - often twice a day for a "pain in her stomach" - before breakfast & at bedtime - for past 7 to 8 years. Her relatives state that she has had no seizures in that time - but since her admission she has had two minor seizures - manifested by a twitching or nervous movements of hands & a momentary loss of consciousness - but she does not fall. The first two weeks after her admission she did not sleep well - wandered about the halls & attempted to get into the beds of other children. She is given occasionally a soda mint tablet at bedtime & so does not complain of pain.

She was taken out on parole November 16, 1911 at the request of her brother

DISCHARGED April 8, 1912 - at request of brother on parole since Nov. 16-1911. Improved.

Reg. No., 1851 App. No., 1726 , Admitted, February 8, 1911 , Born, May 23, 1891 , Birthplace, Dublin - Texas
Name, (Mrs) Viola Richards , Color, White , Sex, female , Age, 19 years, 8 months, 16 days, Residence, Sacramento , Co., Sacramento ,
Parentage: Father living, no , Dead, yes , Occupation, carpenter , Nationality, Alabama , Age at birth of this child, 36 years ,
" Mother " yes , " , " housewife " " Alabama , " " " 25 years ,
Blood relationship of Parents, none , Conjugal relation,
Relatives or Ancestors similarly afflicted,
" " otherwise afflicted,
" " intemperate,
Heriditary influences,
Labor, instrumental , Delivery, full term
child of Parents. Condition of other children, normal
Alleged Cause of Deficiency, congenital (?) - hard work on part of mother during pregnancy. , Date of recognition, at 5 years of age.
Degree of deficiency at admission, , Abnormalities,

Physical condition: General development, fair - , Skin, some acne of face.
Hair, black - O.K. , Sight, , Hearing,
Smell, , Taste, , Touch,
Heart action, etc., good , Pulse, good. , Circulation,
Lung action, good. , Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, , Teeth, fair
Menstruation: Regular? Irregular? - Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, can read - write & replies a little - can sew & do general housework
Locomotion, normal , Speech, perfect , Temperament, phlegmatic - morbid.
Diseases: Measles? yes , Scarlatina? , Whooping Cough? , Vaccination? yes - 6 years ago. , Epilepsy? yes - since 1 year of age.
" Hysteria? , Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Father died of kidney trouble - at age of 45 years.
Family history otherwise unknown

DISCHARGED May 3, 1911 at request of mother (Unimproved)

Reg. No., 1852, App. No., 1708, Admitted, February 11, 1911, Born, April 19, 1897, Birthplace, Sonoma County

Name, Emeline Jane Clark, Color, white, Sex, female, Age, 13 years, 9 months 23 days, Residence, Annapolis, Co., Sonoma

Parentage: Father living, yes, Dead, , Occupation, laborer, Nationality, Ireland, Age at birth of this child, 61 years,

" Mother " yes, " , " housewife, " Ireland, " " " 47 years.

Blood relationship of Parents, , Conjugal relation,

Relatives or Ancestors similarly afflicted,

" " otherwise afflicted,

" " intemperate,

Heriditary influences,

Labor, ordinary, Delivery, full term

Second child of Parents. Condition of other children,

Alleged Cause of Deficiency, fall - striking on head at 2½ years of age., Date of recognition, at 2½ years of age.

Degree of deficiency at admission, , Abnormalities,

Physical condition: General development, slight - tall for her age., Skin, clear -

Hair, thin - brown., Sight, , Hearing,

Smell, , Taste, , Touch,

Heart action, etc., good - but rapid., Pulse, rapid at times, Circulation, poor - of hands, feet & nose

Lung action, fair - subject to asthma, Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.

Tongue, , Teeth, in very bad condition

Menstruation: Regular? , Irregular? , Scanty?

" Painful? , Peculiarities of, , First menstruated at what age?

" Nervous and Mental Phenomena of,

Educational attainments at admission, can count to 100: copy a few words & can read in 2nd reader.

Locomotion, usually "stamps" her feet, Speech, does not pronounce words plainly., Temperament,

Diseases: Measles? , Scarlatina? , Whooping Cough? , Vaccination? no., Epilepsy?

" Hysteria? , Chorea? Bronchitis? subject to it

Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS: Wassermann 11-20-'15. Negative.

Nothing is known of family history.

In September 1911 - under somnoform anaesthesia she had her adenoids removed - later a number of teeth were extracted -

On October 28, 1911 - she was taken with an attack of lobar pneumonia (of rt. lung): crisis occurred on the morning of 7th day - temperature dropping to normal - She had an uneventful recovery - and was dismissed from hospital on December 8, 1911.

She had an attack of asthma on August 15, 1911 - the first since an extensive extraction was performed on her teeth (17 in all) - on July 6th: After a general catharsis was given & digestion corrected - the attacks subsided and she has had none since - (December 1911).

On March 21 - 1912 - she had an attack of broncho pneumonia - improving slowly - but on April 13, 1912 had an attack of German measles - complicated with bronchitis - quite severe in character. She made a slow recovery and was discharged May 10, 1912.

Transferred to Tb Hospital, Mar 5, 1914

Locomotion, slow on account of stiff knee, Speech, ~~perfect~~ - hesitating at times, Temperament,
Diseases: Measles? yes, Scarlatina? , Whooping Cough? yes., Vaccination? no, Epilepsy?
" Hysteria? , Chorea? Small pox -? yes.
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

P. G. F. died at age of 76: cause - old age.
P. G. M. " " " 65: " (insanity)
M. G. F. died of old age - cause unknown.
M. G. M. " " " " :- " "

On June 23, 1912 - Edna gave a history of a cough - nausea - vomiting - & pain in right side of her chest. She was sent to the hospital & that evening showed evidence of a beginning broncho pneumonia involving the middle lobe of her right lung. On June 25, 1912 she was given an intramuscular injection of 10 cc. of pneumonic serum (prepared by Dr. Hirschfelder of San Francisco from a stock culture. Her white blood count that day was 16,400. Polymorphonuclears 82%. Small Mononuclears 10%. Large Mononuclears 7.2% Eosinophiles 0.8%. On June 28th - she was given 14 cc. of the serum just below the left scapular region. - but this injection did not seem to influence her temperature or blood count: for the W.B.C. was 17,600: Poly. 82% S. Mono. 12% L. M. 6%. Her temperature rose to 104° F. on the 5th day and then began to drop gradually until on the morning of the 8th day it was normal. A small portion of the lower lobe of the left lung also became involved before the 5th day - but both lungs began to resolve after the 9th day. On the 16th day she was permitted to sit up in a chair & now on the 20th day, except for a very slight cough which occasions a little pain on the right side - she is steadily convalescing. In addition to the serum treatment - she was given stimulants - strychnine - nitroglycerine - & tinct. digitalis as indicated - hyperpyretics i.e. quinine sulphate - mustard packs: diuretics & urinary antiseptics such as urotropin (hexamethylenetamine) - potass. acetate: external applications of cold over precordia to reduce heart action: & tympanites being controlled with turpentine stupes & enemata of normal salt solution & milk of asafetida. She made an uneventful recovery after her temperature dropped to normal.

On Oct. 17, 1913. Edna Kidd was admitted to hospital to be prepared for operation.
" 19 " " " operated upon by Dr B. F. Alden of San Francisco. Assisted by Dr Wm Dawson (Dr Wm J. G. Dawson's son). Dr G. L. Boolt anesthetizer, was present, but Dr Alden gave spinal anesthesia.
Operation was for "chronic appendicitis." When abdomen was opened there were a few adhesions attached to the caecum and appendix; they were from omentum. Appendix was removed and feces extended the full length of appendix. There was no inflammation of the appendix. Ascending colon was full of fecal matter. Uneventful recovery.

Discharged Nov. 6th from Hospital

Discharged Oct. 30, 1920.

Reg. No., 1864, App. No., 1718, Admitted, March 22, 1911., Born, June 18, 1900, Birthplace, Washington

GENERAL HISTORY AND REMARKS:

P.G.F. committed suicide - at old age.
P.G.M. natural causes - at old age.
M.G.F. died between ages of 40 & 50 years - cause:- tuberculosis
M.G.M. died at age of 49 years - cause, cancer.

She was sent to the hospital on the day following her admission for treatment of oedema of both feet and legs. Urinalysis was made with fol. report:- sp. gravity 1020: trace of albumin: some hyaline casts: and white blood corpuscles: many red blood corpuscles - & some epithelial cells. She was put on digitalis - blue mass - later to pow. jalap co. & Basham's Mixture. Her improvement was steady and on April 26th she was discharged - the oedema having disappeared almost entirely. At times the swelling reappears to some extent - but not sufficient to cause her any inconvenience or pain.
December 1911 - She has had no oedema of her lower extremities for some time - health good. - except for seizures which at times render her dull & apathetic for days.

Dec. 12 - '12. Urine analysis showed albumen and large and small granular casts. Cleared up after several weeks treatment.

~~Feb.~~ 16 - 13. ~~Had~~ series of spasms which gradually grew more frequent till death relieved her.

DIED ? Feb. 17 - 1913. Status Epilepticus, [illegible] Epilepsy. Shipped to Los Angeles

Reg. No., 1874, App. No., 1692, Admitted, April 19 1911, Born, unknown, Birthplace, Texas (?) probably Mexico.
Name, Lila Gomez, Color, white, Sex, female, Age, 35 years, ? months, days, Residence, Los Angeles., Co., Los Angeles.,
Parentage: Father living, ?, Dead, , Occupation, , Nationality, , Age at birth of this child, ,
" Mother " ?, " , " , " , " " " ,
Blood relationship of Parents, , Conjugal relation,
Relatives or Ancestors similarly afflicted, Her two children (a boy & girl – "Chavez") – are inmates of The Home.
" " otherwise afflicted,
" " intemperate,
Heriditary influences, unknown –
Labor, unknown., Delivery,
child of Parents. Condition of other children,
Alleged Cause of Deficiency, , Date of recognition, unknown
Degree of deficiency at admission, , Abnormalities,

Physical condition: General development, , Skin, dark in color – but clear
Hair, black – O.K., Sight, , Hearing,
Smell, , Taste, , Touch,
Heart action, etc., OK, Pulse, , Circulation,
Lung action, OK, Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, slightly coated., Teeth, fair
Menstruation: Regular? not now as she is nursing a five months old infant. Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, can care for herself & child – has had no education – power of memory poor.
Locomotion, normal., Speech, stutters to some extent., Temperament,
Diseases: Measles? yes, Scarlatina?, Whooping Cough?, Vaccination? yes., Epilepsy?
" Hysteria?, Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Nothing is known of family history –

On her admission she had been nursing her child – and breasts were "caked": She was sent to the hospital for treatment – & under Belladonna Oint. applications – massage: & applications of warm castor oil – her breasts were successfully treated.

DIED November 26" 1915 at 8.00 p. m. Diagnosis Acute Dilatation of Stomach. Syphilis. Tuberculosis of Lungs. Autopsy Surgeons. Drs. Emmelrogt & Butler.

Autopsy held November 27 1915. 19 hrs. after death. Body greatly emaciated. Decubitus size of a dime over left Trochanter Major. Beginning Post-Mortem changes in abdomen skin of which is green. No rigor mortis present. Contractures of both lower extremities & hands. Anchylosis of left hip joint. Panniculus adiposus nil. Abdominal & chest muscles dark, badly developed & dry. Skin over entire body dry. Cartilages of ribs unossified. Head. Large, ~~amount of~~ fair dark brown hair. Skull. About normal thickness except over vertex there are areas (4 small) size of dime which are translucent & show evidence of thinning of diploe - the outer & inner layer being present. - Brain. 28 ozs. - Right Cerebral & cerebellum hemisphere smaller than left. Perivascular clouding throughout - pia arachnoid. Rt. occipital lobe. Convolutions very shallow. Gray matter deficient. Ventricular fld. slightly increased. Brain injected slightly throughout. Left ventricle increased at expense of white matter. Brain soft throughout. Thymus not present.

Heart. 2 ozs. Aortic valves ~~congested~~. Tricuspid O.K. - Mitral & Pulmonary O.K. Aortic slightly congested. Cardiac muscle O.K. Pleural Cavities. Recent adhesions at left apex ant. & post. right apex posteriorly also.
Rt. Lung. 10 ozs. Small tubercle (millet seed) at apex also congested here. Congested throughout.
Lt. Lung. 8 ozs. Cavities at apex & extends down into upper lobe for whole extent. Small cavities in centre of lower. Congested throughout -

Stomach greatly distended. Is 3 fingers breadth below umbilicus & 4 ab. pubes. Stomach hole looking: width is equivalent to that of abdominal cavity. Mesentery glands enlarged - Caecum in pelvis & enlarged. Small intestines in pelvis & of small calibre. Stomach contains about one qt. of dark grumous material (liquid). Pylorus & Cardia injected - Pylorus thickened also & large. Spleen. weight - 1½ zs. Post mortem degeneration on surface. Parenchyma O.K. Uterus. infantile. Ovaries present - but small & flattened out. Bladder empty & normal - Suprarenal - left congested -
Rt. Kidney - weighs 1½ zs. Anaemic throughout. Capsule strips easily.
Lt. Kidney - weighs 1½ zs.
Liver weighs 1 lb. Congested throughout - necrotic areas in Parenchyma - Caps. slightly adherent.
Gall Bladder. One soft stone in bladder & one in cystic duct. Serous fluid c̄ mucus in bladder.
Pancreas. weight 2 zs - normal -

" Hysteria?, Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS;

Nothing is known of ancestral history.

On August 10th – this child was observed to have a cough and on the following day she was sent to our hospital. She was found to have a temperature of 101^{3} – pulse 104 – respiration 28 per minute. Her cough was croupy-like in character; & on examination of her chest sibilant râles were heard over the bronchi but no dulness could be detected. Later – in the course of two days subcrepitant râles were present all over the lungs. On the day before her death – an area revealing bronchial breathing was found in the left axilla – but no dulness was evident. The case progressed for eight days – and during this time the expectoration was of a yellowish purulent character: her temperature ranging from 99^{7} to 101^{8}. But before her death it ran up to 104^{5}. She was in a state of collapse on the morning of August 18th having a cyanotic appearance with marked dyspnoea. She became gradually more dyspnoeic and weaker & passing away in a semiconscious state at 4:55 P.M. on August 19th.

DIED August 19th – 1911. Cause of death: – broncho-pneumonia – contributory acute bronchitis
Remains buried in Home Cemetery on August 21, 1911.

Autopsy held 12 hours after death. Body fairly nourished. Rigor mortis setting in. Hypostatic congestion strongly marked on back: less so at epigastrium. On opening the thorax some congestion of middle lobe of right lung and at summit of lower lobe of left lung with muco-pus in bronchioles. Mucopus (inspissated) filling lumen of trachea. Smears taken of mucopus from trachea and larynx revealed diplococci (Fraenkel's pneumococci). Fibrinous layer in large bronchi. Fresh blood clots in ventricles – small one on right side. Heart small & flabby: auriculo-ventricular valves slightly hyperaemic: no vegetation present on valves. Other organs in healthy condition.

Reg. No., 1892. , App. No., 1696 , Admitted, June 2, 1911. , Born, August 22, 1886. , Birthplace, Watsonville.

" Hysteria?, Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:
Father died at age of 36 years - result of an accident.
Nothing is known of family history otherwise
March 1913. Lilie began having epileptic spasms. Was the first patient to receive Crotolin (Snakevenom) Given by Dr M. A. Genung and Dr G. L. Boalt. gr. 1/250 was first dose.
Dec. 14, 1913. Lillie was operated upon by Dr B. F. Alden.
Double salpingectomy. Left ovary removed. (cystic) Portion of left ovary removed.
Ventral fixation. Appendectomy.

DISCHARGED Transferred to Stockton State Hospital July 19, 1918

Reg. No., 1917, App. No., 1803, Admitted, September 15, 1911, Born, October 28, 1897, Birthplace, Italy
Name, Lillie Gieto, Color, white, Sex, female, Age, 13 years, 10 months, 18 days, Residence, Los Angeles, Co., Los Angeles,
Parentage: Father living, yes, Dead, , Occupation, street laborer, Nationality, Italy, Age at birth of this child, 26 years,
" Mother " yes, " , " housework, " Italy, " " " 24 years,
Blood relationship of Parents, , Conjugal relation,
Relatives or Ancestors similarly afflicted, parents are not bright: low grade of intelligence: oldest brother an inmate of the Home.
" " otherwise afflicted, brother is an epileptic.
" " intemperate,
Heriditary influences, not good.
Labor, unknown, Delivery, don't know
Second child of Parents. Condition of other children, low grade of intelligence
Alleged Cause of Deficiency, congenital, Date of recognition, always observed.
Degree of deficiency at admission, , Abnormalities,

Physical condition: General development, short - heavy - set., Skin, swarthy - not clear -
Hair, dark - full of pediculi:, Sight, not strong - had trachoma last year., Hearing, O.K.
Smell, , Taste, , Touch, O.K.
Heart action, etc., O.K. - rapid., Pulse, 96 - O.K., Circulation,
Lung action, O.K., Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, slightly coated, Teeth, fair.- some decayed.
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, can read in 3rd reader - can count & add a little - power of memory fair:
Locomotion, normal, Speech, slow - perfect, Temperament,
Diseases: Measles? - ?, Scarlatina?, Whooping Cough?, Vaccination? yes., Epilepsy?
" Hysteria?, Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

All grand parents are living.

Operated 1/21/19 by; Dr. F. O. Butler - Dr. M. E. Thom. Anaes. - Dr. Wm. L. Whittington.
Double partial Salpingectomy for sterilization
Appendectomy.

Discharged Oct. 5, 1920.

Reg. No., 1918 App. No., 1514, Admitted, September 20, 1911. , Born, November 28, 1890, Birthplace, Sacramento
Name, Della Scribner, Color, white, Sex, female, Age, 20 years, 9 months, 23 days, Residence, Freeport, Co., Sacramento,
Parentage: Father living, yes, Dead, , Occupation, farmer, Nationality, Missouri, Age at birth of this child, 34 years,
" Mother " yes, " , " housework. , " Holland, " " " 25 years,
Blood relationship of Parents, , Conjugal relation,
Relatives or Ancestors similarly afflicted, none
" " otherwise afflicted, mother subject to neuralgia.
" " intemperate,
Heriditary influences, good.
Labor, ordinary, Delivery, full term
first child of parents. Condition of other children,
Alleged Cause of Deficiency, result of teething (?): 1st tooth at 11 mos. 1st walked at 14 mos. , Date of recognition, at 5 years of age.
Degree of deficiency at admission, , Abnormalities,

Physical condition: General development, good - very stout - , Skin, covered with contusions at time of admission).
Hair, dark - thin, Sight, O.K. , Hearing, O.K.
Smell, , Taste, , Touch,
Heart action, etc., good, Pulse, , Circulation,
Lung action, good, Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, coated, Teeth,
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, talks like a child of 1-2 years: attempts to bite - scratch others without provocation - pulls out her own hair at times - difficult to manage - except by warning
Locomotion, slow - takes large steps, Speech, not perfect - , Temperament,
Diseases: Measles? , Scarlatina? , Whooping Cough? , Vaccination? , Epilepsy?
" Hysteria? , Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

P. G. F. dead - cause & age unknown.
P. G. M. died at age of 68 years - cause - was dropsy
M. G. F. & M. - dead - cause & age unknown.

On admission - this patients body - arms - back & legs were covered with contusions - no doubt recently received. She became unmanageable on the day following - attempted to run away: scratched & tried to bite the attendants & inmates who attempted to hold her. She does not speak rationally - merely a jargon of words - impressed only by certain words when she is spoken to by others. If she is disturbed when in this irrational state of mind - she will pull her hair out by the handfuls - & will bite her hands. She must be kept in isolation - or if among the inmates - it is necessary at times to restrain her.

Reg. No., 1919. , App. No., 1809. , Admitted, September 21, 1911. , Born, December 10, 1906. , Birthplace, Hanford.

Diseases: Measles? , Scarlatina? , Whooping Cough? , Vaccination? no , Epilepsy? yes - began a month ago.
" Hysteria? , Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Family history immaterial - all living.

This child was given special attention in regard to diet - & medically - was given cod liver oil - Syr. Hypophosphites - internally: also given olive oil rubs - all of which improved her physical condition to some extent: so much that just before her last illness - she was able to sit up in a chair - & push a rocker with her feet - as well as hold up her head a little better than on her admission. On April 23, it was observed that she was quite fretful - refused her food: & her stools were somewhat loose. She was sent to the hospital - & given symptomatic treatment for gastritis & intestinal toxemia - as her stools soon began to show that condition. The following day - examination of her chest revealed bronchial congestion & that evening - a diagnosis of broncho-pneumonia of the rt. lung - which began to involve the left lung the next day. Two days later she seemed to show some improvement but this was only temporary - as her temperature began to rise again. She gave evidence of cerebral irritation in a piercing cry - restlessness - & turning of head continually - a slight Kernig's sign - tache cerebrale - & extreme twitching of left facial & arm muscles -. Her temperature rose to 105.4 and she became weaker. Both lungs showed involvement - & heart was very weak. She passed away after losing unconsciousness - at
DIED 8:25 P.M. May 1, 1912.

Diagnosis:- Broncho pneumonia - secondary - meningitis (tubercular).

Her remains were shipped to Hanford, for May 2nd - at the request of her parents.

GENERAL HISTORY AND REMARKS:

P.G.F. died at age of 65 years:- cause of death:- typhoid fever
P.G.M. " " " " 87 years:- " " " - old age.
M.G.F. " " " " 58 years:- " " " - typhoid fever.
M.G.M. " " " " 45 years:- " " " - menopause (?).

Patient has given birth to seven children in period of nine years.

This patient was feeble during most of her stay at this Home. She developed a bronchopneumonia at the end of 1913, and was sent to the hospital, Jan'y 1, 1914. Here she passed through a lingering illness in which she developed abscess of the lung, doubtless due to tuberculosis. She died finally May 19, 1914.

Post-mortem hours after death. Rigor mortis had passed off. Body was considerably emaciated. A greenish discoloration is evident over the abdomen.

Thorax. There are adhesions over an abscess-cavity in the right lung. This lung weighs 31 oz.; the left, 15½ oz. There are several abscesses in the middle and upper lobes of the right lung; with some tubercles and bronchopneumonia. The bronchial and mesenteric glands are both enlarged. Aorta, normal. Old vegetations are present on the mitral and tricuspid valves. There is one also on each leaf of the semilunar valves.

Abdomen. Stomach, normal. Appendix, normal. Spleen, good size, 5 oz. The liver weighs 2 lbs. 14 oz. Its specific consistency is soft; otherwise it is normal. Right kidney, normal: left kidney has a very congested cortex. The ovaries are slightly contracted. The uterus hypertrophied.

DIED May 19, 1914 of Pulmonary tuberculosis and abscesses of the lung.

Reg. No., 1926, App. No., 1775, Admitted, October 3, 1911., Born, April 16, 1898, Birthplace, Oakland

GENERAL HISTORY AND REMARKS:

P. G. F. died at age of 45 years - cause unknown.
P. G. M. died at age of 36 years - " "
M. G. F. " " " " 58 years - "
M. G. M. " " " " 55 years - apoplexy
DISCHARGED Discharged. December 14th 1912 - Impd. Request of Parents.

Re- ADMITTED March. 4th 1915. Had been placed in Alameda Training School - where she set fire to her dress & then locked herself in lavatory - Legs both burned & back to waist down - There are two granulating surfaces on posterior aspect of left leg - extending from apex of Popliteal space upwards for 4 inches & about 3 in. across - On rt. leg posterior a granulating surface almost triangular in shape & nearer internal ~~surface~~ of leg - Was in a Hospital for treatment for burns over a year -
Has defective eyesight - Rt. E. turns towards nose: L. E. to temporal side -
Pupil of R. E. normal size - Pupil L. E. dilated -
Has a tendency to keep them closed - apparently not due to photophobia - no lachrymation.
Pupils do not react to light - Well built & fairly well nourished girl -
Chest well shaped - Lungs apparently normal - Pulse 88 -
Chest measures 29½ in. - On inspiration 30½ in - Expansion 1½ in (?) -
Counts beyond ninety - altho making mistakes occasionally which may be due to defective sight -
Can not do subtraction or multiplication -
Plays the Piano fairly well -
Reflexes - Patellar abolished - altho Ham strings are contracted which may account for absence -
Right foot held extended & stiff -
Has very bad teeth - some extracted by Dr McMahon -
No evidence of discharge from ear -
Wassermann - negative.

Reg. No., 1984, App. No., , Admitted, November 14, 1911, Born, December 9, 1863, Birthplace, Switzerland.
Name, Rosie Grieder, Color, white, Sex, female, Age, 47 years, 11 months, 5 days, Residence, San Francisco, Co., San Francisco
Parentage: Father living, no, Dead, yes, Occupation, business man, Nationality, Switzerland, Age at birth of this child, 36 years,
" Mother " no, " yes. , " housework. , " Switzerland. , " " " 27 years.,

Educational attainments at admission, understands a command, - can wash dishes & set the table.
Locomotion, , Speech, hesitancy., Temperament,
Diseases: Measles? yes, Scarlatina?, Whooping Cough? yes., Vaccination? yes - 20 years ago, Epilepsy? yes.
" Hysteria? , Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Nothing is known of family history - other than that of father who died of pneumonia.

On February 27, 1912 - she was taken to the hospital on account of debility following a series of five seizures, during the past 12 hours. She was in the state of status within a few hours after entering the hospital - & except for an interval of 4 hours & had 12-15 seizures that day. She developed lobar pneumonia and on account of her poor heart condition did not show any signs of improvement - passing away on March 1, 1912

Diagnosis - lobar pneumonia - contributory status epilepticus
Her remains were buried in our Home Cemetery - March 3, 1912.

Reg. No., 1949. , App. No., 1551. , Admitted, December 15, 1911. , Born, October 19, 1877 , Birthplace, Angels, Calaveras Co.
Name, Lottie Rebecca Stephens (Mrs) , Color, white , Sex, female , Age, 34 years, 1 months, 26 days, Residence, San Francisco , Co., San Francisco,
Parentage: Father living, no , Dead, yes , Occupation, farmer , Nationality, Arkansas , Age at birth of this child, 22 years ,
" Mother " yes , " , " housewife , " California. , " " " 19 years ,
Blood relationship of Parents, , Conjugal relation,
Relatives or Ancestors similarly afflicted, a cousin is feeble minded. — grandmother also feebleminded (?) a year before death.
" " otherwise afflicted, grandmother was paralyzed — Mother is insane — now at Stockton State Hospital.
" " intemperate,
Heriditary influences,
Labor, Difficult , Delivery, full term
First child of Parents. Condition of other children, normal.
Alleged Cause of Deficiency, anxiety & nervous — strain on part of mother. , Date of recognition, at 16 yrs. after paralysis of left side occurred.
Degree of deficiency at admission, , Abnormalities,

Physical condition: General development, thin — poorly nourished. , Skin, sallow —
Hair, black — , Sight, none in rt. eye. , Hearing,
Smell, , Taste, , Touch,
Heart action, etc., O.K , Pulse, , Circulation,
Lung action, O.K. , Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, slightly coated. , Teeth,
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, not menstruating now — as she is nursing a month's old infant. First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, can read & write fairly well — count to 100 — & can add & subtract a little — poor of memory poor
Locomotion, drags rt. foot. , Speech, not perfect. , Temperament,
Diseases: Measles? yes , Scarlatina? , Whooping Cough? yes , Vaccination? no. , Epilepsy?
" Hysteria? , Chorea? yes at 17 yrs. of age —
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS;

Father died at age of 34 years — fell from electric pole — fractured neck.
P. G. F. died at age of 63 yrs. — cause — dropsy.
P. G. M. " " " " 70 yrs. — cause — senility
M. G. F. " " " " 68 yrs — cause — dropsy.
M. G. M. " " " " 37 yrs — cause — pleuropneumonia.

This patient came in — having just nursed a month & half old infant — & was sent to our hospital to receive treatment of her mammary glands. Result of treatment good.

Locomotion, cannot walk - without assistance, Speech, cannot talk., Temperament,

Diseases: Measles?, Scarlatina?, Whooping Cough?, Vaccination?, Epilepsy?

" Hysteria?, Chorea?

Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

P.G.F. dead - cause of death unknown
P.G.M.- living
M.G.F. died at age of 74 years - cause: heart disease (?).
M.G.M. living - age 82 years.

This child has required special attention in regard to her food - bowels - & mouth condition - the latter giving evidence of malnutrition - pyorrhoea & some decaying teeth. She was put on cod liver oil + Syr. hypophosphites & Tinct. Ferri chloride. Just before her last illness - with the exception of an attack of indigestion (intestinal - soon after her admission) she seemed to improve physically & was able to walk with assistance. She was taken ill on April 26th - with vomiting & nausea - although her bowel condition seemed to be good. She was sent to our hospital on April 27th - & treated for gastritis - & appeared quite improved two days later. But on April 30th - she had green diarrhoea - containing mucus and undigested curds. Her abdominal recti were tense - & there appeared to be considerable pain on palpation over whole of abdomen - She had a slight cough - with little bronchial congestion. - but her bowel condition became increased & she became weaker every day. On the morning of May 4, - she was in state of collapse - but was revived with stimulants & counter-irritants & mustard packs (the latter given to reduce her fever). During the night from May 4 to 5th - she seemed to pass from a slightly improved condition to a hopeless state - & passed away at 1:17 P.M. May 5, 1912.

DIED

Diagnosis:- Tubercular peritonitis.

Her remains were shipped to Napa - May 6, 1912 - at the request of her parents.

GENERAL HISTORY AND REMARKS:

Patient entered the Home – Jan. 23, 1912 – brought from City & County Hospital in San Francisco by a stretcher. She was burned severely about 5 months ago – while in a seizure – falling into a boiler of hot water which she was removing from a stove. She does not know whether she fell by the stove – as she was alone at the time the accident occurred – & was found by her husband beside the boiler on the kitchen floor. She bears new scars on both forearms – one which extends up to middle third of left arm. There is an extensive burn 3rd degree of external surface of left thigh – & involving anterior surface of the knee & projecting up the inner surface of thigh & down the inner surface of the leg. Another burn – of about 9 inches in length & 2-2½ inches in width involves the middle third of the right thigh. Healing was evidently slow – but after a week's treatment given daily – considerable improvement has been observed. The burns are gently irrigated with a weak solution of lysol – & covered with narrow strips of gutta percha tissue arranged along edges of wounds & across wound in lattice-work fashion, over this network – a dressing of either zinc oxide ointment & olive resin – combined – or containing in addition ichthyol (1-2%) is applied: here & there the granulations are "touched up" with caustic lunar stick.

DIED Jan. 12-1913. Lobar Pneumonia (Shipped to San Francisco)

Reg. No., 1959., App. No., 1850, Admitted, January 29, 1912., Born, January 22, 1897, Birthplace, Ontario - Canada

Name, Edna McAuley, Color, White, Sex, female, Age, 15 years, months, 7 days, Residence, San Francisco, Co., San Francisco.

Parentage: Father living, no, Dead, yes, Occupation, laborer, Nationality, Canada, Age at birth of this child,

" Mother " no, " yes., " housewife, " Canada, " " ",

Blood relationship of Parents, , Conjugal relation,

Relatives or Ancestors similarly afflicted,

" " otherwise afflicted, mother died of tuberculosis - father - of heart disease

" " intemperate,

Heriditary influences,

Labor, , Delivery,

Sixth & last child of Parents. Condition of other children,

Alleged Cause of Deficiency, , Date of recognition, since infancy

Degree of deficiency at admission, , Abnormalities, Mongolian imbecile & has all the characteristics of that type.

Physical condition: General development, well - nourished - under sized., Skin, dry - otherwise O.K.

Hair, fair - thin., Sight, - OK - slight blepharitis., Hearing,

Smell, , Taste, , Touch,

Heart action, etc., O.K., Pulse, rapid -, Circulation,

Lung action, O.K., Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.

Tongue, slightly coated., Teeth, fair - some decaying

Menstruation: Regular? Irregular? Scanty?

" Painful? Peculiarities of, First menstruated at what age?

" Nervous and Mental Phenomena of,

Educational attainments at admission, attended a school for feebleminded children for 2 years - with poor results - can count to 20 - recognizes colors understands a command.

Locomotion, normal, Speech, imperfect., Temperament,

Diseases: Measles? yes, Scarlatina? Whooping Cough? yes., Vaccination? yes., Epilepsy?

" Hysteria? Chorea?

Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

P.G.F. died of old age.
P.G.M. " " " "
Nothing is known of maternal history; see parental history above.

Mar. 20 - 1915 Tonsillotomy. Dr Butler

Reg. No., 1960, App. No., 1867, Admitted, February 12, 1912, Born, November 20, 1892, Birthplace, Lompoc, Santa Barbara Co.
Name, Dora P. Clapp, Color, white, Sex, female, Age, 19 years, 2 months, 21 days, Residence, Lompoc, Co., Santa Barbara.
Parentage: Father living, Dead, yes, Occupation, farmer, Nationality, Utah, Age at birth of this child, 38 years,

Reg. No., 2019. , App. No., 1715 , Admitted, July 18, 1912. , Born, May 5, 1907. , Birthplace, Stockton.
Name, Hazel Eleanor Ringo. , Color, White , Sex, female , Age, 5 years, 2 months, 13 days, Residence, Lodi , Co., San Joaquin ,
Parentage: Father living, yes , Dead, , Occupation, cement worker. , Nationality, Oregon , Age at birth of this child, 27 years ,
" Mother " yes. , " , " housewife. , " Canada. , " " " 28 years ,
Blood relationship of Parents, , Conjugal relation,
Relatives or Ancestors similarly afflicted,
" " otherwise afflicted, grandmother (paternal) was insane.
" " intemperate,
Heriditary influences,
Labor, Ordinary. , Delivery, full term.
Fourth child of Parents. Condition of other children,
Alleged Cause of Deficiency, Mother had a threatened miscarriage (of this child) at 7th. month. - yet condition is undoubtedly due to convulsions when she lost power of speech & hearing. , Date of recognition, at 22 months.
Degree of deficiency at admission, , Abnormalities, bears scar of trephining performed over left motor area: & abdominal incision.
Physical condition: General development, slender - average height. , Skin,
Hair, brown - O.K. , Sight, , Hearing, apparently deaf.
Smell, , Taste, , Touch,
Heart action, etc., , Pulse, , Circulation,
Lung action, , Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, , Teeth,
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, plays with toys - seems to understand a simple command by gestures.
Locomotion, normal - inclined to drag feet. , Speech, cannot talk. , Temperament,
Diseases: Measles? yes: in 1909. , Scarlatina? , Whooping Cough? yes - recently. , Vaccination? no. , Epilepsy? yes.
" Hysteria? , Chorea? Brain fever:- yes(?) in 1909.
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

P. G. F. died at age of 60 years. cause:- heart disease.
P. G. M. living (?)
M. G. F. died at age of 70 years:- cause- pneumonia.
M. G. M. " " " " 45 years:- cause- childbirth.

Patient had 57 spasms in A. m. – & 117 spasms $2.^{15}$ p. m. to $11.^{40}$ p. m. –

DIED September 7-1915. at $11.^{40}$ p. m. Diagnosis - Status Epilepticus following Epilepsy -
Buried in Home Cemetery.

Mental Grade at Death. Idiot - Mute - Epileptic.

Autopsy held 14 hrs & 20 minutes after death. Drs Ermentrout & Moore. [illegible]

Gen. Appear: Female well developed, well nourished. Livoris of finger tips & dependent parts. Post mortem changes beginning in anterior abdominal wall. Old ileo-colotomy scar in epigastric region to left of median line. Skin scar in scalp over left parietal region c̄ long depression beneath, evidently due to former decompression operation. Rigor mortis marked.
Brain weight 39 ozs: Dura mater thickened throughout & adherent to decompression scars in left parietal bone. Pia adherent to Dura in this region. When skull cap was removed Dura & Pia over decompression scar came off c̄ it & the brain bulged out considerably. Pia quite wet & engorged.
Cortex injected throughout. Adhesions of temporal lobes. Pia to Dura along post. surface.
Medulla slightly injected & 4th Ventricle injected -
Thoracic Cavity. Rt. Lung weighs 8 ozs: On section, congested throughout (hypostatic & acute passive.
Left lung weighs 8 ozs. On section same as right.
Heart " 4 ozs; Aortic V. slightly congested; Mitral, calcified plaq. at leaflets; Tricuspid & Pulmonary slightly congested.
Liver weighs 20 ozs. On section Congested throughout.

Kidneys. Rt. Kidney - 2 ozs. On section, Capsule strips easily, Slightly congested.
Lt. " $2\frac{1}{2}$ ozs. " " " " " " "

Spleen, Weight 2 ozs. On section, greatly congested - Capsule strips easily -

Pancreas " 1 oz. Congested throughout on section.

Reg. No., 2020. , App. No., 1964. , Admitted, July 25, 1912. , Born, January 14, 1876. , Birthplace, Iowa Hill,
Name, (Mrs) Alice Etta Smith. , Color, White , Sex, female , Age, 36 years, 6 months, 11 days, Residence, Grass Valley. , Co., Nevada. ,
Parentage: Father living, no , Dead, yes , Occupation, miner , Nationality, England , Age at birth of this child, 36 years ,
" Mother " no , " yes. , " housewife. , " England. , " " " 30 years. ,
Blood relationship of Parents, , Conjugal relation,
Relatives or Ancestors similarly afflicted,
" " otherwise afflicted, maternal aunt insane - now at Napa State Hospital.
" " intemperate,
Heriditary influences,
Labor, unknown. , Delivery, unknown.
Fourth child of Parents. Condition of other children, normal
Alleged Cause of Deficiency, epilepsy - & infantile paralysis. , Date of recognition, unknown.
Degree of deficiency at admission, , Abnormalities, paralyzed at 4th month. - involving right side.

Physical condition: General development, slender- medium height. , Skin,
Hair, brown. , Sight, , Hearing,
Smell, , Taste, , Touch,
Heart action, etc., , Pulse, , Circulation,
Lung action, , Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, , Teeth, some decaying.
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, attended school up to 4th. grade.
Locomotion, normal. , Speech, perfect. , Temperament,
Diseases: Measles? yes. , Scarlatina? , Whooping Cough? yes. , Vaccination? unknown. , Epilepsy? yes.
" Hysteria? Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc, Insane:? pronounced so 7 years ago: was in Napa State Hospital from 1905-1908.

GENERAL HISTORY AND REMARKS:

Father died at age of 62 years: cause- paralysis.
Mother " " " 69 years:- " "
All grand-parents are dead- cause unknown.

Reg. No., 2021, App. No., 1928, Admitted, July 27, 1912, Born, July 24, 1902, Birthplace, San Francisco
Name, Hilda Madeline Filori, Color, white, Sex, female, Age, 10 years, months, 3 days, Residence, San Francisco, Co., San Francisco.
Parentage: Father living, yes, Dead, , Occupation, factory hand in brushes - etc., Nationality, France (Corsica), Age at birth of this child, 40 years,
" Mother " yes, " , " nurse, " Jamaica, " " " 27 years,

Relatives or Ancestors similarly afflicted,
" " otherwise afflicted,
" " intemperate,
Heridiatary influences,
Labor, Difficult, Delivery, at 7 months - instrumental.
First child of Parents. Condition of other children, normal.
Alleged Cause of Deficiency, Injured at birth, Date of recognition, at 1 year.
Degree of deficiency at admission, , Abnormalities, left leg paralyzed.

Physical condition: General development, undersized, Skin, O.K.
Hair, black O.K., Sight, O.K., Hearing, O.K.
Smell, , Taste, , Touch,
Heart action, etc., , Pulse, , Circulation,
Lung action, , Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, , Teeth, decaying.
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, can count to 20. understands a little of the English language - understands a simple command. - memory good.
Locomotion, cannot walk - paralyzed, Speech, somewhat imperfect -, Temperament,
Diseases: Measles? yes, Scarlatina? yes, Whooping Cough? yes, Vaccination? yes, Epilepsy?
" Hysteria? , Chorea? Pneumonia? yes. Diptheria? yes.
Diagnosis of, , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

P. G. F. living?
P. G. M. died at age of 90 years - cause unknown.
M. G. F. died at age of 50 years - cause - due to overstrain (?)
M. G. M. died at age of 59 years - cause - throat trouble (?)

DISCHARGED September 28. 1912 in care of her Mother. Improved.

Returned Mar 24, 1920

General Condition mature, stocky figure, well nourished.
Head 50½ cm well formed
Hair Black
Eyes Brown, react well
Ears Well formed
Nose negative
Teeth Pegged
Tongue Protrudes to right.
Tonsils
Pharynx Clean
Glandular negative
Operations Indicated sterilization
Diagnosis Rt spastic hemiplegia, with choreic movements; imbecile.
Left lower leg also spastic.

B.P. syst 118
Heart negative rate 68.
Lungs negative, rate 20 75½ - 82 5½ cm expansion
Abdominal negative
Pelvic No bimanual.
Genitals Much smegma, hymen intact clitoris free
Breasts well developed.
Vaccinated 3/27/20
Wasserman "
Hb 80%
Nervous system { Rt spastic hemiplegia athetoid movements of hands & feet.

Diseases: Measles? yes, Scarlatina? no, Whooping Cough? yes, Vaccination? No -, Epilepsy? yes for 4 yrs.
" Hysteria? , Chorea?
Diagnosis of, epilepsy - dementia, Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

No history of grand parents.
Child said to have had little care, as Mother was overworked, prior to Mother's death.
Since then has been cared for by a relative - Mrs. Schneider, who states that she had gone down rapidly in past few months -

Dec. 3rd '12 Admitted to hospital in stuporous condition - following spasm.

Dec. 5th Dr. Genung took charge of case and found the above condition. Patient remained in bed until time of death, Apr. 17th 1913, only rallying at intervals. Died of Broncho-pneumonia of seven days duration. Was very much emaciated and had many "pressure sores".

DIED April 17, 1913. Bronchopneumonia, following Epilepsy.
Buried Home cemetery

Reg. No., 2057, App. No., 1799, Admitted, October 9. 1912, Born, March 16. 1901, Birthplace, San Francisco, California.
Name, Irene C. Kresnahan, Color, white, Sex, female, Age, 11 years, 6 months, 23 days, Residence, San Francisco, Co., S. F.
Parentage: Father living, yes, ~~Dead~~, Occupation, laborer., Nationality, Irish., Age at birth of this child, 45 years,
" Mother " ", ", " housewife, " American, " " " 27 ",
Blood relationship of Parents, none., Conjugal relation,
Relatives or Ancestors similarly afflicted, "
" " otherwise afflicted, "
" " intemperate, "
Heriditary influences, seemingly good
Labor, ordinary, Delivery, at term - no instruments used
2nd child of Parents. Condition of other children, normal
Alleged Cause of Deficiency, congenital defect, Date of recognition, early in infancy.
Degree of deficiency at admission, imbecile, Abnormalities, Drools - holds mouth open.

Physical condition: General development, good, Skin,
Hair, , Sight, , Hearing,
Smell, , Taste, , Touch,
Heart action, etc., , Pulse, , Circulation,
Lung action, , Respiration per m., , Chest mea. inspr., in., expir., in., expan., in.
Tongue, , Teeth,
Menstruation: Regular? Irregular? Scanty?
" Painful? Peculiarities of, First menstruated at what age?
" Nervous and Mental Phenomena of,
Educational attainments at admission, none.
Locomotion, Can walk well: uses hand, Speech, , Temperament,
Diseases: Measles?, Scarlatina?, Whooping Cough?, Vaccination? no, Epilepsy? no
" Hysteria?, Chorea?
Diagnosis of, imbecile, Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS: M. G. M. died of paralysis at 52: history otherwise negative.

October 24, 1912. Although Irene's papers state that she has never had epilepsy, she had an undoubted epileptic seizure on October 20 - & was thought to have had one not observed by the attendant the night before. It is thought that the seizures have been called by some other name as "fits" or "spasms" & the word epilepsy was not understood. She is now graded as epileptic

DIED October 27th 1916 at 2.15 P. M. - Cause - Broncho - Pneumonia. Serial Epilepsy - Epilepsy -

Body Shipped to San Francisco, California - Buried in Holy Cross Cemetery.

Irene entered hospital Oct. 18th with epilepsy continued to have a series & from Oct 26 + 27 had 61 spasms - later developed Broncho - Pneumonia & failed rapidly - death occurring at 2.15 p. m Oct. 27th 1916 -

Reg. No., 2067, App. No., 1920, Admitted, Dec. 23rd 1912, Born, July 16th 1908, Birthplace, Ukiah, Cal.
Name, Margaret Scott, Color, White, Sex, female, Age, 4 years, 5 months, 7 days, Residence, Ukiah, Co., Mendocino,
Parentage: Father living, Living, Dead, , Occupation, Farmer. , Nationality, American, Age at birth of this child, 52.
" Mother " " L, " , " Housewife , " " , " " " 45½ yrs. ,
Blood relationship of Parents, None. , Conjugal relation,
Relatives or Ancestors similarly afflicted, No.
" " otherwise afflicted, Maternal grandmother died of enlargement of heart. Aged 76 yrs.
" " intemperate, Father chewed tobacco.
Heriditary influences, Seemingly good - Except mother was very nervous during pregnancy.
Labor, Very easy. , Delivery, At term. No instruments used. twin
3 child of Parents. Condition of other children, Both dead. (One died 36 hrs after birth. The other at 4 mo. from cholera infan
Alleged Cause of Deficiency, Congenital defect. , Date of recognition, Apparently at birth.
Degree of deficiency at admission, Idio-imbicile , Abnormalities, ~~none~~ {Except under size. Head flat posteriorly.}

Physical condition: General development, Very small for age. Head small. Flat on Occiput. Skin, Clean.
Hair, Brown , Sight, Good , Hearing, Good.
Smell, — ? , Taste, — ? , Touch, — ?
Heart action, etc., Good. , Pulse, Rapid 108 , Circulation, —
Lung action, " , Respiration per m., Perfect. 20 Chest mea. ~~inspr.~~, 26 in., expir., Impossible to get it. in., expan., in.
Tongue, Rather broad and thick. Clean. , Teeth, Good.
Menstruation: Regular? — — Irregular? — Scanty? —
" Painful? — — Peculiarities of, Cannot walk. nor talk First menstruated at what age? —
" Nervous and Mental Phenomena of, —
Educational attainments at admission, None.
Locomotion, None , Speech, None , Temperament, Very good - not nervous.
Diseases: Measles? No , Scarlatina? No , Whooping Cough? No , Vaccination? No , Epilepsy? No
" Hysteria? No. , Chorea? No
Diagnosis of, Idiot. Mongolian type. , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

There is no further history or remarks - except that the child sits all day and not in any "aroused" from her stupid condition.

Apr. 20th Admitted to hospital - with gastero-intestinal toxemia.
Dismissed from hospital

Reflexes. Pupils react to light. Other reflexes normal.

Wassermann.

Margaret Scott has walked alone for sometime now - Is brighter, happy & contented

August 9th 1917 - Sent to Isolation Hospital c Scarlet Fever -

Reg. No., 2069 , App. No., , Admitted, Jan. 15th 1913. , Born, Nov. 16 - 1894 , Birthplace, San Francisco.
Name, Viola Drushy , Color, White , Sex, Female , Age, 17 years, 11 months, days, Residence, 582 Castro St. S. F., Co.,
Parentage: Father living, , Dead, Dead, Occupation, Coal-passer , Nationality, American , Age at birth of this child, 34 ,

" Painful? No Peculiarities of, Only that she is cross and quarrelsome First menstruated at what age? ?
" Nervous and Mental Phenomena of, Inclined to be nervous.
Educational attainments at admission, 4th grade-grammar.
Locomotion, Poor , Speech, Does not pronounce distinctly. Very slow., Temperament, Nervous. Quarrelsome.
Diseases: Measles? Yes. , Scarlatina? , Whooping Cough? Yes. , Vaccination? Yes. , Epilepsy? no.
" Hysteria? No , Chorea?
Diagnosis of, , Examiner, as to grade, complications, etc, Feeble-minded.

GENERAL HISTORY AND REMARKS:

Wassermann. Reflexes, normal.

All dead.
(Father - suicide. 40 yrs of age.
Mother - died of tuberculosis at 38 yrs. of age.
P. G. F. "Senility." At 80 yrs of age.
P. G. M. Cerebral Hemorrhage at 60 yrs.
M. G. M. Bronchitis (?) " 60 "
M. G. F. Pneumonia " 70 "

(One of patient's sisters died in convulsions age 4 yrs)

Tonsillotomy and adenoids removed - at Children's Hospital, S. F. before coming here. "At age of twelve had swollen knee joint supposed to be tuberculous, but recovered in three months. Dr M.O. Austin (per G.)

XRay taken Oct. 19 - 1913.

Operated Nov. 16, 1920 by Dr. Butler
1. Double partial salpingectomy for sterilization
2. Right cystic ovary incised

Reg. No., 2138, App. No., 1855, Admitted, April 23rd 1913. Born, Jan. 29th 1894, Birthplace, Garberville, Cal.
Name, Ethel Chadbourn, Color, White, Sex, Female, Age, 17 years, 10 months, days, Residence, Sheldon, Cal., Co.,
Parentage: Father living, Yes., Dead, , Occupation, Blacksmith, Nationality, American, Age at birth of this child, 30 yrs.,
" Mother " Yes, " , " Housewife, " ", " " " 19 ",
Blood relationship of Parents, none, Conjugal relation,
Relatives or Ancestors similarly afflicted,
" " otherwise afflicted,
" " intemperate,
Heriditary influences,
Labor, Full-term., Delivery, Difficult.
first child of Parents. Condition of other children,
Alleged Cause of Deficiency, Brain-fever following a fall - 3 yrs of age., Date of recognition, 3 yrs.
Degree of deficiency at admission, F. M. Epileptic., Abnormalities, none.

Physical condition: General development, Rather thin and tall., Skin, Pimples on face. Few old scars.
Hair, Light brown., Sight, Perfect., Hearing, Good
Smell, Good, Taste, Perfect., Touch, Good.
Heart action, etc., Good, Pulse, 78, Circulation, good
Lung action, ", Respiration per m., 18, Chest mea. inspr., 34′ in., expir., 31′ in., expan., in.
Tongue, Coated - especially heavy on edges., Teeth, Very poor molars.
Menstruation: Regular? Yes. Irregular? - Scanty? ?
" Painful? Slight Peculiarities of, First menstruated at what age? ?
" Nervous and Mental Phenomena of, Nervous all the time
Educational attainments at admission, Second reader. Said to play piano. Can do little needle-work. Sweeps and washes dishes.
Locomotion, Normal., Speech, Good. Little slow., Temperament, Nervous at times
Diseases: Measles? Yes., Scarlatina? No, Whooping Cough? No, Vaccination? No, Epilepsy? Yes.
" Hysteria?, Chorea? No
Diagnosis of, F. M. Epileptic, Examiner, as to grade, complications, etc, Feeble minded.

GENERAL HISTORY AND REMARKS:

Reflexes. Pupils sluggish. Other reflexes normal.
Wassermann

P. G. M. Dead. Cause of death unknown.

Patient had a fall with subsequent brain fever. (History does not give date.)

Third child of Parents. Condition of other children,
Alleged Cause of Deficiency, ? , Date of recognition, Two yrs of age.
Degree of deficiency at admission, F. M. , Abnormalities, Small head. Stooped Shoulders.

Physical condition: General development, Well developed. , Skin, Normal.
Hair, Normal , Sight, Good , Hearing, Normal.
Smell, Apparently normal , Taste, normal. , Touch, Normal.
Heart action, etc., Good. (Little excited when examined , Pulse, 90 , Circulation, Good
Lung action, Normal , Respiration per m., 20 , Chest mea. ~~inspr.~~, 25 in., expir., Impossible to get in., expan., in.
Tongue, Normal. , Teeth, Good
Menstruation: Regular? Too young Irregular? — Scanty? —
" Painful? Too " Peculiarities of, — First menstruated at what age? —
" Nervous and Mental Phenomena of,
Educational attainments at admission, None.
Locomotion, Good. , Speech, Says few words. , Temperament, Quiet.
Diseases: Measles? , Scarlatina? , Whooping Cough? , Vaccination? , Epilepsy?
" Hysteria? , Chorea?
Diagnosis of, F. M. , Examiner, as to grade, complications, etc,

GENERAL HISTORY AND REMARKS:

Mother died of tuberculosis at age of 25.
P. G. F. Dead. Cause - inflam. of bowels. Age. 68.
P. G. M. Living
M. G. F. Dead. " "Brights disease." " 50.
M. G. M. Living.

Reflexes normal.
Wassermann

December 11th 1912. Was sent to hospital for observation & held for diagnosis until February 14-1915 - where she developed a Broncho-Pneumonia - was exposed to Measles which developed in the ward. Had a slight eruption Feb. 18th - & was covered c Measles Feb. 21-1915 - Exfoliation prolonged & very slow - March 18th-1915 diagnosis of Pulmonary Tuberculosis made..

DIED March 30th 1915 at 8.30 p.m. - Diagnosis. Acute General Miliary Tuberculosis.

March 31st-1915 -
Autopsy held 14 hours after death. Emaciation marked. Rigor mortis moderate. Adipose moderate in abdominal wall. Bronchial Glands moderately enlarged. Considerable pus from large left bronchi.

Lungs. No fluid in cavity.
Right L. Weight 16 ozs. No adhesions. Tubercles scattered over entire lung. On section - entire lung studded with tubercles.
Left L. Weight 15 ozs. Fresh adhesions to left & anterior surface. Tubercles scattered over entire surface, On section, entire lung studded with tubercle.

Heart. Excess of pericardial fluid. Weight 16 ozs.
Aorta & its valves slightly hyperaemic.
Clot in right ventricle, partly organized.

Liver. Weight 31 ozs. Studded with tubercles. On section, tubercles scattered through-out liver substance or tissue.

Kidneys. Capsules strip readily.
Rt. Kidney. weight 3 ozs. tubercles over surface. On section, tubercles through-out.
Lt. " 4 ozs. " " " " "

Spleen. Weight 4 ozs. Tubercles in surface & scattered through out, on section.

Inferior surf of diaphragm covered with tubercles.

Mesentery glands moderately enlarged, but not broken down.

Intestines. Diverticulum about 3 ft. above Caecum - ulcers in Caecum - multiple small ulcers throughout large intestine.
Uterus & ovaries normal.

Stomach. Mucous membrane injected - One small ulcer & several beginning ones on posterior surface.

No 2149 see page 63. Book 3.

Reg. No., 2147, App. No., 2026, Admitted, May 6th 1913., Born, June 15 - 1898., Birthplace, Lihue, Kauai Hawaiian Is.
Name, Olinda Martin, Color, White, Sex, Female, Age, 14 years, 6 months, days, Residence, Oakland, Co., ,

P. G. F. Pneumonia }
P. G. M. ~~Living~~ } Cause of death.
M. G. F. Accident }
M. G. M. Operation }

Reflexes exaggerated. Pupils react normally. No Babinski nor Ankle Clonus.
Wassermann

DISCHARGED 24th Dec. 1913 - Refused on parole since Oct. 1-1913. Request of Mother.

Re Admitted Feb. 13, 1919 Wasserman 2/14/19 neg

Physical Examination on admission

General development - good

Head - 21 3/4 in
Eyes - Blue - React to L. & A
Vision - normal
Ears - "
Hearing - "
Nose "
Teeth Poor
Tongue Clear
Tonsils normal
Pharynx "
Glandular system Inguinal slightly enlarged
Heart normal
Lungs "
Urinalysis
Blood Pressure 120 - 84
Operations Indicated none
Diagnosis Imbecile - M. G. Epileptic

Abdominal organs normal
Genitals "
Pelvic organs "
Breasts "
Muscular System "
Osseous " "
Nervous " "
Reflexes - "
Sensation "
Skin - acne on chest & back
Extremities - Brown discoloration on rt. buttock
- Pulse - 92 - Circulation - Fair
Resp. per. min. 16. Chest mea., inspir 31 1/2 in - Expir, 29 in. Expan. 2 1/2 in
Hemoglobin 80.

Stigmata - None
Abnormalities - Brown discoloration on rt. buttock.
Vaccination Feb. 14, 1919 successful

Mildred E. Thoren M. D.

Operated Oct. 26 - 1920 by Dr. Thurlow
1. Double partial salpingectomy for sterilization
